COMMENTS: I live on Three Mile Creek just upstream and with water added to the creek volume when it rains it will fill up and flood faster making all the property up and down stream more flood prone. By federal law I can not take out one shovel of dirt from the creek I do not understand how you would allow anything to be done to the creek. We also have the horny toad along the creek and this would finish killing them off.

COMMENTS: Concerning the pending trailer park and subsequent sewage treatment facility. Not only would the trailer park be detrimental to the value of everything else in the area, but the addition of the sewage plant would be absolutely detrimental to the local environment. The amount of highly chlorinated water that would need to be pumped into the creek that is dry majority of the time is absurd and could potentially kill off a lot of the wildlife in the area as well as soak the ground and destroy the local flora. I think the sheer amount of negatives that come from this addition of low income

housing and sewage treatment far outweigh any and all positives of adding the neighborhood. At some point we have to stop thinking about how to make a fortune and more so about how we are going to continue to live at all when we completely develop every square inch of the area and destroyed what made people want to move here to begin with.

COMMENTS: The permit for the development of 300 unit mobile home rental park is highly opposed. This will bring terrible environmental hazards as well as safety concerns. Three Mile Creek is not a creek to be used as a discharge of this capacity. We don't have to mention the threat of flooding that this development will bring. As a parent of small children, a rental subdivision also brings higher risk of self offenders living in close proximity. Please deny this permit and development.

COMMENTS: Many concerns re: water treatment and/or release into 3 Mile Creek. The creek has known issues, already. It either floods or is close to bone dry. The homes in Clear Creek Forest will be the recipients of whatever gets released upstream, good or bad. I know I am not pleased about "unnatural" watershed coming through that creekbed. How soon can a public hearing be held to inform the "downstream" neighbors who will be impacted.

COMMENTS: 80,000 gallons of highly chlorinated water in a creek that is dry some of the time will have adverse effects on the ecosystem. There is no water to help dilute waste water from the plant under normal circumstances, much less if the plant has problems which they often do. Not to mention the smell in the creek and surrounding areas especially on cold winter days.

COMMENTS: I hate to make a stink of things... but this is exactly what is going to happen if we don't put a stop to this. What will happen during heavy rainy days... when the continued dumping of these 80,000 gallons are dumped into the creek ... and they overflow. OR 80,000 gallons of highly chlorinated water in a creek that is dry some of the time will have adverse effects on the ecosystem. There is no water to help dilute waste water from the plant under normal circumstances, much less if the plant has problems which they often do. Not to mention the smell in the creek and

surrounding areas especially on cold winter days. What will happen to the wildlife we have in the area... like tadpole..dragon flies ...turtles that live in water areas. The ecological ripple effects would be massive and widespread... we are a united community and I can say 99.9% of us say, nope, nope, nope. Not here!

COMMENTS: I want to place my concern about the proposed water treatment plant. I understand that it would be 80,000 gallons of discharge water per day. That would be 80,000 gallons of highly chlorinated water in Three Mile Creek that is dry most of the time, or has very little running water in it at all. There would be little, to no water to help dilute the waste water from the plant under normal circumstances, much less if the plant has problems which they often do. If that is the case Three Mile Creek would have mainly chlorinated water running into the creek. That water would end up

having adverse effects on the ecosystem. That water is also designed to kill organisms. The other concern is if the plant failed at any point in time and wasn't fixed in a timely manner. Three Mile creek would have human waste discharged in it. This water plant would affect not only the surrounding wild life but also the environment. Not to mention the smell it would bring to in the creek and surrounding areas.

COMMENTS: 80,000 gallons of highly chlorinated water in a creek will have adverse effects on and cause harm to the surrounding ecosystem. Further the dumping of undiluted waste water in seasonal creeks will compound the ecological risk from the chemical additives themselves. The surrounding area of the proposed dumpsite for the development is rural and highly focused on the cultivation, stewardship and productive use of the land. This proposed development puts that use in jeopardy. I personally harvest game animals that utilize these creeks and am very concerned about the health

hazards such pollution will cause to both wildlife and residents. I also worry about the effect of any large scale pollution will have on the livestock present on my land. The discharge of waste products does not happen in a vacuum and many bodies of water in other states have become toxic for normal use as a result, as Texans we can and should do better than allow the same for our waterways.
