COMMENTS: I Glen Elliott of 13931 Countryside St are hereby requesting a contested hearing concerning Bayo Side Partners TPDES permit WQ0015944001. This drainage ditch designated to carry sewage effluent to the bayou only is my east side property boundary and is dry over 90 percent of the year. discharging 75,000 gallons a day on property lines and then downstream crossing into private property is a health hazard for all neighbors, pets and livestock connected to this ditch and Bayou Side Partners property. There are laws in place to prevent personal treatment plants from

discharging within 150 feet of water wells and cannot cross or drain into neighboring properties, these are rated at less than 500 gallons a day. For a 75,000 gallon plant to discharge effluent into a dry ditch on a property line I would assume that this would eventually perc into the nearby water table, especially when the ditch is less than the required 150 feet from downstream wells not to mention pets ,kids and livestock. It is a well known fact that chlorine only affect bacteria and organic organisms, it does not render drugs and other chemicals harmless that are sent down the waste water pipes. Glen Elliott

COMMENTS: I live across the street from the main access point for this project and my property is bordered by the same ditch the discharge will enter. Except during times of rain fall this shared ditch has no flow or standing water and is also closer than the 150' boundary for home sewer systems that are rated at 500gpd or less, this is rated at 75,000gpd. The sewer plant treats organic materials such as human waste but to my knowledge will pass through chemicals, solvents

and drugs to enter the ground water anywhere near the ditch and travel the aquifer. I cannot see how this wouldn't be routed to the detention ponds and then the bayou instead of through individual s properties.

Thank you for your comments.

A copy of your email will be forwarded to the Texas Commission on Environmental Quality (TCEQ) staff responsible for reviewing the application. All timely filed comments will be considered by the staff prior to the final decision on the application. You will be added to the mailing list for this application. After the opportunity to submit comments ends, a copy of the formal written response to all timely filed comments will be mailed to you.

All requests for hearings, if timely filed and authorized by statute or rule, are considered by the Commissioners. The Commissioners will consider your request during a regularly scheduled Commission meeting that is open to the public, and a determination will be made as to whether or not the request will be granted. You will be notified in writing when your request is scheduled for consideration. If your request is granted, the matter will be referred to the State Office of Administrative Hearings (SOAH). The SOAH hearing will be a formal, legal proceeding, conducted in a manner similar to civil trials in state district court. While not required, parties are usually represented by legal counsel. In order for an issue to be considered at a contested case hearing, it must have been first raised in a comment or in a request for a contested case hearing during the public comment period by the affected person or group requesting the hearing.

The TCEQ appreciates your interest in environmental issues. You may track the status of matters pending before the Commission for approval or view comments and requests by visiting the following website: https://www14.tceq.texas.gov/epic/eCID/. If you have any further questions, please feel free to contact the Public Education Program staff at 800-687-4040.

Sincerely,
Office of the Chief Clerk

NOTE: Please do not respond to this email; it will not be answered. If you would like to submit additional comments, please use the online eComments system at: https://www.tceq.texas.gov/agency/decisions/cc/comments.html

COMMENTS: To TCEQ, I, Mitch Gladney and Terry Martin request a "contested case hearing" concerning this permit for a wastewater treatment facility on TPDES Permit No. WQ0015944001. Located at 13920 Country Side Street, Santa Fe, Texas in Galveston County, Texas 77517 for Bayou Side Partners Santa Fe,. Ltd. The EPA ID NO. is TX0140805 and the customer NO. is RN111120523. I am an "affected person". Our address is 1207 Ginger St. Santa Fe, Texas 77517. My cell NO. is 713-705-8167 (Mitch Gladney). Our property is located on the West border of this property. Separated by a 40 foot road easement. The ditch that this permit is referring to for discharging effluent water into constructed pond 1, tence to constructed pond 2,TENCE TO A DITCH, TENCE TO AN UNNAMED TRIBUTARY is located in the 40 foot road easement. That ditch was cut and turned into the "unnamed tributary. That unnamed tributary is an old rice canal for irrigation back in the 1970's. Now. Commenting on comment and response #6: That unnamed tributary runs through our private property. It runs roughly 100 feet away from our home, and less than 50 feet from our water well. During heavy rains, which are pretty common, this tributary becomes a raging river. Once too much rainfall comes too fast, the water backs up and starts flooding our property. With an additional 75,000 gallons of water daily running though our property, we are very concerned we my get flooded water into our home, vehicles, etc. Also, this 75,000 gallons of water will keep the ground saturated constantly. The Southeast corner of our property can only be accessed through the "Ditch" when the ground is dry from no rainfall. This constant saturation of our property will prevent us from maintaining it. We have fencing and a swing gate, and grass to maintain, and will no longer has access to it. The discharge from the constructed pond 2 into the "Ditch" will be roughly 40 feet from our property line. Comment and response #8:In response to plant malfunction. If the TCEQ is so positive this system will not discharge untreated water, why is there a statement in your response "Applicant will be required to report an unauthorized discharge to TECQ within 24 hours"? Once this happens, It's a little to late for us. The damage will already be done. And in your response to comment #4 which says "If the Applicant operates the proposed facility in accordance with the Texas Wate Code, The TCEQ rules and the provisions in the proposed permit, water wells will be protected" My question is what if it isn't ran in accordance or malfunctions for an extended period of time? Again, our property would become contaminated with the raw sewage of over 350 homes flowing through our property.

COMMENTS: I'm writing to you on behalf of Terry Martin and myself, Mitch Gladney. We live at 1207 Ginger St in Santa Fe, Texas 77517. There is a trailer park being developed east of the property line. Years ago, the county dug a drainage ditch in a road easement to help with flooding. Instead of digging the ditch all the way down to Dickinson Bayou, they turned it into a natural creek that runs through our property. Just so you can understand, the creek doesn't run along the property line, it runs well inside the property. It is roughly 130 feet from my home and less than 50 feet from the

water well. These measurements are at normal water levels. When it rains and the water rises, the footage distance goes down. This trailer park development is proposing to discharge their effluent waste water less then 40 feet from my property line into the county dug ditch, then into the creek, right through my property passing my home and water well. We are requesting a contested case hearing to prevent this from being approved. It would be unhealthy enough having the waste water of 360 homes passing right by my water well. What happens when the wastewater treatment plant is having mechanical problems and letting raw sewage dump into the ditch, and passing my water well?

COMMENTS: I would like to request a hearing on the wastewater permit. According to the WCID8, they have an agreement to provide water and sewer to this development. This agreement gave them a permit to start some of their preliminary work to the property. Also, the proposed discharge area is not large enough to handle all of the water they plan to run through it. I've attached many pictures of the area in earlier comments. And again, I request that someone from TCEQ not take the word of a developer and come out and see the ditches in person. The agreement with WCID8

should void this permit no matter the cost of tying into their water and sewer. I believe I heard someone say they were already spending 35 million to build it. If the permit is granted, I want to know who will be responsible for all the clean up that will be required to remove any contamination that occurs due to a malfunction of their wastewater treatment plant, because it will contaminate my property from one end to the other. the creek the water will be forced to go through is not located on the edge of my property, it goes through the middle of it. Next to my home and water well.

COMMENTS: If the wastewater is allowed to be discharged into the ditch, this will block access to the Southeast corner of my property. It will be saturated all the time. It will not have any time to dry out. Not only will it block the access for me, but this ditch is actually a road easement. The county keeps it mowed. With the amount of water they plan to dump on the ground, I believe the mowing equipment will also be blocked from the whole area keeping it from being mowed.

Remember, this man-made ditch is not part of Enchanted Creek, (Rice Irrigation Canal). They are separate. We have to access that part of our property through that ditch.

COMMENTS: I find it interesting that we just got out of the Harris-Galveston County Subsidence meeting concerning the water well permit for this project. Why are they only wanting a permit for 2 wells at 5 million gallons each per year? It's not hard to figure out this is not even half of the water needed for the 75,000 gallons per day they want to discharge from their wastewater facility. Why are the numbers changing for each division of government that permits are

required? If they only want 10 million gallons of water per year, shouldn't they only need a 27,400 gallon daily wastewater discharge permit?

Subject: Fw: BAYOU SIDE PARTNERS SANTA FE LTD, Permit No. WQ0015944-001

I would like to make one more commit for this permit. It is marked as not discharging into tidal influenced waters. The wastewater discharge may not discharge into tidal influenced waters. But the proposed discharge area will dump into a ditch, which will flow into a rice irrigation/drainage canal, then into Dickinson Bayou which is tidal influenced. Wouldn't this make the irrigation/drainage canal tidal influenced? When the bayou is full, the canal does not flow causing flooding all along the canal. I'm pretty sure their wastewater system will keep discharging no matter how full the ditch and canal become. This will cause their discharge to flow into my back yard. Please remember, thier proposed discharge area is only a few feet away from my property line. And the canal runs through my back yard. Myself or my property should not have to suffer so they can make a profit.

Thanks,
Mitch Gladney

Subject: Re: BAYOU SIDE PARTNERS SANTA FE LTD, Permit No. WQ0015944-001

Yes,

Please place me on the mailing list for this permit. I will send pictures showing the area in the near future. I believe the permit states the discharge will be piped to an unnamed ditch. (Which is a drainage ditch dug by the county) thence to an unnamed tributary (which is listed on our deed as an easement for a ditch and irrigation canal for a rice production company from 1973 to 1975. The company is listed by name on the recorded documents.) Then to Dickinson Bayou.

The drainage ditch is tied directly into the irrigation canal which flows through our property (our back yard). Our water well is approx. 40 to 50 ft from the canal downstream from their discharge site. The canal has never dried up, but has a slow current that in dry weather can almost come to a standstill. During heavy rains, this little canal becomes a whitewater rapids river.

This doesn't sound very sanitary to me. I'm not very thrilled about having someone discharging their treated wastewater at a volume not to exceed a daily average flow of 75,000 gallons per day through my property and passing my well water. And what happens when their facility misfunctions? That's a whole different story.

Thank you,
Mitch Gladney & Terry Martin

(Which is a drainage ditch dug by the county) thence to an unnamed tributary (which is listed on our deed as an easement for a ditch and irrigation canal for a rice production company from 1973 to 1975. The

company is listed by name on the recorded documents.) Then to Dickinson Bayou. The drainage ditch is tied directly into the irrigation canal which flows through our property (our back yard). Our water well is approx. 40 to 50 ft from the canal downstream from their discharge site. The canal has never dried up, but has a slow current that in dry weather can almost come to a standstill. During heavy rains, this little canal becomes a whitewater rapids river. This doesn't sound very sanitary to me. I'm not very thrilled about having someone discharging their treated wastewater at a volume not to exceed a daily average flow of 75,000 gallons per day through my property and passing my well water. And what happens when their facility malfunctions? That's a whole different story. I would like to make one more commit for this permit. It is marked as not discharging into tidal influenced waters. The wastewater discharge may not discharge into tidal influenced waters. But the proposed discharge area will dump into a ditch, which will flow into a rice irrigation/drainage canal, then into Dickinson Bayou which is tidal influenced. Wouldn't this make the irrigation/drainage canal tidal influenced? When the bayou is full, the canal does not flow causing flooding all along the canal. I'm pretty sure their wastewater system will keep discharging no matter how full the ditch and canal become. This will cause their discharge to flow into my back yard. Please remember, their proposed discharge area is only a few feet away from my property line. And the canal runs through my back yard. Myself or my property should not have to suffer so they can make a profit. I also sent around 18 pictures of the canal showing erosion from normal currents. Pushing 75,000 gallons on top of normal flow, along with any storm drainage is going to cause significantly more erosion. I request a public meeting concerning this permit. And if possible, we can set up a time to walk the proposed discharge area for a first hand look at what they are proposing to destroy just for a profit.

Thank you for your comments.

A copy of your email will be forwarded to the Texas Commission on Environmental Quality (TCEQ) staff responsible for reviewing the application. All timely filed comments will be considered by the staff prior to the final decision on the application. You will be added to the mailing list for this application. After the opportunity to submit comments ends, a copy of the formal written response to all timely filed comments will be mailed to you. If a decision is made to hold a public meeting, you will receive a hard copy of the public meeting notice in the mail.

The TCEQ appreciates your interest in environmental issues. You may track the status of matters pending before the Commission for approval or view comments and requests by visiting the following website: https://www14.tceq.texas.gov/epic/eCID/. If you have any further questions, please feel free to contact the Public Education Program staff at 800-687-4040.

Sincerely,
Office of the Chief Clerk

COMMENTS: I have filed several comments about this permit through Georgia Carroll-Warren email. I've also received conformation of receipt. Not sure why the comments aren't showing up here? So, Please place me on the mailing list for this permit. I will send pictures showing the area in the near future. I believe the permit states the discharge will be piped to an unnamed ditch. (Which is a drainage ditch dug by the county) thence to an unnamed tributary (which is listed on our deed as an easement for a ditch and irrigation canal for a rice production company from 1973 to 1975. The company is listed by name on the recorded documents.) Then to Dickinson Bayou. The drainage ditch is tied directly into the irrigation canal which flows through our property (our back yard). Our water well is approx. 40 to 50 ft from the canal downstream from their discharge site. The canal has never dried up, but has a slow current that in dry weather can almost come to a standstill. During heavy rains, this little canal becomes a whitewater rapids river. This doesn't sound very sanitary to me. I'm not very thrilled about having someone discharging their treated wastewater at a volume not to exceed a daily average flow of 75,000 gallons per day through my property and passing my well water. And what happens when their facility malfunctions? That's a whole different story. I would like to make one more commit for this permit. It is marked as not discharging into tidal influenced waters. The wastewater discharge may not discharge into tidal influenced waters. But the proposed discharge area will dump into a ditch, which will flow into a rice irrigation/drainage canal, then into Dickinson Bayou which is tidal influenced. Wouldn't this make the irrigation/drainage canal tidal influenced? When the bayou is full, the canal does not flow causing flooding all along the canal. I'm pretty sure their wastewater system will keep discharging no matter how full the ditch and canal become. This will cause their discharge to flow into my back yard. Please remember, their proposed discharge area is only a few feet away from my property line. And the canal runs through my back yard. Myself or my property should not have to suffer so they can make a profit. I also sent around 18 pictures of the canal showing erosion from normal currents. Subject: Re: BAYOU SIDE PARTNERS SANTA FE LTD, Permit No. WQ0015944-001

Yes,

Please place me on the mailing list for this permit. I will send pictures showing the area in the near future. I believe the permit states the discharge will be piped to an unnamed ditch. (Which is a drainage ditch dug by the county) thence to an unnamed tributary (which is listed on our deed as an easement for a ditch and irrigation canal for a rice production company from 1973 to 1975. The company is listed by name on the recorded documents.) Then to Dickinson Bayou.

The drainage ditch is tied directly into the irrigation canal which flows through our property (our back yard). Our water well is approx. 40 to 50 ft from the canal downstream from their discharge site. The canal has never dried up, but has a slow current that in dry weather can almost come to a standstill. During heavy rains, this little canal becomes a whitewater rapids river.

This doesn't sound very sanitary to me. I'm not very thrilled about having someone discharging their treated wastewater at a volume not to exceed a daily average flow of 75,000 gallons per day through my property and passing my well water. And what happens when their facility misfunctions? That's a whole different story.

Thank you,
Mitch Gladney & Terry Martin

Good Morning Mr. Gladney:

It was nice talking with you on the subject matter. As I said, if you like to be place on the mailing list and provide comment on the record, please send your e-mail to Ms. Georgia Carroll-Warren, Team Leader, Notice Team, Chief Clerk Office. Please provide your mailing address and contact information so any future correspondences regarding the subject permit, you will be in the loop.

I am adding Georgia in this e-mail so simply get in touch with her.

Thanks,

During heavy rains, this little canal becomes a whitewater rapids river.

This doesn't sound very sanitary to me. I'm not very thrilled about having someone discharging their treated wastewater at a volume not to exceed a daily average flow of 75,000 gallons per day through my property and passing my well water. And what happens when their facility misfunctions? That's a whole different story.

Thank you,
Mitch Gladney & Terry Martin

Good Morning Mr. Gladney:

It was nice talking with you on the subject matter. As I said, if you like to be place on the mailing list and provide comment on the record, please send your e-mail to Ms. Georgia Carroll-Warren, Team Leader, Notice Team, Chief Clerk Office. Please provide your mailing address and contact information so any future correspondences regarding the subject permit, you will be in the loop.

I am adding Georgia in this e-mail so simply get in touch with her.

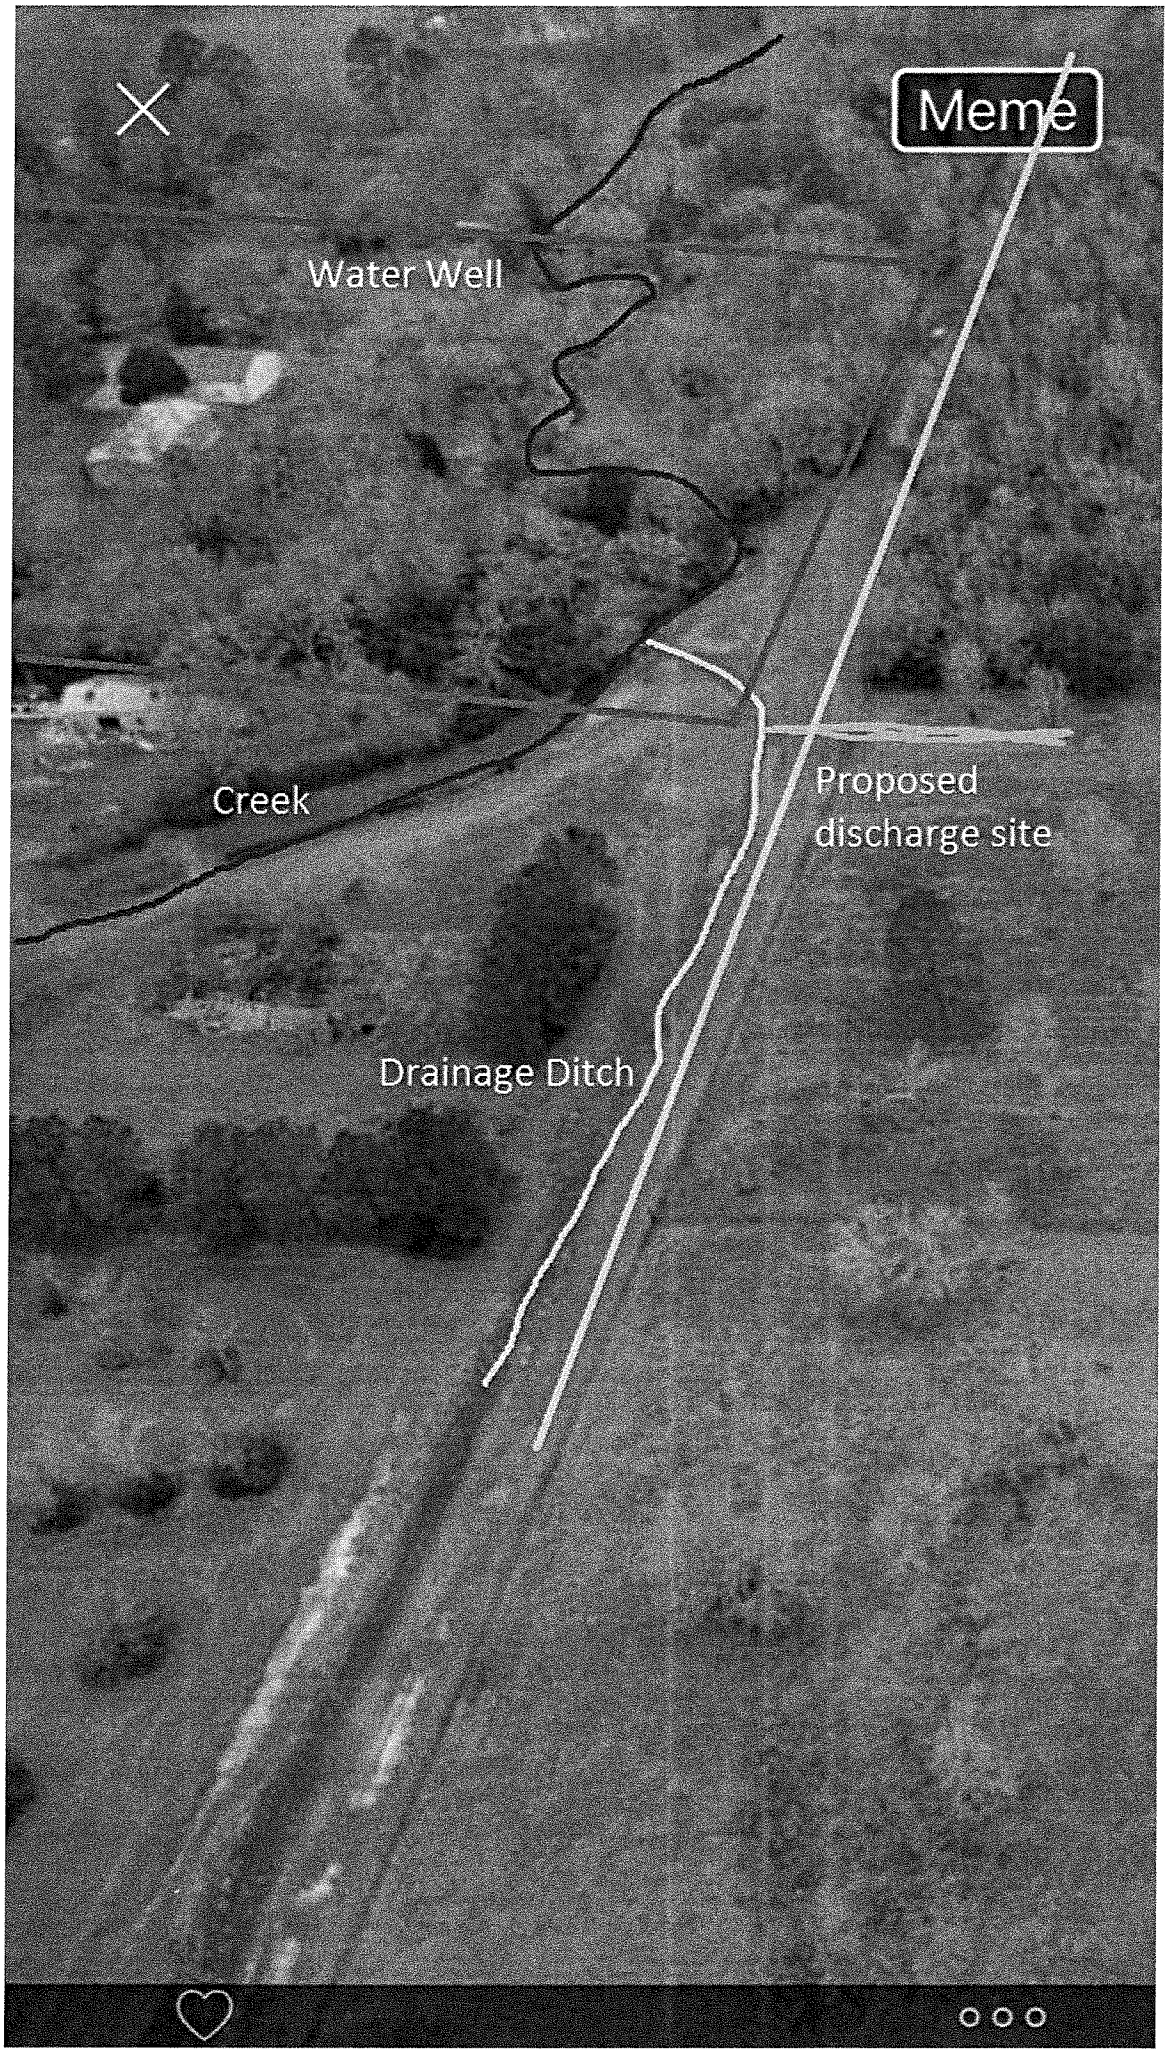

Thanks,

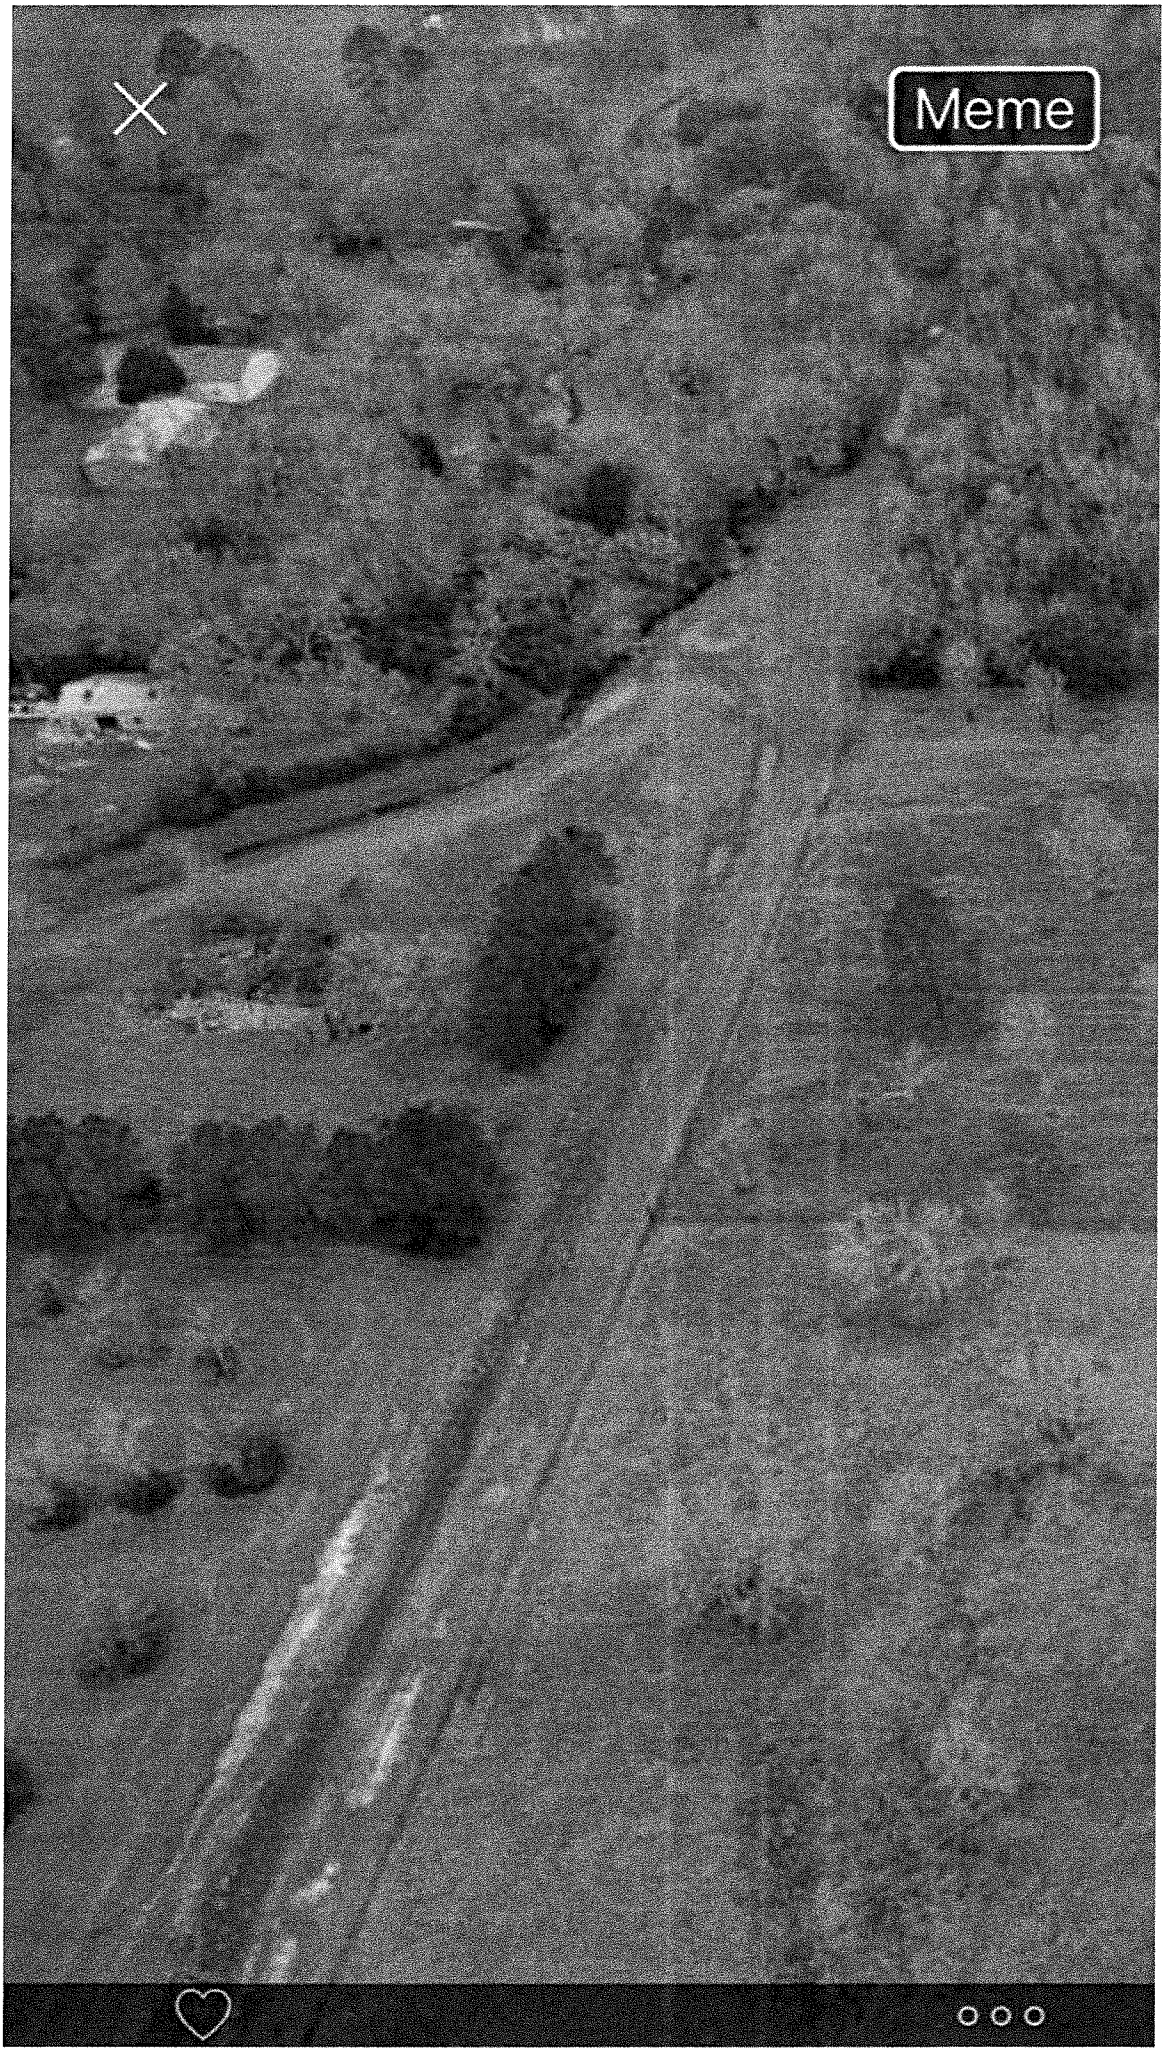

Firoj Vahora, Team Leader

Subject: Re: BAYOU SIDE PARTNERS SANTA FE LTD, Permit No. WQ0015944-001

Yes,

Please place me on the mailing list for this permit. I will send pictures showing the area in the near future. I believe the permit states the discharge will be piped to an unnamed ditch. (Which is a drainage ditch dug by the county) thence to an unnamed tributary (which is listed on our deed as an easement for a ditch and irrigation canal for a rice production company from 1973 to 1975. The company is listed by name on the recorded documents.) Then to Dickinson Bayou.

The drainage ditch is tied directly into the irrigation canal which flows through our property (our back yard). Our water well is approx. 40 to 50 ft from the canal downstream from their discharge site. The canal has never dried up, but has a slow current that in dry weather can almost come to a standstill. During heavy rains, this little canal becomes a whitewater rapids river.

This doesn't sound very sanitary to me. I'm not very thrilled about having someone discharging their treated wastewater at a volume not to exceed a daily average flow of 75,000 gallons per day through my property and passing my well water. Subject: Re: BAYOU SIDE PARTNERS SANTA FE LTD, Permit No. WQ0015944-001

Yes,

Please place me on the mailing list for this permit. I will send pictures showing the area in the near future. I believe the permit states the discharge will be piped to an unnamed ditch. (Which is a drainage ditch dug by the county) thence to an unnamed tributary (which is listed on our deed as an easement for a ditch and irrigation canal for a rice production company from 1973 to 1975. The company is listed by name on the recorded documents.) Then to Dickinson Bayou.

The drainage ditch is tied directly into the irrigation canal which flows through our property (our back yard). Our water well is approx. 40 to 50 ft from the canal downstream from their discharge site. The canal has never dried up, but has a slow current that in dry weather can almost come to a standstill. During heavy rains, this little canal becomes a whitewater rapids river.

This doesn't sound very sanitary to me. I'm not very thrilled about having someone discharging their treated wastewater at a volume not to exceed a daily average flow of 75,000 gallons per day through my property and passing my well water. And what happens when their facility misfunctions? That's a whole different story.

Thank you,
Mitch Gladney & Terry Martin

Good Morning Mr. Gladney:

It was nice talking with you on the subject matter. As I said, if you like to be place on the mailing list and provide comment on the record, please send your e-mail to Ms. Georgia Carroll-Warren, Team Leader, Notice Team, Chief Clerk Office. Please provide your mailing address and contact information so any future correspondences regarding the subject permit, you will be in the loop.

I am adding Georgia in this e-mail so simply get in touch with her.

Thanks,

I already have pretty severe erosion along the creek. In some areas, we have lost at least 10 feet of land along the creek. I will send pictures of different areas. Erosion area 1. If allowed to drain up to 75,000 gallons of water into this irrigation canal every day. I believe my erosion problem will 10 fold.
The canal wasn't designed to handle that much water.

Re: Bayou Side Partners Santa Fe, Ltd.
TPDES Permit No. WQ0015944001
Contested Case Hearing Request

Dear Ms. Gharis.

My name is Chris Green. I am the owner of the property located at the address above and I am requesting a Contested Case Hearing. My property, which is mine and my family's primary residence, is directly adjacent to the property owned by Bayou Side Partners in question. In fact, my eastern property line is shared with the proposed modular home development, to which the TCEQ has issued a permit. Considering that direct adjacency, I would most definitely consider myself an affected person if this development comes to fruition.

I would like it known that in addition to being the property owner, I am also a Registered Architect in the State of Texas (18277) who has been practicing architecture in Southeast Texas for more than 30 years. I am also a LEED Accredited Professional. While I am not a professional engineer, I have an extensive understanding of land development and the impact it has on underdeveloped, unincorporated areas such as ours, when not properly done. While I do not doubt that Bayou Side Partners have met the letter of all TCEQ applicable laws, it is my professional opinion that this development will have a far reaching, negative environmental impact on all private property within a two-mile radius of the development.

Two proposed engineering systems to be utilized in the development will have the most negative impact. 1.) The proposed underground storm water collection system / open detention pond / spillway into Dickenson Bayou and 2.) the proposed waste water treatment facility. It is my understanding that a complete subsurface geotechnical investigation was not ordered for

this site and that the developer's engineer used a document that dated back prior to the 1,000 year storm that flooded our region in September of 2017 (Hurricane Harvey). Considering the impact that that storm had on the water table of our region, it is gross negligence to propose an open detention system or an on site waste water treatment plant on this property. There is a high likelihood that during a major storm event (which we get regularly being so close to the Texas Gulf Coast) contaminated effluence from the waste water treatment facility would enter into the storm water collection system, overwhelm the open detention pond and enter into Dickenson Bayou, which would be catastrophic to the Bayou's ecosystem. Not only that, but mine and my neighbor's properties would receive that same contaminated effluence runoff and the health and well-being of our families and our animals that are housed on our properties would be negatively impacted.

There are quite simply, too many red-flags associated with this development to possibly consider it to be anything but irresponsible. As an Architect, I have been commissioned many times by different clients to conduct feasibility studies on questionable pieces of property in our region. If I would have been hired by Bayou Side Partners to do so for this piece of property, regardless of my home being directly adjacent to the property, I would not have been able, in good conscience, to recommend this densely populated, modular home development be constructed there. The negative ecological cost to the area's natural ecosystem would be just too high to recommend.

If you have any questions, please do not hesitate to contact me.

Kind regards,

Christopher E, Green, AIA LEED AP BD+C

COMMENTS: I would like to request a contested case hearing. My property is directly adjacent to the property in question that is connected to the project number at the top of this form and will be adversely affected by the proposed treatment facility associated with this development. The amount of effluence discharged by the treatment facility into a surface drainage system that will run along my eastern property line and into an already storm water taxed Dickinson Bayou will, without a shadow of a doubt, contribute to an already terrible flooding problem in our entire area. This large

volume of effluence will also find its way into our area's water table and could cause our well water to become contaminated. The massive volume of single family homes (over 350) on such a small areas of land (65 acre total for lots, paving, drainage and amenities) will have a catastrophic impact on the property my family and I call home. Please consider granting my request for a contested hearing regarding this development. Kind regards, Christopher Green, AIA LEED AP BD+C

COMMENTS: The project associated with this TCEQ Permit Number is proposing a large scale private waste water treatment facility that would discharge a large volume of effluence into a small, rural storm drainage canal that is vital for an area that is prone to flooding. My private residence backs up to this proposed development and we get our water from a private well on our property that will be impacted by the effluence discharge of this proposed development as

will the water wells of many of our neighbors. Please allow us the opportunity to speak at a public hearing before this permit application is approved.

From: CHRISTOPHER GREEN <greenhouse.6@comcast.net>
Sent: Tuesday, March 23, 2021 9:08 AM
To: Georgia Carroll-Warren <Georgia.Carroll-Warren@tceq.texas.gov>
Subject: Permit # WQ0015944-001 Protest

Dear Ms. Carroll-Warren,

My name is Christopher Green. I am a resident at 13932 Doris St. in Santa Fe (77517). I am also a Registered Architect in Texas (18277) with 25 years of land development, design & construction experience. I own and reside with my wife, 5 children, 2 dogs, 9 chickens, 1 duck, 2 dogs and a horse on 2.5 acres directly adjacent to the proposed modular home development for which the above referenced permit for a waste water treatment facility has been submitted to TCEQ. I am asking that TCEQ reject this permit on the basis that the WWT facility will discharge its effluence into the primary storm drainage canal that snakes through out little county neighborhood and cause serious flooding issues. This drainage canal bisects my property on it's way into nearby Dickenson Bayou, itself a tidal tributary off of Galveston Bay.

Our entire neighborhood was devastated by flood waters in 2017 during Hurricane Harvey. Our home is an elevated pier-and-beam structure with a ground floor finish elevation 36" above finish grade and we had 32" of water inside of our house. Ever since Harvey, the very nature of the drainage in and around our neighborhood has changed. Throughout the year, the creek that runs through our property (the drainage canal) keeps a trickle of water in it. But during hard rains of 3

inches or more, the waters rise quite rapidly, which did not happen before Harvey. I believe that Harvey raised the water table in our entire region to just a few feet subsurface, which would explain why our soil does not absorb storm water runoff at the same rate as it did prior to Harvey.

I am going into this level of detail because the effluence that will be constantly discharged into the drainage canal will undoubtedly cause the canal to rise at a much faster rate and to a much higher level during times of hard rain, which living on the Texas Gulf Coast happens quite regularly 9 months out of the year. This added water flow into the drainage way will impact mine and many other homes that line this drainage canal. I do not believe that the developer of this property nor their engineers have taken this information into account in their proposing that they construct a WWT facility that will serve 400 modular homes and discharge effluence into this primary drainage canal. I fear the effects would be catastrophic and could force us to leave our beloved country neighborhood because of the constant risk of flood in addition to the health risk to humans and animals from a constant, high-volume effluence discharge into a drainage canal that runs through our private property.

I respectfully ask that you consider all of this in your review of this permit application and that it be rejected. If you would like to ask any questions of me, please do not hesitate to reply to this email.

Kind regards,

Christopher Green, AIA LEED AP BD+C

From: CHRISTOPHER GREEN <greenhouse.6@comcast.net>
Sent: Tuesday, March 23, 2021 9:08 AM
To: Georgia Carroll-Warren <Georgia.Carroll-Warren@tceq.texas.gov>
Subject: Permit # WQ0015944-001 Protest

Dear Ms. Carroll-Warren,

My name is Christopher Green. I am a resident at 13932 Doris St. in Santa Fe (77517). I am also a Registered Architect in Texas (18277) with 25 years of land development, design & construction experience. I own and reside with my wife, 5 children, 2 dogs, 9 chickens, 1 duck, 2 dogs and a horse on 2.5 acres directly adjacent to the proposed modular home development for which the above referenced permit for a waste water treatment facility has been submitted to TCEQ. I am asking that TCEQ reject this permit on the basis that the WWT facility will discharge its effluence into the primary storm drainage canal that snakes through out little county neighborhood and cause serious flooding issues. This drainage canal bisects my property on it's way into nearby Dickenson Bayou, itself a tidal tributary off of Galveston Bay.

Our entire neighborhood was devastated by flood waters in 2017 during Hurricane Harvey. Our home is an elevated pier-and-beam structure with a ground floor finish elevation 36" above finish grade and we had 32" of water inside of our house. Ever since Harvey, the very nature of the drainage in and around our neighborhood has changed. Throughout the year, the creek that runs through our property (the drainage canal) keeps a trickle of water in it. But during hard rains of 3 inches or more, the waters rise quite rapidly, which did not happen before Harvey. I believe that Harvey raised the water table in our entire region to just a few feet subsurface, which would explain why our soil does not absorb storm water runoff at the same rate as it did prior to Harvey.

I am going into this level of detail because the effluence that will be constantly discharged into the drainage canal will undoubtedly cause the canal to rise at a much faster rate and to a much higher level during times of hard rain, which living on the Texas Gulf Coast happens quite regularly 9 months out of the year. This added water flow into the drainage way will impact mine and many other homes that line this drainage canal. I do not believe that the developer of this property nor their engineers have taken this information into account in their proposing that they construct a WWT facility that will serve 400 modular homes and discharge effluence into this primary drainage canal. I fear the effects

would be catastrophic and could force us to leave our beloved country neighborhood because of the constant risk of flood in addition to the health risk to humans and animals from a constant, high-volume effluence discharge into a drainage canal that runs through our private property.

I respectfully ask that you consider all of this in your review of this permit application and that it be rejected. If you would like to ask any questions of me, please do not hesitate to reply to this email.

Kind regards,

Christopher Green, AIA LEED AP BD+C

Subject: Bayou side mobile home park

I tried joining the webinar but it was not working. I want to register a formal complaint against this horrible and unethical project. This backs up directly to my back fence. It has been 80 acres of woods and pasture. They have mowed it down and are destroying it. Bobcats and coyotes are fleeing into our properties. During harvey, the water was six feet deep on my property and three feet deep inside my house. And the trailer park wants to concrete over the woods and pasture. The flooding, the traffic nightmare, but worst of all is their septic plan to dump their treated sewage water into the creek that runs through my property and home and pasture on two sides of my 3 acres. My horse drinks from it. My children play in it. You have no idea of the size of the class action lawsuit against this development there will be, and against you as well since you are supposed to be the ones protecting the people who live in this community. We have been fighting this for a year. To say we are furious and disgusted by this is an understatement. We want our hearing.

Sincerely,
Shiloh Green

COMMENTS: I protest this permit application. The proposed plan intends to dump their drainage water into the creek running through my property. This creek is my land and my home with animals and children. It is not public drainage usage. My home severely flooded and I do not give permission for anyone on this permit to drain their septic onto my property at 13932 Doris St. My back fence shares a border with this mobile home park. I request a public hearing.

Thank you for your comments.

A copy of your email will be forwarded to the Texas Commission on Environmental Quality (TCEQ) staff responsible for reviewing the application. All timely filed comments will be considered by the staff prior to the final decision on the application. You will be added to the mailing list for this application. After the opportunity to submit comments ends, a copy of the formal written response to all timely filed comments will be mailed to you.

All requests for hearings, if timely filed and authorized by statute or rule, are considered by the Commissioners. The Commissioners will consider your request during a regularly scheduled Commission meeting that is open to the public, and a determination will be made as to whether or not the request will be granted. You will be notified in writing when your request is scheduled for consideration. If your request is granted, the matter will be referred to the State Office of Administrative Hearings (SOAH). The SOAH hearing will be a formal, legal proceeding, conducted in a manner similar to civil trials in state district court. While not required, parties are usually represented by legal counsel. In order for an issue to be considered at a contested case hearing, it must have been first raised in a comment or in a request for a contested case hearing during the public comment period by the affected person or group requesting the hearing.

The TCEQ appreciates your interest in environmental issues. You may track the status of matters pending before the Commission for approval or view comments and requests by visiting the following website: https://www14.tceq.texas.gov/epic/eCID/. If you have any further questions, please feel free to contact the Public Education Program staff at 800-687-4040.

Sincerely,
Office of the Chief Clerk

COMMENTS: I request a public hearing on this permit. The current application as written creates health hazards and violates drainage easements. My property lies on the "un-named" canal where there discharge will take place. Although I am upstream of the discharge, the canal, during frequent heavy rains, backs up and floods my property. My animals drink from that canal as well as it's proximity to my well and house. I also protest the permit on the grounds that the

proposed treatment plant is a hazard to the bayou system. One failure of the system would create a pollution hazard to the bayou ecosystem as well as a hazard to the residents downstream that enjoy recreation on the bayou.

Good morning,

I would like to file a complaint regarding the above reference permit.

The permit would allow affluent, regardless of "treatment" to flow into a canal that bisects my property. My plat specifically states that the canal is an easement for water drainage from a rice farm and not an easement for waste water. Additionally, the area is given to flooding and the canal during a flood has run backwards. This would present a danger to my family, animals and property.

Please feel free to contact me with questions or if needed, pictures.

Thank you for for this consideration.

Best regards,

COMMENTS: 3/7/2024 Laurie Gharis TCEQ Chief Clerk Office of the Chief Clerk PO Box 13087 Austin, TX 78711 Mrs. Gharis, I request a contested case hearing on the applicant: Bayou Side Partners Santa Fe, Ltd. TPDES Permit No. WQ0015944001. Firstly, this property has been sold and the new owner has filed for a new permit under a different LLC other than Bayou Side Partners Santa Fe. My water well is within 10 feet of the proposed wastewater effluent drainage location. This ditch, where the effluent is proposed to drain, stays dry unless there is a heavy rain. Again, this is not a creek, but a dry ditch. This will lead to concentrated wastewater effluent contaminating my well. Our property and many others were here long before this proposed mobile home development. The onus is on the TCEQ and the developer to ensure it is built the safest, not cheapest or most convenient, way possible. Their property goes all the way to Dickinson Bayou. Why let them dump effluent in our back yards? I understand the developer's goal is to get it done in the most economical way, but it should not be at the expense of my family's health. The developers are also in negotiations with WWCID8, who have already agreed to bring in utilities. The city of Dickinson, League City, Galveston County, and Santa Fe are all within a few miles, and all have projects in the works that are bringing in utilities. Approval of this plant is only a feather in the cap of the developer; a story he can tell his associates. To my neighbors and I, this is where we raise our children. I do not expect the developers to have any consideration for the health and safety of my community, but I would hope the TCEQ does. Please let us make our case as to why this is an irresponsible configuration, that has no benefit to anyone but the developer's bank account. Sincerely, Emily Harman 13924 Countryside St Santa Fe, TX 77517 (281)433-5406

COMMENTS: My water well is less than 20 feet away from the "unnamed tributary" that the wastewater goes into. This ditch remains dry unless there is a heavy rain. I'm worried that this concentrated wastewater will have a negative effect on our quality of water and our health. This will put my family at risk all to save the developers money. What background does the developer have running a sewage plant? What happens when the power goes out? What happens

when the ponds overflow? A portion of the development lies in the floodplain. I'm also concerned about those living close to the plant and how their health will be effected breathing in bio aerosols of feces, etc.

Hello Georgia,

I live next to the property that applied for this permit. This does not seem like a very logical discharge location. We know that there are families whose animals drink water in the creek down stream. We also would like some clarification on if this is the proper permit, as the ditch they are dumping into is dry for portions of the year.

Thank you for your help.

Thank you for your comments.

A copy of your email will be forwarded to the Texas Commission on Environmental Quality (TCEQ) staff responsible for reviewing the application. All timely filed comments will be considered by the staff prior to the final decision on the application. You will be added to the mailing list for this application. After the opportunity to submit comments ends, a copy of the formal written response to all timely filed comments will be mailed to you. If a decision is made to hold a public meeting, you will receive a hard copy of the public meeting notice in the mail.

The TCEQ appreciates your interest in environmental issues. You may track the status of matters pending before the Commission for approval or view comments and requests by visiting the following website: https://www14.tceq.texas.gov/epic/eCID/. If you have any further questions, please feel free to contact the Public Education Program staff at 800-687-4040.

Sincerely,
Office of the Chief Clerk

NOTE: Please do not respond to this email; it will not be answered. If you would like to submit additional comments, please use the online eComments system at: https://www.tceq.texas.gov/agency/decisions/cc/comments.html

Hello Georgia

This email is in reference to permit WQ0015944-001 . I have reviewed the plans submitted to the TCEQ that were posted at the public library by Bayou Side Partners. My community has many concerns about this project. I believe the permit application to be intentionally inaccurate in order to avoid many of the red flags that plague this property. We are hoping that the TCEQ will look very closely into this project. The property is located within a flood plain, the ditch they are using to drain into is dry longer than 1 week in a year, these are a few of the items filled out incorrectly. There are many more and I'm hopeful the process bares them all out. It is many understanding that these inaccuracies aren't permitted by the TCEQ and should be grounds for denial. If this developer cant properly fill out paperwork, I don't understand how the TCEQ would put the health of the community in their hands. Who is the TCEQ engineer assigned to this project? Please let me know if you need any other information.

Thank You

Shane Harman

COMMENTS: To TCEQ, Jon Nierman, Emily Lindley, Bobby Janecka, & Kelly Keel, in response to the Executive Director's Decision on Bayou Side Partners request for a Permit to operate a Domestic wastewater treatment facility at 13920 Country Side St. in Santa Fe, TX. In Galveston County. The TPDES Permit No. is WQ0015944001. The EPA ID NO. is TX0140805. The Customer No. is CN605824390 and the RN Number is RN111120523. I, Melissa Jared request a "Contested Case Hearing." I am an "affected person" by the fact that the 'Ditch' as stated runs through the entire width of my property. The 'Ditch' as it has improperly been named was actually dug out as a Detention pond to slow the discharge from upstream Dickinson Bayou. The 'Ditch' itself does not drain directly into Dickinson Bayou. Your usage of Google Earth and GIS mapping do not show that the 'Ditch' does not flow directly into Dickinson Bayou. I finally realized that the applicant used the grainy black and white photos to prevent you from seeing this. The flow from this Detention pond actually flows through an old rice canal which runs through private property and in very close proximity to private water wells. My domestic animals as well as neighbors domestic animals drink from this canal. Parts of the canal are narrow, 3 to 5 feet across, which will slow the flow to Dickinson Bayou due to inadequate flow. Again I am Melissa Jared. My address is 1203 Ginger St., Santa Fe, TX 77517. My cell phone # is 409-766-0345. Now that I have identified myself let me respond to the Executive Director's Response to Comments. The first glaring statement that jumps off the page to me is the statement "In the map submitted by the Applicant, no wells were shown within one mile of the proposed facility." I don't know if this was a misstatement, misprint, or what. The fact is there are many wells located within 1 mile of the proposed facility. That is why there are so many people that commented during the Comment period. If memory serves me correctly, I believe the Railroad Commissioner has a map of all the wells in a specific area. I find a lack of due diligence in this answer. I responded to Comment 6 and expressed concern regarding the effluent leading to more flooding of the receiving waters. Again, if you were to actually look at the old rice canal and where this effluent is supposed to discharge there would be no question that there is inadequate flow in a heavy rain event now. This extra discharge can only make it worse. The local Floodplain Administrator didn't want to hear anything about it & referred us back to you. I made comment in #7 as to regionalization issues, stating that existing, alternative systems exist which the Applicant should connect to. I will attach a signed letter from an attorneys office representing WCID8 saying that they have an agreement to provide services to Bayou Side Partners. In comment 8 I ask what will happen when something goes wrong such as loss of power, malfunction of equipment, or storms. The directors answer was a permittee must maintain adequate safeguards to prevent the discharge of untreated or inadequately treated wastes during electrical power failures by means of alternate power sources, standby generators, or retention of inadequately treated wastewater. Now I admit that I am not an engineer so I may have overlooked it, but, I don't see anywhere on the plans for a backup generator. This ends the comments that I made. I sincerely hope that you will look at my answers one more time in a more serious note. Now that we all have spent so much time looking over this Application, why is another person applying for the same Permit at the same location under a different name and company?

COMMENTS: I would like to request a contested hearing. My information is as follows: Jane Layman 8203 Oak Lane Santa Fe, TX 77517 561-335-7144 I am an affected person because my home is in the neighborhood where this project is being proposed and my water quality will be affected. I am requesting that the decision be reconsidered because having an onsite sewage plant so close to the bayou is not environmentally safe. Also, drainage is already a problem in the neighborhood, and adding a large concrete sewage plant will cause current drainage routes to be redirected onto neighboring properties, making our draining worse.. Thank you for your consideration, Jane Layman

COMMENTS: This project should NOT be approved. The infrastructure in that area is not sufficient for a large project like this: flooding/drainage, traffic burden, waste water for the project putting existing private wells in jeopardy. These are serious concerns of existing residents in the area and they have not been adequately addressed by the project owners.

My husband, Scott, and I are Santa Fe residents living at 8203 Oak Lane. We are writing about development referenced by the permit WQ0015944-001. We are concerned about the sewage treatment and flooding issues related with having an additional 350+ homes in that property. We are asking for a meeting to discuss the matter.

Thank you.

COMMENTS: To TCEQ, Jon Nierman, Emily Lindley, Bobby Janecka & Kelly Keel, in response to the Executive Director's Decision on Bayou Side Partners request for a Permit to operate a Domestic wastewater treatment facility at 13920 Country Side St. in Santa Fe TX in Galveston County. The TPDES Permit No. is WQ0015944001. THE EPA ID NO. is TX0140805. The Customer No.is CN605824390 and the RN Number is RN111120523 I, Katherine Martinez request a "Contested Case Hearing" I will be directly effected by the proposed wastewater treatment plan. My property line is directly on the eastside of the property the wastewater treatment plant is being built on. My concerns are as follows: The atmospheric hazards and harmful gases, which can increase the risk of other threats. We are on a well water system in the area, if there is spillage or a leak my worry is about contamination of our drinking water. I am also concerned about the amount of noise the treatment plant will make as I will be directly next to the facility. Also, will the treatment plant have a maintenance schedule to insure the safety of the surrounding area.

I am emailing you in reference to permit # WQ0015944-001.

I would like to protest the referenced permit please. As a neighboring resident we have some major concerns about the plans put forward for the proposed neighborhood and the sewage plan proposed.

We are requesting an emergency meeting in reguards to the sewage plan. Please let me know what else needs to make this happen

Thank you
Robert and Katherine Martinez

COMMENTS: To: TECQ, Jo Nierman, Emily Lindley, Bobby Janecka & Kelly Keel, in response to the Executive Director's Decision on Bayou Side Partners request for a permit to operate a domestic wastewater treatment facility @ 13920 Country Side St in Santa Fe TX in Galveston County. The TPDES Permit No. is WQ0015944001. The EPA ID NO is TX0140805. The Customer No. is CN605824390 and the RN is RN111120523. I Robert Martinez request a "Contested Case Hearing" My property is on the property line of the Eastside of the proposed planned community. I will be directed effected and impacted by any planned waste dispose facility built. My concerns are the smell of raw sewage into the existing residential neighborhood. The spillage of sewage draining into private nearby properties. The surrounding community is on a fresh water well system and spillage could contaminate residents drinking water. Is there a maintenance plan to ensure the the plant stays functioning properly and will the plan presented be able to keep up w/ the amount of waste inside the community? For example when Bayou Vista during COVID when everyone was quarantined requested to stay home and the local sewer plant was ill equipment to maintain the amount of waste being drained. Living next to a treatment plant could be harmful to myself and nearby residents w/ the hazards gasses which can increase the risk of other threats. It will create a pungent smell, hybrid bacteria and leave an environmental footprint.

COMMENTS: I am formally requesting a hearing in reguards to this permit based on the existing flow of drainage flows the opposite way of the bayou. I have video proof (from a spring rainfall) of the flow going the opposite way if it needs to be provided. I would also like to request copies of the denial letters from the several water districts in our surrounding area making this the only option this development has for sewer disposal.

COMMENTS: Our concerns for this development include: Are the lagoons that are proposed going to be able to contain the amount of sewage if there happens to be another pandemic? Bayou Vista is a prime example of a system that could not handle all the sewage trying to be disposed of. What about if we have another power outage like we had last year in the freeze? This area lost power for 4 days. Is there a back up power plan? The processing plant will it create a sewage smell for all the existing homes to have to smell? How about for contamination to the existing water wells and small

creeks livestock drinks from? Will there be sewage contamination? How often will the sewage plant be maintained and have service checks? Who will monitor the management company to ensure that service checks are being completed on a timely manner when needed? There's a lot of unanswered questions and concerns from existing homeowners that have not been answered and throughly reviewed

COMMENTS: My concern is we are all one one acre at a minimum with multiple sprinklers per system. There is only about 75 houses on our two narrow streets. They are going to be servicing over 300 units on just 70 acres. The smell, possible failure, flood waters overtaking the system dumping effluent back into the bayou are all major concerns for a project they are forcing into an area that is prone to major flooding. I have seen multiple feet of water back up not just

during hurricanes but during thunderstorms that are common to this area. Thank you for your time in reviewing the negative effects of high density housing in an area not set up for this level of population.

COMMENTS: To TCEQ, Jon Nierman, Emily Lindley, Bobby Janecka, & Kelly Keel, in response to the Executive Director's Decision on Bayou Side Partners request for a Permit to operate a Domestic wastewater treatment facility at 13920 Country Side St. in Santa Fe, TX. In Galveston County. The TPDES Permit No. is WQ0015944001. The EPA ID NO. is TX0140805. The Customer No. is CN605824390 and the RN Number is RN111120523. I, Roger McCrary request a "Contested Case Hearing." I am an "affected person" by the fact that the 'Ditch' as stated is partly on my property. The 'Ditch' as it has improperly been named was actually dug out as a Detention pond to slow the discharge from upstream Dickinson Bayou. The 'Ditch' itself does not drain directly into Dickinson Bayou. Your usage of Google Earth and GIS mapping do not show that the 'Ditch' does not flow directly into Dickinson Bayou. I finally realized that the applicant used the grainy black and white photos to prevent you from seeing this. The flow from this Detention pond actually flows through an old rice canal which runs through private property and in very close proximity to private water wells. Domestic animals also drink from this canal. Parts of the canal are narrow, 3 to 5 feet across, which will slow the flow to Dickinson Bayou due to inadequate flow. Again I am Roger McCrary. My address is 13913 Country Side St. Santa Fe, TX 77517. My cell phone # is 409-789-4597. In the Water Treatment Permit Application on the first page there is a map with the neighboring property owners my homestead is #29. My farmland is not shown but it goes South and West behind #26, #27, & #28. The Entrance to Bayou Side Park is 2 houses down from me. From what I can see, the Treatment facility will be 500 to 600 yards from my home. Now that I have identified myself let me respond to the Executive Director's Response to Comments. The first glaring statement that jumps off the page to me is the statement "In the map submitted by the Applicant, no wells were shown within one mile of the proposed facility." I don't know if this was a misstatement, misprint, or what. The fact is there are many wells located within 1 mile of the proposed facility. That is why there are so many people that commented during the Comment period. If memory serves me correctly, I believe the Railroad Commissioner has a map of all the wells in a specific area. I find a lack of due diligence in this answer. I responded to Comment 6 and expressed concern regarding the effluent leading to more flooding of the receiving waters. Again, if you were to actually look at the old rice canal and where this effluent is supposed to discharge there would be no question that there is inadequate flow in a heavy rain event now. This extra discharge can only make it worse. The local Floodplain Administrator didn't want to hear anything about it & referred us back to you. I made comment in #7 as to regionalization issues, stating that existing, alternative systems exist which the Applicant should connect to. I will attach a signed letter from an attorneys office representing WCID8 saying that they have an agreement to provide services to Bayou Side Partners. In comment 8 I ask what will happen when something goes wrong such as loss of power, malfunction of equipment, or storms. The directors answer was a permittee must maintain adequate safeguards to prevent the discharge of untreated or inadequately treated wastes during electrical power failures by means of alternate power sources, standby generators, or retention of inadequately treated wastewater. Now I admit that I am not an engineer so I may have overlooked it, but, I don't see anywhere on the plans for a backup generator. This ends the comments that I made. I sincerely hope that you will look at my answers one more time in a more serious note. Now that we all have spent so much time looking over this Application, why is another person applying for the same Permit at the same location under a different name and company?

RE: Galveston County WCID No. 8; request for utility services to 77.952 acres

Dear Mr. Mickler:

We represent Galveston County WCID No. 8 (the "District") and have been asked by the Board of Directors to correspond with you concerning your pending request for water and sanitary sewer services to the 77.952-acre tract on Countryside Street, which is located outside the boundaries of the District. You have proposed that the tract be developed as a land lease community of manufactured homes with approximately 370 single-family equivalent connections.

The District and Developer have reached a preliminary agreement and the Developer has posted a deposit with the District, and therefore plan to enter a specific development agreement that would address annexation of the property into the boundaries of the District, as well as the development and financing of utilities, including offsite water and sewer line extensions and lift stations. All engineering for public utilities must be done by a civil engineering firm selected by the District.

Based on the foregoing, the District has agreed to commit to your proposed development 370 equivalent single-family connections of water and sewer capacity. Should a development agreement not be concluded and construction commenced within twelve (12) months from the date hereof, this commitment shall automatically terminate.

Very truly yours,

John R. Wallace

cc: Board of Directors

Mr. James Newman

COMMENTS: I have sent in requests before but have left out pertinent information that you request. I am requesting a "Contested Case Hearing" on Permit # WQ0015944001 in Galveston County by BAYOU SIDE PARTNERS SANTA FE LTD. I am Roger McCrary, live at 13913 Country Side St. My daytime phone is 409 789-4597. I am approximately 1000 feet from the proposed project. This request is based on several points. 1) The treated effluent will drain into a ditch that runs through homeowners property in very close proximity to their drinking water wells. 2) the ditch that the

Developers plan to dump their Treated effluent is not a Texas waterway. It actually was originally a rice field canal that was converted to a drainage ditch. 3) this ditch does not have the "capacity" to handle anywhere near the up to 75,000 gal/day that they are requesting. 4) I would request that you send someone to this site and make an actual observation of what is being proposed. There is no way that anyone can see the actual water flow route without seeing it in person. There is too much vegetation to be able to see it from pictures. 5) I personally will be affected by the Effluent being dumped into the larger retention ditch. This ditch runs through my property. When there is a storm, the effluent will back up into my property due to the lack of drainage "capacity". Add to this the Waste water plant shutting down & now I have untreated Waste water in a ditch that my livestock drink from. Again, I am requesting a CONTESTED CASE HEARING, that someone from TCEQ actually visit this site, and that you deny this permit.

COMMENTS: I respectfully request a hearing on TCEQ Permit #WQ0015944001. It was obvious in last nights Public Meeting That TCEQ was NOT prepared for this meeting. Many questions were asked that TCEQ should have known the answer to if you had at least read the Comments that were sent in. I would also request that you send someone in person to see the proposed route to drain the Wastewater effluent to Dickinson Bayou which is on the Texas 303(d) List (Category 5). I would also request that You contact Michael Shannon, the Galveston County Engineer, about the a letter

from WCID8 for a commitment to se. . water and sewer to the tract. I plead that , ou thoroughly examine this request to install a Wastewater Treatment Facility within this Mobile Home Park. To allow this as proposed would be a travesty. Thank you for your time, Roger McCrary.

COMMENTS: I have written before but feel compelled to send my thoughts again before the April 4th.virtual meeting. I have many concerns about this project. Flooding, extreme traffic, & the sewage treatment plant. I don't see how anyone would let them discharge the effluent from this plant to an open ditch which runs through other peoples yards in very close proximity to their water wells. This ditch was put there to take care of rain water, not Up to 75,000 gal/day of sewage treatment effluent. The Developers are not in the sewage treatment business so for this plant I'm sure that it

will not be run by a highly knowledgeable person/s. What is going to happen when something goes wrong such as loss of power, malfunction of equipment, storms, or what have you. My guess is raw sewage floating down this ditch, through peoples yards, and ultimately to Dickinson Bayou which is on the Texas 303(d) List (Category 5). I appeal to your common senses to realize that eventually, there is going to be a problem of some sort with dire consequences. I plead that you deny this permit.

I would like to protest the waste water treatment plant application referencing permit WQ0015944-001. After looking at it I find several discrepancies. The most glaring is the fact that the discharge will flow down a drainage ditch and pass by 2 water wells that are 100 feet or less away from the proposed drainage ditch. I would also like to be added to the mailing list for this proposal. Thank you for your time.

COMMENTS: I am requesting immediately a hearing for this permit To build this trailer park. The construction of this development will cause unwanted water flow into my property and influx of traffic that our narrow road cannot handle. The build up of land on property that floods will cause damages to our working dogs and facility. This careless construction puts the lives of residents at risk to flooding. It is the duty of our elected officials to protect the residence in

the area from careless profit seeking developers that's aim to place a massive low income development within our neighborhood. A herring must be held to discuss midgation of sewage/ gray water and plans for roadway infrastructure.

COMMENTS: I Shane McNamara the President of Bellum K9 Inc. Located at 13820 Santa Fe Texas 77517 am strongly against Permit Wq0015944001 being requested by Bayou side partners santa fe Ltd. I am requesting a contested case hearing. My phone number is 34603187312. My property is located less then 500 feet from the proposed site. Bellum K9 LLC is the foremost K9 supplier for the department of defense as well as multiple police agencies worldwide. The building of this high density, modular home site and "TPDES" will surely shed toxic water onto our property and for that

Pollutant/damage there will be potential threat to our highly valuable assets. In the event this permit is issued without further investigation We will be seeking legal counsel and looking to prosecute any and all entities or individuals responsible for damage/poisoning/harm to federal government property. Lastly working dogs sense of smell is 40times stronger than a humans. The Odor discharge from said "TPDES" interferes with our ability to conduct Scent detection training for narcotics and explosives. Our working dogs are trained outside with open air and cannot be exposed to this Ariel odor exposure. Can TCEQ insure there will not be ANY Odor pollutant exposure to our working dogs? Is there certain evidence that will be no toxic water exposure to our working dogs? If these cannot be answered this permit must be Contested and investigated to its furthest extent. Very Respectfully, Shane McNamara President Bellum K9 Inc.

A copy of your email will be forwarded to the Texas Commission on Environmental Quality (TCEQ) staff responsible for reviewing the application. All timely filed comments will be considered by the staff prior to the final decision on the application. You will be added to the mailing list for this application. After the opportunity to submit comments ends, a copy of the formal written response to all timely filed comments will be mailed to you.

All requests for hearings, if timely filed and authorized by statute or rule, are considered by the Commissioners. The Commissioners will consider your request during a regularly scheduled Commission meeting that is open to the public, and a determination will be made as to whether or not the request will be granted. You will be notified in writing when your request is scheduled for consideration. If your request is granted, the matter will be referred to the State Office of Administrative Hearings (SOAH). The SOAH hearing will be a formal, legal proceeding, conducted in a manner similar to civil trials in state district court. While not required, parties are usually represented by legal counsel. In order for an issue to be considered at a contested case hearing, it must have been first raised in a comment or in a request for a contested case hearing during the public comment period by the affected person or group requesting the hearing.

The TCEQ appreciates your interest in environmental issues. FAX:

COMMENTS: My name is Dr. Jacqueline Meyer and I am writing to you in opposition of this permit (WQ0015944001). This opposition is based on personal and professional knowledge and expertise. It is also based out of concern for the safety of my family including my newborn child. The EPA states clearly that "when a septic system is located too close to a drinking water well, contaminants from the wastewater can end up in drinking water." This permit is supporting the dumping of waste products into an area that is surrounded by water wells that support homes with drinking water

across multiple acres of land. I sincerely hope that you reconsider the approval of this permit as this will put multiple lives in danger and could potentially result in numerous lawsuits. The illnesses that could arise from encountering these contaminants that will be displaced into our drinking water will place and even more significant strain on the currently overburburdened healthcare systems. For the sake of our personal safety and the sake of healthcare across Galveston County I sincerely hope that once again you reconsider this permit.

Thank you for your comments.

A copy of your email will be forwarded to the Texas Commission on Environmental Quality (TCEQ) staff responsible for reviewing the application. All timely filed comments will be considered by the staff prior to the final decision on the application. You will be added to the mailing list for this application. After the opportunity to submit comments ends, a copy of the formal written response to all timely filed comments will be mailed to you.

All requests for hearings, if timely filed and authorized by statute or rule, are considered by the Commissioners. The Commissioners will consider your request during a regularly scheduled Commission meeting that is open to the public, and a determination will be made as to whether or not the request will be granted. You will be notified in writing when your request is scheduled for consideration. If your request is granted, the matter will be referred to the State Office of Administrative Hearings (SOAH). The SOAH hearing will be a formal, legal proceeding, conducted in a manner similar to civil trials in state district court. While not required, parties are usually represented by legal counsel. In order for an issue to be considered at a contested case hearing, it must have been first raised in a comment or in a request for a contested case hearing during the public comment period by the affected person or group requesting the hearing.

The TCEQ appreciates your interest in environmental issues. You may track the status of matters pending before the Commission for approval or view comments and requests by visiting the following website: https://www14.tceq.texas.gov/epic/eCID/. If you have any further questions, please feel free to contact the Public Education Program staff at 800-687-4040.

Sincerely,
Office of the Chief Clerk

NOTE: Please do not respond to this email; it will not be answered. If you would like to submit additional comments, please use the online eComments system at: https://www.tceq.texas.gov/agency/decisions/cc/comments.html

COMMENTS: I would like to request a contested case hearing for TPDES Permit number WQ0015944001, Bayou Side Partners Santa Fe, Ltd. I live very close by to this project and believe that if this permit is issued and construction is allowed, our land and property will be adversely affected by waste runoff. Our wells for our drinking water will be affected by waste runoff. I believe my family's health and the health of the wildlife in this area will be put at risk. Dickinson Bayou and the wildlife inhabitants of the waterway will suffer from the runoff and everything downstream will be affected. Properties in this area are already at risk of flooding during a rain event which was evidenced by Hurricane Harvey. We experienced severe flooding after Harvey and believe the state needs to assess how having a waste water facility in a area affected by this might adversely affect the property in this area. We also feel the construction of this waste water facility greatly affects property value. Please consider this a formal request for a contested case hearing for WQ0015944001 and WQ0016300001.

COMMENTS: Jacob White Construction/Jeff Mickler/Bayou Side Partners is proposing a sewage plan for a development that is showing their effluent waste water dumping on land of property owners in the L'Hommedieu subdivision of Santa Fe, Texas on CountrySide Street. This is entirely unacceptable and outrageous, as the developer is proposing to carve out their land for maximization of commercial revenue while the property owners here would have to endure their noxious waste water odors, drains and floods onto our private property. Additionally, this would be in violation of Texas

Administrative Code Title 30, Part 1, Chapter 309, Subchapter B in regard to location of their plan near our private water wells. These wells are too close to the proposed drainage of their waste water. Additionally, this treated waste water will be flowing where livestock owned by the citizens of this area can reach it and drink it, before it flows into Dickinson Bayou compromising other animals, plants and citizens. Dickinson Bayou is already considered "impaired" by TCEQ as a compromised body of water with low dissolved oxygen levels and higher than normal levels of bacteria. We cannot afford to dump anything else into this waterway. Lastly, we are fighting to help community leadership and statewide and locally elected officials that this area is known to flood in both severe and regular rain events. It is not a matter of if we will flood, but by how much. This plan is not sufficient to ensure that in these floods that this waste water will not back up onto my property or that of my neighbors closer to the bayou. I respectfully request that TCEQ deny this permit.
