Chief Clerk Gharis,

Please find the enclosed resolution as a formal request for Public Meeting regarding Proposed Permit Number WQ0016046001. This request is submitted by the City Council of the City of Richwood on behalf of all citizens who live along and recreationally enjoy the Bastrop Bayou.

K. Garcia

Kirsten Garcia, City Secretary

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF RICHWOOD, TEXAS:

that the City Council of the City of Richwood respectfully requests that the Texas Commission on Environmental Quality hold a public meeting on Proposed Permit Number WQ0016046001 and that a copy of this resolution be sent to the Texas Commission on Environmental Quality, Office of the Chief Clerk.

AND SO, IT IS RESOLVED.

PASSED AND APPROVED on this 22nd day of April 2022.

Steve Boykin, Mayor

COMMENTS: I am the Mayor of the City of Richwood, Texas, a city which has concerns regarding the discharge of wastewater into Bastrop Bayou, a tidal stream, as proposed in Water Quality Permit Number WQ0016046001. The City of Richwood is requesting that TCEQ hold a Public Meeting on this application in an effort to present/discuss the concerns of our city, it's citizens and others who may have questions regarding the downstream effects on this sensitive waterbody resultant from this discharge.

I am required to treat my wastewater and maintain a permit with the TCEQ. This water is treated on my own property. Why are these property owners not
(Written comments may be submitted at any time during the meeting)

Please give this form to the person at the information table. Thank you.

required to do the same? →

→ Bastrop Bayou already cannot handle the water that is being diverted to it. My question: We are told that the limit is 250,000 gal/day on average. Over what time period is this average calculated? I believe that it was also mentioned that the maximum is four times that in two hours, 500,000 gal/hr. How will that impact our neighborhoods during a flood event?

I realize that flooding is not the jurisdiction of the TCEQ, unfortunately, we have no other forum in which to raise this issue.

Question, ~~why~~ I have not seen any studies to evaluate the flood impact. Who's responsibility is this?

COMMENTS: I believe that the dumping of waste water into Bastrop Bayou will make a negative impact on me and everyone else along the bayou. It would destroy the the brackish mixture further pushing saltwater species away from my location and others. The possibility of flooding is greater because of the large amount of water that would be dumped daily into the bayou. There is no direct flow to the gulf so much of this waste water may never leave the bayou.

I as well as others had to spend a large amount of money to contain our cleaned waste water and so should commercial properties. It's sad to think that 250K of waste water being dumped daily may being regulated properly.

COMMENTS: I protest the allowance of the dumping of waste water into Bastrop Bayou by a proposed mobile home park. Over the years Bastrop Bayou has become the go-to waterway for dumping any and all kind of water. In fact we have multiple cities diverting their flood water into our bayou, this causing nasty water and a much higher risk of flooding.

COMMENTS: PLEASE SEE ATTACHED.

Reference: Undine application to the TCEQ for a permit to discharge processed wastewater into Bastrop Bayou in Brazoria County.

Dear Sirs.

My name is Richard Elliott. I am a resident of the Demi-John community on Bastrop Bayou. I am also a board member and the general manager for Brazoria County Fresh Water Supply District #2. I am writing this letter* to you on behalf of our small community. I want to make sure you are aware of the TCEQ's role in our community regarding the creation of the county Water District, the resulting property taxes, and the ongoing burden to operate a sewage collection system as required to comply with the TCEQ mandates regarding the elimination of onsite septic system (OSSS) in our community.

Around 2007/2008 the county health dept reported a case of E.coli associated with failed and/or failing on site sewer systems (OSSS) in the community. Shortly thereafter a community wide testing effort of the OSSS's was completed by the county and the results were provided to the TCEQ. Failure rates were determined to be unacceptable and the TCEQ put the county and community on legal/formal notice that some sort of solution was going to be needed to avoid a lawsuit and/or closure of the community.

As a result of the TCEQ's notice the Brazoria County district Attorney and residents started working closely with the USDA to obtain grant money sufficient to design and build a local community wastewater collection system that would allow the community to eliminate the use of OSSS's. This took many years and thousands of man-hours to finalize. In 2016 the grant was approved. The grant was insufficient to cover the complete cost of the project. The community was forced to borrow almost \$2,000,000 more dollars in the form of a bond sale to fund the project. To repay the bonds the district was required to implement a property tax.

Every property owner in our community is paying an additional property tax for no other reason than to repay the bonds required to fund the implementation of the local sewer collection system mandated by the TCEQ.

The health of Bastrop Bayou was at that time, more important to TCEQ than the survival of our community. To be clear the community is grateful for the grant and bond money, and the patience of the TCEQ. Today we are very proud of our sewer system. That being said, the community is also in significant debt and will be collecting property taxes for another 25 years to pay for the improvement. The cost of day-to-day operations of the sewer system is also a burden to our small community as it is shared by only 232 customers. Finally, the community is contracted to the city of Oyster Creek for the processing of our wastewater, an additional cost that must be passed on to the small number of customers.

Clearly, the TCEQ has demonstrated its authority and resolve in protecting the pristine nature of Bastrop Bayou. In our case almost \$6,000,000 was spent by federal and local governments to ensure compliance to TCEQ mandates.

The community understands that the application to discharge processed wastewater into Bastrop Bayou is required to go through the mandated TCEQ process, and that the TCEQ is limited in its authority to act on the behalf of the citizens to those powers provide to it by state. Regardless, the community has a tremendous, long term financial burden related directly to the TCEQ's previous actions focused on the water quality of Bastrop Bayou.

The community also believes the impact studies provide by Undine are incredibly short of what is required to accurately understand the negative impact to the bayou that this permit would have. We believe the tidal nature of our bayou makes it impossible to determine the true impact with anything less than a long-term study that includes analysis of the impact at different times of the year, during different tide scenarios and during local flooding. Both rain events and storm tide events when the water way is used to carry water in both directions, inland and then into to the bayou and eventually the bay. The study provided by Undine may satisfy the requirements of the TCEQ for an application, but it is not, in any way, sufficient to provide the necessary and important information the TCEQ must have to make an informed decision regarding the permits real impact on Bastrop Bayou.

Approval of the Undine permit would reflect a complete and total reversal of priorities at the TCEQ. I would add that other communities who could or should seek USDA grant money for the same reasons would find it much more difficult in Texas due to the likelihood that the communities gains would be offset by even greater losses related to the TCEQ policy of approving unwanted, poorly studied, and environmentally destructive drainage permits.

Please deny the Undine permit. The community it will service does not even exist and is not wanted. The county and affected cities do not support this development. Other better suited options exist. The Undine permit is simply aimed at implementing the cheapest solution, with profits being at the core of the permit. We believe the TCEQ has the mandate and authority to require Undine to seek other more environmentally correct solutions that the county and affected communities can support.

Thank You.

Richard Elliott

*A similar letter/comment was provided to the TCEQ at the public comment meeting held last month. Please consider this an update to that request for a response.

I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)
Please give this form to the person at the information table. Thank you.

IN 2017 The Community of Dem-John was
FORCED to ~~raise~~ 72 million Dollars INCREASE
to pay for the INSULATION of A Community
SEWER SEWER. These Residents will be PAYING
FOR THE BONDS till 2055. The DRIVE for
for this Action was A Threat to close the
Neighborhood Down AS IT WAS HAVING AN
IMPACT on WATER QUALITY. The TCEQ WAS
the entity Forcing the Community to DO
this, AS IT IS their Job to INSURE the
Water Quality of BASKED BAYOU. Will the
TCEQ be PAYING off the BONDS since there
IS NO longer ANY Desire to protect the
Water Quality of the Bayou.

Richard Elliot

COMMENTS: We own a home on Bastrop Bayou. The proposed sewage treatment plant will limit the tidal flow at our location by the volume of fresh water permitted. This will have a negative effect on night fishing at our location. In addition, Undine Texas LLC has a bad reputation for drinking water treatment. They do not follow Texas law. They post boil water notices and list the required phone number to call for more information; however, they will not allow a person to speak with Mr. John Wittenzellner, nor will he call you back. When speaking with his secretary her response is

"I will give him the message." In addition, they do not follow Texas law with regard to depressured mains. They allow customers to drink the water immediately after the system is repressured. Based on Undine's history of not following the law, I respectfully request that you turn down this permit request.

I wish to provide formal **WRITTEN COMMENTS** at tonight's public meeting.

I have lived on Bastrop Bayou for 50 yrs. ~~I live~~
The canal is behind my house that leads into
the Bayou. my property is elevated to a certain high
but ~~we~~ has been taken little by bit when it floods

(Written comments may be submitted at any time during the meeting)
Please give this form to the person at the information table. Thank you.

If all this water that you will let into
Bayou will flood my house for the first time
I am very against ~~the~~ this and how it will
effect the bayou and everyone that lives there
and all the fish and people that swim.

Subject: Opposition to TCEQ Permit #WQ0016046001

Hello,

The purpose of this letter is to express my opposition to the TCEQ Application for Permit Number WQ001604001. The proposed wastewater treatment plant is to be built and operated by Udine and has the potential to introduce harmful contaminants into the Bastrop Bayou Watershed.

As a resident of Brazoria County who lives on Bastrop Bayou it is hard to believe this is even being considered for permit given the ecosystems supported by this watershed. They range from old growth hardwood bottomlands near the

location where the effluent will enter the bayou itself to the Galveston Bay System. Two very distinct ecosystems all connected and supported by Bastrop Bayou. Brazoria County has a history of being the area with the highest bird count during the annual national event. I am not a biologist but as an avid outdoorsman I think the diversity of habitats like this is one of the reasons that make this possible.

I attended the recent meeting with TCEQ and Udine at the Brazoria County Fairgrounds and spoke in opposition to the proposed facility. **We were assured we would receive answers to our questions and concerns and are still awaiting those at this time. My question is why can't the treated effluent be contained on the property by dumping into a retention pond? If the effluent is safe for Bastrop Bayou it stands to reason that it could be used for aesthetics and possibly irrigation on the property where it originates.**

Please assist in our efforts as residents and voters to prevent the issuing of Permit Number WQ0016046001. The potential negative environmental impact alone is reason enough to deny the application but when combined with the impact on residents' lifestyles and investments due to living on a contaminated waterway it is completely unacceptable. I greatly appreciate any assistance, please forward this email to anyone who may be able to further assist and feel free to contact me with any questions or concerns.

Respectfully,

Marcus Jones

RE: TPDES Permit No. WQ0016046001

Dear Chief Clerk Gharis:

As the Brazoria County Precinct 4 Commissioner, covering south and west Brazoria County, I am requesting a public meeting regarding Permit No. WQ0016046001 to learn more about the application, ask questions of the applicant and provide the public ample opportunity to submit comments on the application from Undine Texas Environmental, LLC. I understand the permit is for a new Texas Pollutant Discharge Elimination System, to authorize the discharge of treated domestic wastewater in Bastrop Bayou for a mobile home park known as The Reserve in Angleton. This development would be located in my precinct.

The proposed system would emit up to 250,000 gallons of treated wastewater per day and serve approximately 300 mobile homes in the first phase of the park. The total size of the park would be approximately 800 mobile homes. This would place the sewage treatment for a community the size of a small city in the hands of a private entity. Even if the current developer diligently operates and maintains the wastewater treatment system, there is no guarantee that subsequent purchasers would do the same. In the event of a malfunction, the potential for 250,000 gallons per day of untreated sewage emptying into the bayou is very concerning. When private entities take on traditional public utility functions I believe an additional layer of scrutiny is necessary to ensure the public safety.

Furthermore, many of the residents on Bastrop Bayou have significant concerns regarding this permit application and the potential impacts on the salinity regime of this brackish water system, and as a result, impacts any changes in salinity will have on aquatic species within the bayou.

Should you have any questions, please do not hesitate to contact me at 979-345-1130.

Sincerely,

David Linder, County Commissioner

COMMENTS: We the people that live on Bastrop Bayou do not need or want anymore drainage or runoff be it clean or dirty going to Bastrop Bayou. There is already to much concrete taking over our land here in Brazoria County and I have noticed over the past 30 plus years the increase of runoff/drainage in Bastrop Bayou which in my opinion has caused a lot of silt buildup along with dirtier water over the years along with a increase in flooding when storms come. We have flooded more in the past 18 years than I have ever seen since living here since 1979. Like I said before, we don't need

anymore drainage, runoff or dumping of clean waist water in Bastrop Bayou. We also use to never have scum lines coming down the bayou in the past, but now we do. Too much polluted runoff in my opinion which is not good for our environment, fish, birds, people, etc...

COMMENTS: A meeting needs to be held in order to discuss this matter urgently. Dumping 250,000 gallons of "treated" water into Bastrop Bayou daily will have a huge negative impact on the community that resides on this bayou, but more importantly, it will destroy the natural ecosystem of this bayou. This is absolutely wrong and the people deserve to voice their concerns on this matter in a formal meeting.

COMMENTS: I understand that this project does not seem in any way an issue to some, but to the citizens of Brazoria County who live on Bastrop Bayou, and those who enjoy this beautiful recreational resource this is an issue. Our children, families and friends frequently swim, fish, water ski, and hunt this natural resource. To put water that has been chemically treated into this water system can effect not only the citizens who partake in pleasures this natural resource

provides but it also can effect the wild life, fish, and natural habitats and wetlands. Please take this into consideration beforew proceesing forward with this project.

I wish to provide formal *ORAL COMMENTS* at tonight's public meeting.

I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

Is there a different location the waste water treatment plant could be located where fewer house would be impacted? Re Is there a way for the "used water" to moved to farther down the Bayou?

(Written comments may be submitted at any time during the meeting)
Please give this form to the person at the information table. Thank you.
a way for the "used water" to moved to

David Polasek dppola@gmail.com

I am 4th generation on the bayou.
There has been a landfill built
south of the bayou that reeks
everytime a south wind blows.

Additional drainage during
Harvey deposited 2' of
silt against our property.

Now there is a request
to discharge effluent into the
bayou. Its been a slow
struggle and it needs to
stop.

TCEQ has not been able to
satisfactorily resolve the landfill
odor after years of complaints.
Why should we believe they will
handle this any better?

I wish to provide formal *ORAL COMMENTS* at tonight's public meeting.

I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

1.) I would like to hear feedback (hopefully from our county agencies) about the health aspects and dangers of allowing this effluent to be carried through open drainage districts. They should be included and have a vote in this issue

(Written comments may be submitted at any time during the meeting)

Please give this form to the person at the information table. Thank you.

2) Drainage / flow capacity of Bastrop Bayou should be covered

2. (cont)

be taken into consideration. Many homes flooded during hurricane Harvey. Lake Jackson already pumps rain water and flood waters to Bastrop Bayou.

3. Texas Parks and Wildlife should be involved in decision making and studies to consider impact on fish and wildlife.

COMMENTS: As owners of home and real estate property along the Bastrop Bayou we are totally against the outflow of 250,000 gallons of treated waste water into the bayou ... we are unaware of any advantages to landowners downstream of this facility ... The bayou is extremely silted and is need of dredging to allow what extra flow we already receive from upstream during high rain periods ... It is certainly not capable of handling this type of outfall during those conditions as owners property will be flooded ...

COMMENTS: I would like to request a public meeting on this proposed dumping of 250,000 gallons of "clean water" into Bastrop Bayou. This would give the City of Angleton, Brazoria County, and TECQ the opportunity to explain how this will not effect the ecosystem (saltwater fish and animals that live in the bayou). Bastrop Bayou is also a recreational waterway that is used for fishing and skiing. It will also help surrounding municipalities be aware and prepare for more

water is being diverted into the bayou to help with flood mitigation. This needs to be publicly discussed and all information be presented.

Subject: TCEQ Permit-Opposition-250,000 gal. per day Domestic Waste Water Dump
Attachments: TECQ Opposition.pdf

Hello everyone,

No last note before the meeting today at Fairgrounds 6:00 pm. I went to Angleton Library yesterday to review the "preliminary decision and draft permit" the TECQ has available for public. Ninety-nine-point nine/nine percent of it was too technical for my interpretation. However, I have attached areas of the so-called preliminary decision that concerned me deeply. On page two of attachment, you will see words in their report like "no significant degradation of water quality", "is not expected to have effect". These terms to me indicated EXTREME weakness in their research and bureaucratic double talk to cover up for any unexpected negative effect on our eco system. I am no bird expert; however, I do think we have a substantial population of the "Piping Plover" in our bay eco system that is feed by Bastrop Bayou, which they are so concerned about. Page 3 tells us clearly, they are going to introduce E. coli, ammonia-nitrogen, suspended solids, chlorine and ETC. Permittee must restrict residential structures in buffer zone. That does not sound an environmentally friendly activity or discharge to me. Then you will see approval of Angleton Drainage District and no approval from Angleton City Council. I spoke with the realtor that was involved in the sale of this site and he presently still owns sizeable tract across FM-220 from subject property. There exist water and sewer at this location. Simple solution is work something out with City of Angleton.

This sounds and looks very political to me. Rules for you but not for me.

Septic systems require a lot of hoops to jump thru to get a residential sewer system approved and is not allowed to discharge into bayou. However, a developer is asking to dump 250,000 gallons per day of domestic waste water into Bastrop Bayou that many, many citizens of Brazoria County fish, boat and some swim in!

See you all, thank you all so much for being interested in doing the right thing and trying to save our natural resources.----bill

Outfall Location:

<u>Outfall Number</u>	<u>Latitude</u>	<u>Longitude</u>
001	29.118454 N	95.437935 W

The treated effluent will be discharged via pipe to Angleton Drainage District Ditch 7, thence to Angleton Drainage District Ditch 22, thence to Bastrop Bayou Tidal in Segment No. 1105 of the San Jacinto-Brazos Coastal Basin. The unclassified receiving water uses are minimal aquatic life use for Angleton Drainage District Ditch 7 and Angleton Drainage District Ditch 22 (non-tidal) and high aquatic life use for Angleton Drainage District Ditch 22 (tidal). The designated uses for Segment No. 1105 are primary contact recreation and high aquatic life use. The effluent limitations in the draft permit will maintain and protect the existing instream uses. In accordance with 30 TAC §307.5 and the TCEQ implementation procedures (June 2010) for the Texas Surface Water Quality Standards, an antidegradation review of the receiving waters was performed. A Tier 1 antidegradation review has preliminarily determined that existing water quality uses will not be impaired by this permit action. Numerical and narrative criteria to protect existing uses will be maintained. A Tier 2 review has preliminarily determined that no significant degradation of water quality is expected in Angleton Drainage District Ditch 22's tidal reach and Bastrop Bayou Tidal, which have been identified as having high aquatic life use. Existing uses will be maintained and protected. The preliminary determination can be reexamined and may be modified if new information is received.

Effluent limitations for the conventional effluent parameters (i.e., Five-Day Biochemical Oxygen Demand or Five-Day Carbonaceous Biochemical Oxygen Demand, Ammonia Nitrogen, etc.) are based on stream standards and waste load allocations for water-quality limited streams as established in the Texas Surface Water Quality Standards (TSWQS) and the State of Texas Water Quality Management Plan (WQMP).

In a case such as this, end-of-pipe compliance with pH limits between 6.0 and 9.0 standard units reasonably assures instream compliance with the TSWQS for pH when the discharge authorized is from a minor facility. This technology-based approach reasonably assures instream compliance with TSWQS criteria due to the relatively smaller discharge volumes authorized by these permits. This conservative assumption is based on TCEQ sampling conducted throughout the state which indicates that instream buffering quickly restores pH levels to ambient conditions. Similarly, this approach has been historically applied within EPA issued NPDES general permits where technology-based pH limits were established to be protective of water quality criteria.

The effluent limits recommended above have been reviewed for consistency with the WQMP. The proposed limits are not contained in the approved WQMP. However, these limits will be included in the next WQMP update.

The discharge from this permit action is not expected to have an effect on any federal endangered or threatened aquatic or aquatic dependent species or proposed species or their critical habitat. This determination is based on the United States Fish and Wildlife Service's (USFWS) biological opinion on the State of Texas authorization of the TPDES (September 14, 1998; October 21, 1998 update). To make this determination for TPDES permits, TCEQ and EPA only considered aquatic or aquatic dependent species occurring in watersheds of critical concern or high priority as listed in Appendix A of the USFWS biological opinion. Though the piping plover, *Charadrius melodus* Ord, can occur in Brazoria County, the county is north of Copano Bay and not a watershed of high priority per Appendix A of the biological opinion. The determination is subject to reevaluation due to subsequent updates or amendments to the biological opinion. The permit does not require EPA review with respect to the presence of endangered or threatened species.

Segment No. 1105 is currently listed on the state's inventory of impaired and threatened waters (the 2020 CWA § 303(d) list). The list is for bacteria in water from the confluence with Bastrop Bay 1.1 km (0.7 mi) downstream of the Intracoastal Waterway in Brazoria County to a point 8.6 km (5.3 mi) upstream of Business 288 at Lake Jackson in Brazoria County (AU 1105_01). This facility is designed to provide adequate disinfection and, when operated properly, should not add to the bacterial impairment of the segment. In addition, in order to ensure that the proposed discharge meets the stream bacterial standard, an effluent limitation of 126 colony-forming units (CFU) or most probable number (MPN) of *Escherichia coli* (*E. coli*) per 100 ml has been added to the draft permit.

SUMMARY OF EFFLUENT DATA

Self-reporting data is not available since the facility is not in operation.

DRAFT PERMIT CONDITIONS

The draft permit authorizes a discharge of treated domestic wastewater at an Interim I volume not to exceed a daily average flow of 0.0625 MGD, an Interim II volume not to exceed a daily average flow of 0.125 MGD, and a Final volume not to exceed a daily average flow of 0.250 MGD.

The effluent limitations in the draft permit, based on a 30-day average, are 10 mg/l five-day carbonaceous biochemical oxygen demand (CBOD₅), 15 mg/l total suspended solids (TSS), 3 mg/l ammonia-nitrogen (NH₃-N), 126 CFU or MPN of *E. coli* per 100 ml, and 4.0 mg/l minimum dissolved oxygen (DO). The effluent shall contain a total chlorine residual of at least 1.0 mg/l and shall not exceed a total chlorine residual of 4.0 mg/l after a detention time of at least 20 minutes based on peak flow.

The draft permit includes a requirement for the permittee to obtain legal restrictions prohibiting residential structures within the part of the buffer zone not owned by the permittee according to 30 TAC § 309.13(e)(3).

The draft permit includes Sludge Provisions according to the requirements of 30 TAC Chapter 312, Sludge Use, Disposal, and Transportation. Sludge generated from the treatment facility is hauled by a registered transporter to Mount Houston Road MUD Wastewater Treatment Facilities, Permit Nos. WQ001154001, to be digested, dewatered, and then disposed of with the bulk of the sludge from the plant accepting the sludge. The draft permit also authorizes the disposal of sludge at a TCEQ-authorized land application site, co-disposal landfill, wastewater treatment facility, or facility that further processes sludge.

SUMMARY OF CHANGES FROM APPLICATION

The applicant requested effluent limitations, based on a 30-day average of 10 mg/l CBOD₅, 15 mg/l TSS, 3 mg/l NH₃-N, 126 CFU or MPN of *E. coli* per 100 ml and 2.0 mg/l minimum DO in all phases of the draft permit. The effluent limitations in all phases of the draft permit, based on a 30-day average, are 10 mg/l (C)BOD₅, 15 mg/l TSS, 3 mg/l NH₃-N, 126 CFU or MPN of *E. coli* per 100 ml and 4.0 mg/l minimum DO.

BASIS FOR DRAFT PERMIT

The following items were considered in developing the draft permit:

1. Application received on September 24, 2021, and additional information received on November 1, 2021 and January 3, 2022.

Attachment: N/A

F. Owner of sewage sludge disposal site (if authorization is requested for sludge disposal on property owned or controlled by the applicant):

Prefix (Mr., Ms., Miss): N/A

First and Last Name: N/A

Mailing Address: N/A

City, State, Zip Code: N/A

Phone No.: N/A

E-mail Address: N/A

If the landowner is not the same person as the facility owner or co-applicant, attach a lease agreement or deed recorded easement. See instructions.

Attachment: N/A

Section 10. TPDES Discharge Information (Instructions Page 34)

A. Is the wastewater treatment facility location in the existing permit accurate?

Yes No

If no, or a new permit application, please give an accurate description:

The facility will be located approximately 2900' SW of the intersection of County Road 220 and Old Angleton Road.

B. Are the point(s) of discharge and the discharge route(s) in the existing permit correct?

Yes No

If no, or a new or amendment permit application, provide an accurate description of the point of discharge and the discharge route to the nearest classified segment as defined in 30 TAC Chapter 307:

The plant will discharge treated effluent through an 18-inch pipe to Angleton Drainage District Ditch 7, thence to Ditch 22, and finally to Bastrop Bayou (segment #1105).

City nearest the outfall(s): Angleton

County in which the outfalls(s) is/are located: Brazoria

Outfall Latitude: 29 DEG 7' 6.41" N

Longitude: 95 DEG 26' 16.57" W

C. Is or will the treated wastewater discharge to a city, county, or state highway right-of-way, or a flood control district drainage ditch?

Yes No

If yes, indicate by a check mark if:

Re: The Reserve at Angleton
Effluent Discharge into 7 Ditch

To whom it may concern:

The Angleton Drainage District Board met on August 10, 2021 and approved the discharge of treated wastewater effluent into Ditch 7 which will serve the The Reserve at Angleton Subdivision in Brazoria County, Texas. The actual discharge outfall structure shall be submitted for approval to the District prior to construction of the outfall as a requirement of the approval.

Sincerely,

David B. Spoor, Chairman
Angleton Drainage District

July 1, 2021

Mr. Aaron Ketchand
Hollgan Communities, Inc.
14114 N. Dallas Parkway, Suite 265
Dallas, TX 75254

RE: The Reserve Construction Plans

Dear Mr. Ketchand,

As you are aware, the Angleton City Council did not approve the proposed utility agreement for the Reserve. City water and sewer service are no longer being provided to the property and the project. As a result, the construction plans, approved on the basis of connecting to City water and sewer service, are no longer valid and need to be revised and approved by the City Engineer prior to recording of any final plat as set forth in Section 23-15.A.3 of the Land Development Code.

Assuming that the project will now use a well or non-public water system to supply water to the project and an On-Site Sewerage Facility (OSSF) for wastewater treatment, the requirements of Sections 23-15.B.4.b (water service) and 23-15.C and 23-15.D.2 (wastewater) would apply. Feel free to contact the City Engineer regarding submittal requirements for review of revised plans and any other documentation the City Engineer might need to complete the review.

Ecologically Significant River and Stream Segments

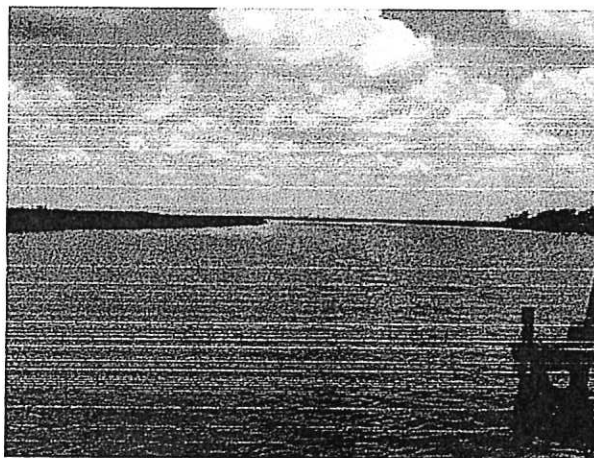

Bastrop Bayou

Figure 6. Map Location of Bastrop Bayou

Adapted from USGS Houston, Texas, 1975. Original scale 1:250,000

Figure 7. Bastrop Bayou west of FM 523

Bastrop Bayou

Bastrop Bayou is a scenic coastal waterway fringed by extensive freshwater wetland habitat. The bayou rises in the central part of Brazoria County and flows deeply in a southeasterly direction for 13 miles where it empties into Austin Bayou and ultimately Bastrop Bay.³ Like Austin Bayou,

provides valuable habitat for endangered or threatened shorebirds as well as waterfowl, grassland species, and birds of prey. These include cranes, sedge wrens, grasshopper sparrows, white-tailed kites, and white-tailed hawks. In addition to numerous bird watching opportunities, it provides outdoor opportunities in the form of water related activities to local residents.³ The ecologically significant segment is from the Intracoastal Waterway in Brazoria County to the FM 523 crossing in Brazoria County. This segment is within TNRCC stream segment

- (1) Biological Function- extensive freshwater wetland habitat that displays significant overall habitat value.¹
- (2) Hydrologic Function- extensive freshwater wetlands perform valuable hydrologic function relating to water quality.
- (3) Riparian Conservation Area- fringed by the Brazoria National Wildlife Refuge and is part of the Great Texas Coastal Birding Trail
- (4) Threatened or Endangered Species/Unique Communities- designated as an internationally significant shorebird site by the Western Hemisphere Shorebird Reserve Network, provides habitat for the wood stork, reddish egret, and white-faced ibis.²³

COMMENTS: I and other follow property owners and recreational users of lower Bastrop Bayou strongly oppose the approval of this permit allowing the discharge of up to 250,000 gallons per day of wastewater or any amount. From an environmental standpoint Bastrop Bayou already has enough un-addressed environmental damaging issues without even remotely thinking about adding addition burden of the wastewater discharge. As we all know that is approx. 23

acres of wastewater 1' in depth every 30 days. Unless these 250,000 gallons per day of "treated domestic wastewater" is also classified as potable we don't want or need it. It should be noted that TPWD recognizes Bastrop Bayou has an ecologically significant body of water, which segment is within TNRCC stream segment 1105. Being # (1) Biological Function #(2) Hydrologic Function #(3) Riparian Conservation Area #(4) Threatened or Endangered Species/Unique Communities Designated as an internationally significant shorebird site. Why would anyone want to introduce wastewater into this estuary that is already struggling to survive? Please see attachments above showing the already stressed and struggling Bastrop Bayou environmental conditions, noting that these photos were taken in 2018 and conditions have continued to worsen. The attached 2002 Klotz drainage study page 97 of 1705 pages, included Bastrop Bayou and indicates depths of 2' confirming the silting issue, which maybe further exacerbated by the introduction of up to 250,000 gallons per day of wastewater. I would find it hard to believe that this process of adding wastewater would not add to the already overburdened eco system with some type contaminants and sediment to added to the already stressed conditions, particularly water quality. Put me down as a NO, for approval. Approval of this permit would not add anything positive to Brazoria County are our community and environment. Very Respectfully, Billy J. Walcik 979-236-4403

COMMENTS: Bastrop Bayou should not be used for any dumping ground. The bayou is naturally subject to tidal surges where a north wind blows all the water out to the Gulf. There is literally nothing in the Bayou but mud on those occasions. There will not be an ability to dilute any material this company is sending down the bayou. The ecological effect could be horrific. It was only 15 years ago or so that we eliminated all of the people who were dumping sewer into the bayou and it still recovering. Please do not send us backward!

COMMENTS: I am protesting the dumping of water from a waste water plant into bastrop bayou water shed. No waste water is ever totally clean it leaves too much room for error and bastrop bayou water shed is too crucial to be put at risk with the daily dumping of 250,000 gallons. Our fishery too too strong of a hit last year with the freeze we cannot risk this

COMMENTS: There are too many of these types of companies that say the waste water is "clean" then some error occurs and for extended periods of time something goes wrong and the dump is toxic. I vote no to this proposal.

COMMENTS: As a resident living on Bastrop Bayou, I have grave concerns about what allowing 250,000 gallons of fresh water being released into Bastrop bayou would do to the ecological makeup of the bayou. Bastrop bayou is a tidal bayou, by allowing the amount of water that the permit allows it will change the bayou. I strongly feel that a meeting should be called so that the people that will be most affected by the decisions of TCEQ have a chance to voice their

opinions in this matter. TCEQ was negligent by not notifying all land owners in writing of this pending permit. Legal action will be taken if there is not a meeting between TECQ and interested parties is not held.

COMMENTS: I am oppoto this waste water permit Bastrop Bayou is a tidal flow water that feeds vital bays that supports many fish and wildlife habitats. There is not a regular source of water flow and waste treatment would be sole source of flow upsetting the natural balance of this tidal fed bayou. Additionally Bastrop Bayou is the only drainage for flood water for south of Angleton and added input from a waste water discharge will increase the likelihood of flooded homes in our neighborhood.

COMMENTS: This bayou is not a dumping ground for that volume of "clean" water. It will create a hardship for people on and around the bayou that once started will never recover from. Find somewhere else to dump this so called clean water.
