Austin, TX 78711-3087

In Re: Application for City of Venus, for proposed Texas Pollutant Discharge Elimination

System (TPDES) Permit No. WQ0010883002

Attn: Chief Clerk Gharis

I offer the below Comments:

I am an affected person within the definition of that term by the Texas Administration Code:

I am the heir to property that is located at 1308 Ozro Road, consisting of approximately 38 acres. The confluence of Boggy Branch and Armstrong Creek is on our property. Approximately 80% of our land currently lies within the FEMA Zone A floodplain (2013).

This TPDES uniquely and adversely affects me in the following ways, and the application should be denied for the following environmental, procedural and technical deficiencies pertaining to this application.

Environmental:

1. Contamination of my private water well from toxins including PFAS which this TPDES is not testing for, this is the only source for water I have
2. Our children play, swim, and fish in these creeks, even in drought years there are multiple holding pools within the creeks. I am concerned about skin absorption and ingestion of toxins including PFAS.

3. Contamination of the fish in my stock ponds which we use for food. The pond is feed by Armstrong Creek and Boggy Branch.
4. This plant will affect all fish and aquatic life along with the entire ecosystem of these creeks. Including endangered species per Texas Parks and Wildlife.
5. The waterways in Ellis County have numerous endangered species, and migratory birds through this corridor and these have not been addressed.
6. Loss of wildlife habitat from the thousands of acres associated with this TPDES and the development it will service.
7. I will have the odor/smells and air pollutants from not just this plant but all 3 that are in very close proximity to each other and my farm

Flooding;

1. The amount of additional water from this TPDES and its development will increase flooding on my property
2. It will cause creek bank erosion, accumulation of sediment and expansion of the floodplain. This will cause loss of land from my property to the floodplain.
3. The loss of useable agricultural land will cause economic damages to my property
4. FEMA has not a determined a Base Flood Elevation in this area, and there are no flow meters that establishes current flow. It would be impossible to determine the flooding downstream without a comprehensive flood study which was not done.
5. There are no flood mitigation dams downstream to protect landowners and other communities.
6. The facility is in a floodplain but there are no controls in the application to protect the facility of flooding

This TPDES is only one part of a multi-thousand acre development. The Master Plan includes approximately 4200 +/- acres including 3 TPDES pending applications, 3 pending MUD applications,

This 4200 acre development MUST be reviewed as one. The environmental impacts including flooding on my property will be cumulative. The acreage is all contiguous and will dump effluent and storm water into the same 2 creeks in the same watershed. My property will be affected by this entire development as both of these creeks Armstrong Creek and Boggy Branch merge on my property before heading downstream. All 3 TPDES requesting permits are not sufficient to handle the GPD of the portions of this development they are to service and all will require expansion.

The applicant submitted applications just under 1 million GPD to avoid further regulations for larger TPDES.

Upstream Dams impact is unknown.

Application:

Applicant did not provide affected landowner Name, Address, and mailing list with application for required notification

Applicant does not own the land

The applicant does not have a lease for the property

Applicant does not have a road easement to the property

Respectively,

Hayden Farrell

In Re: Application for City of Venus, for proposed Texas Pollutant Discharge Elimination

System (TPDES) Permit No. WQ0010883002

Attn: Chief Clerk Gharis

I offer the below comments:

I am an affected person within the definition of that term by the Texas Administration Code:

My property is located at 1308 Ozro Road, consisting of approximately 38 acres. The confluence of Boggy Branch and Armstrong Creek is on my property. Approximately 80% of my land currently lies within the FEMA Zone A floodplain (2013).

The application should be denied for the following environmental, procedural and technical deficiencies pertaining to this application.

Environmental:

1. Contamination of my private water well from toxins including PFAS which this TPDES is not testing for, this is the only source for water I have
2. Contamination of the soil from PFAS transported id creek and floodwaters
3. My Grandchildren play, swim, and fish in these creeks, even in drought years there are multiple holding pools within the creeks. I am concerned about skin absorption and ingestion of toxins including PFAS.

4. Contamination of the fish in my stock ponds which we use for food. The pond is feed by Armstrong Creek and Boggy Branch.
5. This plant will contaminate the creek and affect all fish and aquatic life along with the entire ecosystem of these creeks. Including endangered species per Texas Parks and Wildlife.
6. The waterways in Ellis County have numerous endangered species, and migratory birds through this corridor and these have not been addressed.
7. Loss of wildlife habitat from the thousands of acres associated with this TPDES and the development it will service.
8. I will have the odor/smells and air pollutants from not just this plant but all 3 that are in very close proximity to each other and my farm

Flooding;

1. The amount of additional water from this TPDES and its development will increase flooding on my property
2. It will cause creek bank erosion, accumulation of sediment and expansion of the floodplain. This will cause loss of land from my property to the floodplain.
3. The loss of useable agricultural land will cause economic damages to my property
4. FEMA has not a determined a Base Flood Elevation in this area, and there are no flow meters that establishes current flow. It would be impossible to determine the flooding downstream without a comprehensive flood study which was not done.
5. There are no flood mitigation dams downstream to protect landowners and other communities.
6. The facility is in a floodplain but there are no controls in the application to protect the facility of flooding

Application:

3. Nearby WWTP's
5. Improper flow characteristics were determined. Personal observation is not adequate.

6. Downstream characteristics are inaccurate

8. Applicant did not contact all other WWTPs as required. Or TRA

10. The amount of sludge being contained onsite is too large for a floodplain

This TPDES is only one part of a multi-thousand acre development. The Master Plan includes approximately 4200 +/- acres including 3 TPDES pending applications 2 pending MUD applications, This 4200 acre massive development MUST be reviewed as one. The environmental impacts including flooding on my property will be cumulative. The TPDES's for this entire development are 1 mile apart from each other. The acreage is all contiguous and will dump effluent and storm water into the same 2 creeks in the same watershed. My property will be affected by this entire development as both of these creeks Armstrong Creek and Boggy Branch merge on my property before heading downstream. All 3 TPDES requesting permits are not sufficient to handle the GPD of the portions of this development they are to service and all will require expansion.

Dam influence is unknown.

Applicant does not own the land

The applicant does not have a lease for the property

Applicant does not have a road easement to the property

Applicant did not provide affected landowner Name, Address, and mailing list with application for required notification

Gabriel Griffin

1308 Ozro Rd.

Venus, Tx 76084

Laurie Gharis, Chief Clerk

Office of the Chief Clerk, MC 105

TCEQ

P.O. Box 13087

Austin, TX 78711-3087

In Re: Application for City of Venus, for proposed Texas Pollutant Discharge Elimination

System (TPDES) Permit No. WQ0010883002

Attn: Chief Clerk Gharis

I offer the below comments:

I am an affected person within the definition of that term by the Texas Administration Code:

My property is located at 1308 Ozro Road, as part of a family farm containing approximately 38 acres. The confluence of Boggy Branch and Armstrong Creek traverse and merge on the property. Approximately 80% of the land currently lies within the FEMA Zone A floodplain (2013).

The application should be denied for the following environmental, procedural and technical deficiencies pertaining to this application.

Environmental:

1. Contamination of my private water well from toxins including PFAS which this TPDES is not testing for, this is the only source for water I have
2. Contamination of the soil from PFAS transported id creek and floodwaters
3. I have two young boys that play, swim, and fish in these creeks, even in drought years there are multiple holding pools within the creeks. I am concerned about skin absorption and ingestion of

toxins including PFAS.

4. Contamination of the fish in my stock ponds which we use for food. The pond is feed by Armstrong Creek and Boggy Branch.
5. This plant will contaminate the creek and affect all fish and aquatic life along with the entire ecosystem of these creeks. Including endangered species per Texas Parks and Wildlife.
6. The waterways in Ellis County have numerous endangered species, and migratory birds through this corridor and these have not been addressed.
7. Loss of wildlife habitat from the thousands of acres associated with this TPDES and the development it will service.
8. I will have the odor/smells and air pollutants from not just this plant but all 3 that are in very close proximity to each other and my farm

Flooding;

1. The amount of additional water from this TPDES and its development will increase flooding on my property
2. It will cause creek bank erosion, accumulation of sediment and expansion of the floodplain. This will cause loss of land from my property to the floodplain.
3. The loss of useable agricultural land will cause economic damages to my property
4. FEMA has not a determined a Base Flood Elevation in this area, and there are no flow meters that establishes current flow. It would be impossible to determine the flooding downstream without a comprehensive flood study which was not done.
5. There are no flood mitigation dams downstream to protect landowners and other communities.

Application:

3. Nearby WWTP's
5. Improper flow characteristics were determined. Personal observation is not adequate.
6. Downstream characteristics are in accurate

8. Applicant did not contact all other WWTPs as required. Or the TRA

10. The amount of sludge being contained onsite is too large for a floodplain

This TPDES is only one part of a multi-thousand acre development. The Master Plan includes approximately 4200 +/- acres including 3 TPDES pending applications 2 pending MUD applications,

This 4200 acre massive development MUST be reviewed as one. The environmental impacts including flooding on my property will be cumulative. The TPDES's for this entire development are 1 mile apart from each other. The acreage is all contiguous and will dump effluent and storm water into the same 2 creeks in the same watershed. My property will be affected by this entire development as both of these creeks Armstrong Creek and Boggy Branch merge on my property before heading downstream. All 3 TPDES requesting permits are not sufficient to handle the GPD of the portions of this development they are to service and all will require expansion.

Application:

Applicant did not provide affected landowner Name, Address, and mailing list with application for required notification

Dams effect is unknown.

Applicant does not own the land

The applicant does not have a lease for the property

Applicant does not have a road easement to the property

Respectively,

Gabriel Griffin
