COMMENTS: I am not in favor of granting this permit. I think the location of this plant as proposed will be problematic to Robstown and Calallen. We do not have enough water supply to share. the TCEQ has already approved a permit for a Lithium refinery in the same vicinity which will be VERY water-use intensive. This location has currently met the stage 2 water restrictions criteria set forth by local municipalities.

COMMENTS: Minor or major project, this ammonia plant will release hazardous ammonia. 1. What does the modeling analysis show after 3, 5, 10, years of compounding and/or cumulative ammonia air releases into our atmosphere and community soil? 2. What does current modeling indicate how ammonia air emissions will affect or soil, water and health? Are studies available for public viewing? 3. Does TCEQ have any previous data or modeling on any previous applications for green ammonia to base its analysis? 4. What will our air quality be after the solar and wind power fails to transition. 5. Was an analysis or modeling conducted on how our extreme heat weather will affect the stress on the cold storage tanks and the safety of all the valves within. 6. Will excessive and long extremely hot days affect the integrity (leaks, expansion, failures) of the tank and all the valves, pumps, etc associated with storing and pushing product into pipelines. 7. Does your modeling factor how our South Texas extreme hot weather will exacerbate storage tank pressure and the likelihood of: equipment failure that will increase release of toxic gasses. 8. Best comprehensive safety plans only mitigates all the above, so it is then assumed this plant can and does pose a danger to our community and air quality. 9. How does TCEQ MODEL these comprehensive safety plans into their air analysis if currently a green ammonia plant does not exist? or determine if comprehensive safety plans are sufficient enough to mitigate effects of frequent and accidental releases? 10. The location of the ammonia plant is undisputed in a highly populated area and poses a huge air quality risks due to regular and persistent ammonia releases. 10. The release of any large amounts of ammonia will travel swiftly and can reach or home and schools before any attempts to call for assistance. What is TCEQ analysis of how quickly it will reach our schools and neighborhoods, Minutes? Seconds? 10. Due to the location, and in the likely event of a catastrophe releases or explosions, the collateral damage is in the 1000's. 11. Based on the emissions listed in air permit, It is undisputed that our air quality will be compromised and the potential for health risk has been greatly enhanced.

COMMENTS: I am against the approval of the air permit for the ammonia plant proposed on FM 1889, Robstown, TX. The plant would emit hazardous contaminants such as Anhydrous Ammonia, Carbon Monoxide, Hazardous Air Pollutants, Nitrogen Oxides, Organic Compounds, Sulfur Dioxide. There are 2 large school districts, 2 large daycare facilities and 2 nursing homes within 2 miles of the location. There is also a future church within 1/2 mile which will have 100's of children attending inside and outside weekly. I was born and raised in this area and at only 25 years old, I fear for the health and safety of my future children and the children of countless friends and family. This plant would adversely affect the future of this small community and the health of thousands of residents and thousands of children attending school and daycare, as well as negatively affecting the health and safety of the elderly at the 2 nursing homes. Please don't make a decision that could possibly harm the health and safety of my future children and the children of countless others.

~~Environmental~~

Even a well run facility will have accidents, incidents, spills, leaks, etc. For that reason, facilities handling potentially hazardous should not be constructed near communities. Within the vicinity of the proposed facility, there are schools, daycares, nursing homes, and these include individuals of vulnerable populations. Has TCEQ accounted for impacts from incidents/spills/leaks? This facility would also be within an area affected by hurricanes and other tropical weather events. TCEQ should account for this risk in the evaluation of this permit. TCEQ should evaluate how health risks would be borne by low-income and minority populations.

I urge TCEQ to deny Nueces Green Ammonia LLC Air Quality Permit number 174951.

COMMENTS: I sent my letter last night ... I have family members and neighbors who live less than a mile from the proposed site. This is a community of long time homeowners, farmers, business owners, teachers, schools, and churches. Building a highly toxic "green" AMONIA plant makes NO SENSE in this location. There are multi-generations living in close proximity and would be severely impacted, physically, economically, and environmentally with this monster of a facility. This is NOT the location for an ammonia plant that WILL harm and poison the land, air and aesthetics of this community for future generations, The company is from India. This will be the first factory of this sort in North America ... Robstown should NOT be their guinea pig! What about all the water needed to make AMONNIA? I believe the Robstown water source is the Nueces River! Where will the required water come from? Where and how will the byproduct be disposed of? County Roads 1889 and 46(?) are 2 lane roads that will not be able to handle the truck traffic. Who is going to repair and maintain these roads? Please do NOT allow this company to contaminate Robstown! Robstown deserves better than this! Do you really think those "high paying" employees will live in Robstown? I highly doubt it... they will want to live on Ocean Drive, far away to protect their families.

FAX:

COMMENTS: Dear Texas Commission on Environmental Quality, I am writing to express my strong opposition to the proposed Nueces Green Ammonia plant, which is planned to be built approximately 3-5 miles from my home. As a resident of this community, I have significant concerns regarding the environmental and health impacts this facility may have on my family and neighbors. My primary concern is the potential health risks associated with ammonia production and emissions. I have a six-year-old

child who suffers from asthma and a husband who has severe allergies. The presence of an ammonia plant in such close proximity to our home poses a serious threat to their respiratory health. Ammonia is a highly volatile substance that can cause respiratory irritation and exacerbate conditions such as asthma and allergies. Even low levels of exposure have been linked to increased risks of lung diseases and other health complications. I respectfully request that the TCEQ deny the permit for the Nueces Green Ammonia plant or, at the very least, relocate it to a more appropriate location far from residential areas. The health and safety of our children, families, and environment should take precedence over industrial development. Sincerely, Angela Arredondo

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

Permit number: 174951

I would like to make a public comment **against** Nueces Green Ammonia LLC.

If this ammonia plant is built, it will effect many more than those in the surrounding community. It will also affect EVERYONE who relies on water from the Nueces River and lake, EVERYONE who farms their land within miles, EVERYONE who counts on the produce from these farms, EVERYONE who has livestock on their property, EVERYONE who feeds their families from said livestock, EVERYONE who utilizes the nearby nature preservations, EVERYONE who has invested money in real estate, homes and businesses, EVERYONE who has any connection to the drainage ditches where they will be dumping their waste water and EVERYONE who utilizes the Texas power grid. There is a much bigger picture at risk than just those who live nearby. There is a domino effect that will be set in motion if this ammonia plant is granted the permit to build.

Protect our air and community. Deny the permit to Nueces Green Ammonia LLC.

I would like to make a public comment **against** Nueces Green Ammonia LLC.

The permit itself, notes the following will be emitting into the community
HAZARDOUS AIR POLLUTANTS, CARBON MONOXIDE, NITROGEN
OXIDES, ANHYDROUS AMMONIA, SULFUR DIOXIDE, ORGANIC
COMPOUNDS, PARTICULATE MATTER.

We have sons, daughters, nieces, nephews, brothers, sisters and
grandkids living, working and attending school next to the proposed site.
The proposed site is in a community and borders many farming properties.

If you don't want to live next to it, don't force it on someone else.

Prove to everyone that you will protect citizens and deny the permit to
Nueces Green Ammonia LLC.

I would like to make a public comment against Nueces Green Ammonia LLC.

The permit itself, notes the following will be emitting into the community HAZARDOUS AIR POLLUTANTS, CARBON MONOXIDE, NITROGEN OXIDES, ANHYDROUS AMMONIA, SULFUR DIOXIDE, ORGANIC COMPOUNDS, PARTICULATE MATTER. If you don't want you and your family breathing in this, don't make my family.

This community is already storing (and has gotten the approval for increased storage) of PCBs. Protect the citizens and stop allowing hazardous and cancer causing chemicals near our homes.

Allowing this plant to be built, will affect health, safety, air, water and revenue for the community. People have invested in real estate, business and homes which will all be wasted money when people don't want to breathe in heavily polluted and odorous air and leave our community.

Do right by your duties, protect the citizens and deny the permit to Nueces Green Ammonia LLC.

COMMENTS: I am opposing the building of the Nueces Green Ammonia plant at the proposed location. I live approximately 0.5 miles away from the proposed location, and the amount of emissions and noise generated from a refinery plant this close to a residential area is not acceptable. With the amount of undeveloped land in this area it does not make sense to build this close to a residential area for many reasons. There has been a lot of new residential development just one mile north of the proposed location. And as fast as this area is growing, the area in a 1 mile radius around the proposed location will be the site to many future homes. Just look at a satellite image of this area and the direction of development and you can easily see why this is a terrible location for an ammonia plant. I hope the TCEQ will use their better judgment and deny the permit to build in this location. There are many areas in this region that would make a great place to build an ammonia plant, but this is not one. Thank you.

COMMENTS: I do not understand how this project can even be considered in this location! Calallen are is a growing healthy community and putting this facility right over the border in Robstown will hamper our growth. Also I am scared because this company seems to hide facts. On their marketing they have deleted residential homes and added grass! If they think it is appropriate why do they hide the homes? Plus being in the fall out zone has lowered property values and generally made our area less desirable. Please understand this is in the heart of our community that is residential. Vote No. plus the water that we do not have!!

COMMENTS: Why are we just now hearing about this? Our community is expanding and there are neighborhoods going in all in this area. If there is a toxic release with the prevailing winds the release will be blown right into neighborhoods. This plant being this close to a growing population will cause health problems. Not to mention all the other infrastructure needed like large trucks or train cars traveling through our communities with these chemicals. It will also probably degrade our property values as well. This plant is gonna be right in our neighborhoods. It should be built where other plants are not in where we live.

COMMENTS: I want to request TCEQ deny the air permit for Avina Ammonia plant they are planning on self-monitoring there plant and that is not going to work out. How can a Ammonia plant use technology to self monitor. Things can go wrong there can be system failures. What's the point of having TCEQ if you guys aren't going to monitor industry? You guys don't even have the personal protective equipment to go monitor the ammonia plant how will this be safe FOR US?! YOU GUYS CAN'T ASK US TO PUT OUR LIVES IN DANGER FOR THERE PROFIT. THIS AMMONIA WILL BE EXPORTED. AMMONIA IS BANNED FROM OTHER COUNTRIES WHY DO THEY WANT TO MAKE IT HERE. YOU GUYS ARE PUTTING OUR LIVES AT RISK. I HAVE ASTHMA! You GUYS HAVE TO DENY THE PERMIT AND BE APART OF THE PEOPLE SIDE NOT PROFIT ENTITIES THAT ONLY CARE ABOUT THERE GREED. If you guys actually read there permit they don't discuss the technology they'll be using they don't have an emergency contingency plan. There's to many unanswered questions to this permit answers that they haven't worked through or don't know. Ammonia Something so volatile we the community need to know what everything they are planning on doing. This is backward thinking to let them apply for a permit thats not even completed. We don't need generalization we hard facts. We don't need fantasy thinking we need to know there actual complete plans. Waste water not even engineered!?! Come on TCEQ do your job.

☐ I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)

Please give this form to the person at the information table. Thank you.

My name is Tanya Bergstrom. I'm here to ask you to deny the air permit. I realize this will affect the entire Coastal Bend area because of the amount of water it needs. TCEQ if you were here to do your job you wouldn't even allow this plant to be so close to residential area. You guys are just as corrupt as the city officials and Economic Developments that are benefiting from this. You can't prioritize a handful of jobs over the expense of our air, water, and public health. Avina's never been transparent/they aren't here to benefit the community they've demonstrated this by hiding behind NDAs, making close door deals, seeking tax breaks and continuing to keep the amount of water confidential. How is "water" public resources confidential? Avina's never even opened up an ammonia plant before. They picked this area because they thought we were going to lay down and take it. This is nothing more than a foreign company coming to United States taking advantage of the Inflation reduction act. It makes no sense that something advertised as clean energy is emitting anhydrous ammonia, Carbon monoxide, nitrogen oxide, organic compounds including particular matter 2.5 and 10 but TCEQ doesn't consider other industries that also releasing toxics. And if Avina were to release more pollution than permitted TCEQ will always increase the emission limits like they done in the past with other industries.

This is all for international EXPORT

Where will pipelines be running? IDK Avina does not have a plan for this

Waste water still to be engineered. But Mr. Vishal was quoted that it will be dumped in the canal

No emergency contingency plan in the permit

Automated with technology no monitoring (what if there's a system failure)

TCEQ does not have personal protection equipment to make sure Ammonia plant is following regulations/procedures

Public tax payer money to fund private entities

COMMENTS: Seems like an unnecessary hazard to be added to a nonindustrial area. I feel this type of industry should be added to an existing industrial area, whereas everyone already knows not to build schools, homes, or businesses nearby. The thought of a company storing liquid ammonia at -27 degrees in a huge tank upwind of residential areas concerns me. I'm sure they will promise redundant refrigeration systems, pressure relief systems, safety shutdown systems, etc., but I feel the possibility of a risk of chemical release due to unforeseen failures is just too great, especially if there are not too many of this exact type of plant being built.

COMMENTS: The county roads in this area have no shoulder and the damaged edges are already making it difficult to pull to the right when meeting oncoming traffic, as they are being damaged by an increase in truck traffic already as of late. When a car pulls over into the grass in order to miss the damaged edge of the road, they stand a pretty good chance of blowing out a tire, as there are a lot of things in the grass they can't see. This project will bring a lot of truck/heavy equipment traffic to the already compromised city rd 46 and 73. There are also homes nearby that will have to listen to the flares/blowers and possibly be affected by the emissions of the plant and flares. Surrounding homes/properties will definitely be devalued as this area will be known as an industrial area, and possibly as a stinking industrial area.

COMMENTS: This plant is planned to be built less the 100 yard from our home, and many other homes in the area. Concerns for health risks, air quality, property value, traffic, and overall safety are a large concern. The talk of this plant being built has and will plummet the value of all home and land in the area, some of which have been in our family for over 100 years. Not to mention the fact that no one in the area has been formally notified of any plans to build this ammonia plant.

COMMENTS: Anhydrous Ammonia pipeline release occurred in 2016 in Nebraska, with probable cause of the pipeline rupture due to corrosion fatigue cracks that grew under disbonded poly tape coating - damage from the outside of the pipeline. Contributing factors were external loading which caused bending stress in the pipe in addition to cyclic stresses in the pipe from internal pressure intervals of ammonia transported. Reference NTSB accident # DCA17FP001. For existing pipeline that will be used for the plant, has thorough review been completed to ensure similar incident will not happen due to residual/historical/anticipated cyclic pressures? Higher operating pressures on old/lower pressure design pipeline? Cathodic protection system? Condition/history of external coating on pipeline? Will cathodic protection be checked/maintained/repared as needed as part of maintenance plan for the plant?

COMMENTS: Will existing pipelines be used to transfer finished products/Ammonia and if so has a corrosion engineering review been completed to determine if material of the pipe is suitable for the new process service? Especially if there are overlapping product streams past/present/future which may create a unique corrosion phenomenon. Will results be published publicly to assure existing pipeline material of construction is suitable for planned process conditions? Since existing/new pipelines will cross under multiple populated areas.

COMMENTS: Dear TCEQ, I am writing to protest the Nueces Green LLC, (Green Ammonia) facility. Thousands of acres of farmland, homes, and businesses may not be immediately downwind but are downwind, which is can still be a concern. Potential leaks/spills, not to mention traffic, indicate that there should be a better location - perhaps closer to the ship channel where many of the local refineries are, not to mention the Port of Corpus, which could allow for a much shorter pipeline. There is raw land on the ship channel, west of Buckeye Hub Dock facility, potentially over 60 acres. Although I live on the other side of town in Flour Bluff, I have roots in this area and still visit. Longtime family friends are in the immediate area, as well as multiple coworkers I see every day. Also, my family has farmland in this area, and my grandparents are buried less than a 1/2 mile away from the proposed location. Another safety concern is having not one but two flares in such proximity to homes and farmland. If a fire from a flare were to make it to the ground, it could endanger nearby homes and create a fire hazard by potentially catching many acres of farmland on fire. At a minimum, I feel the residents in this area should be given a reason(s) why this location was selected instead of pursuing (what appears to be) plenty of available land closer to the ship channel/Port of Corpus and refineries that also have flares. I realize one reason to choose this location could be lower land prices vs. land closer to the refineries; however, in the long run, if this facility is to be long-term as advertised, then being closer to the existing facilities may off for logistics, maintenance of the facility and daily operation. Sincerely, Jared Bockholt

COMMENTS: I am asking the TECQ to NOT grant a permit for Ammonia Plant to be built on 1889. It is such a bad location for such a business. The health and safety of the residents in this community needs to come first. It needs to be built somewhere outside of a residential area for obvious safety reasons. I cannot think of one reason the TECQ should grant this. Please think of the people living in this area first and not a hazardous business that just wants to make money at our expense!

COMMENTS: Being a resident of this area and working in the refining industry for 10 years, I believe that this a very bad idea to have an ammonia plant near our homes. We object to the building of this plant in our area because we will be affected by the emissions of this plant during normal run and outages.

COMMENTS: It is the LOCATION of the ammonia plant that is the problem. Residences, schools, churches, nursing homes ,farms, etc.are all in the area in close proximity to the proposed location. It is NOT an industrial area! An ammonia plant belongs in an industrial area away from residential areas. Why was this site ever considered? MAJOR FAIL for this site to be considered for an ammonia plant!

COMMENTS: I know these are concerns already voiced. And I also know that you have been provided with numbers and distance details.... So, I am simply going to add our voice to the long list of citizens that do not want this facility built in our safe, little agricultural community. We have lived and raised two children in this area that would be most affected by the presence of this facility since 1994. It simply is not a logical location for such a facility for reasons that I will share below: It will be centrally located within miles of the city limits of two cities – Robstown and Corpus Christi, notably the Calallen area. Living in the Calallen area, I will focus my concerns on this north side, although my concerns are the same for the city and community of Robstown to the south of the facility. For those not familiar with our weather, with the exception of a few “cold” fronts in the winter (January thru February basically), the wind typically blows from the south. This puts the community of Calallen directly in the path of emissions. This area, aside from being quite populated and home to many businesses and restaurants, is home to an Elementary School and a High School. It also serves the community with a minimum of 4 large churches (St Thomas Catholic Church, River Hills Baptist, Grace United Methodist and Pax Christi Liturgical Church and Retreat Center) and many smaller ones. Any accident with emissions of any kind would adversely affect the people living in this community. And yes, claims are that this facility will operate safely. BUT, the very nature of an accident is that it unexpectedly and unintentionally occurs resulting in damage and / or injury. If Nueces Green Ammonia LLC could 100% guarantee no accidents will occur, the community could potentially feel differently. With all the warnings and concerns shared by citizens to date, I can only imagine the magnitude of suits that will be filed for any accidents that cause damage and injuries. For a handful of jobs, this facility poses a huge threat to the safety of a community that is too close in proximity for potential harm. Its presence simply does not warrant a handful of jobs in the big picture. In addition to being a threat to the safety and health of the community, any accidents could also be detrimental to acres and acres of farmland that contribute to the nation’s needs. Another fact. Have the 2 roads that would access this facility been looked into at all? FM 1889 is a 2 way farm to market road that runs on the east side between Robstown and Corpus. The construction of such a project would, no doubt in my opinion, not hold up and would be destroyed. Even worse, County Road 46 that would border the facility to the north is barely a 2 lane little road with NO center stripe. And, the intersection is a low area. After a rain, drive by and observe the standing water that remains for days. No doubt, the area would need to be raised which could substantially increase the cost of construction. And, the water issue. Oh my, the projected usage is astronomical to our area. We have suffered from drought conditions for years and years and years. This facility will further worsen an already bad situation. The simple pleasure of restricting our usage and being able to water our yards is sad, but added usage of this magnitude could result in injury to people’s health on a large scale. With all of these concerns, the simple fact that the City and County officials..., who should have the citizens best interests at heart, have in whatever way allowed this to get this far just boggles our minds. My true thoughts are, why can’t a remote location be found? An area that has plenty of rainfall. An area that would not pose a threat to any communities in close proximity. An area that could have access to a port or pipelines or other means to transport the product. With the high intelligence that Nueces Green Ammonia LLC apparently has to build such an intricate facility, it should also have access to this same degree of intelligence to research better and find such a place somewhere other than our community. A question each of you reading should ask yourself is: To spare your community, why can’t they just erect it in MY backyard?

COMMENTS: We are opposed to this Ammonia plant being located in our neighborhood. With are right in the path of the south wind. The proposed location is not suitable for this area and needs to be moved to an industrial area. We also buy home grown chemical free vegetables which is located near the plant. I am a stage 4 cancer survivor and don't need chemicals ingested that could potentially cause issues.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: I totally disagree with this green ammonia plant been established within our city limits and in proximity to so many homes. I understand the need for green ammonia but respectfully this should be built in an area that does not have so many homes surrounding it. I live 1 mile away from the location And it would be a disaster if there was an ammonia leak. You all know the terrible side effects. It would happen if this was to occur and the long-term damage that it can do to the environment to people and to the soil, please reconsider establishing this plant in a different location that does not have , so many homes and traffic within its close proximity. Thank you.

COMMENTS: I am opposed to Permit Number 175951. Avina aka Nueces Green Ammonia is trying to produce a "zero emissions fuel" while applying for a permit to pollute the community. This is asinine! Also, these projected numbers are inaccurate because they have not been able to give the true amount of water needed for its operations. Without these, the pollution data are estimates and the true amount of emissions could push this into the territory of a major project. This is flat out fraud. To falsify information, especially in a life or death situation when these facilities fail, is beyond reprehensible. This facility is one of the first of its kind. What are the Best Available Control Technologies? TCEQ has been found to be in neglect in past cases, so how can we trust the agency now? Deny this permit and all others being proposed by Avina and upcoming hydrogen/ammonia projects.

COMMENTS: I'd like to document my personal opposition to this ammonia plant. The owner has not been transparent with the residents and has run to TCEQ for permits and approval of this project without any buy-in from the residents and its proposed neighbors. We all know the state of Texas is "open for business," but that shouldn't override our concerns and potential for harm to us. We know they have money to fly to Austin and wine and dine you all and regulators directly. But we don't have that kind of access to you to voice our concerns. I hope you deny this permit until they can prove direct benefits to this community, including increased tax revenue to the county and Robstown specifically; direct benefits to the school district it will be in, including more tax revenue to be spacing specifically by the schools; promise to maintain all the roads and highways they will be using to transport their product; and not be a burden whatsoever onto the tax payers. Additionally, proof that their product will be sold totally within the US to US customers and companies.

COMMENTS: I find the proposed location of this ammonia plant dangerous and reckless. It poses great danger to the surrounding communities. It is planned for a location that is literally hundreds of feet of a neighborhood. Where are the pipes set to be buried? This is a total disregard for the quality of life of thousands of residents not to mention their health by the smell which will emit from the production. I am strongly against the proposed location,

COMMENTS: We do NOT want Nueces Green Ammonia plant built in the proposed area. It will endanger all living near, and air quality will affect many more. Would you want one in your back yard? Texas is big enough yet to find a place away from communities. If later people decide to move close to them, that is their choice.

COMMENTS: I am opposed to the new ammonia plant coming into our area first off I have never had breathing issues until I moved to the Calallen area now I have weak, lungs, asthma, and prone to infections constantly I know this is because of the air quality out here there's no doubt in my mind I've lived in numerous states and never had this problem I have a three year-old grandson who is also asthmatic who also has numerous health issues. This ammonia plant will end up affecting our environment affecting the water supply and will make it even harder for me to breathe in him. There are numerous elderly people out here and sickly people out here that don't need more pollutants in our air . I do not want this plant coming up out here. It just will make breathing even more difficult for all of us our health would deteriorate, which is already an issue that has been looked at by media groups all over the country. Why there's so many people here born with ailments and we know it's because of the air quality Corpus Christi is known to have less Laws when it comes to environmental quality of air than any of the other areas surrounding us, this will just add havoc on all of our lungs. There has to be another way.

COMMENTS: I implore TCEQ to deny air permit #174951. Hazardous air pollutants will negatively affect myself, my family, my church family and my friends. It is unsafe for residents including children from 2 near school districts and a church at 4661 FM 1889 which is going to built only 1/2 mile from the site. The plant would emit hazardous contaminants such as Anhydrous Ammonia, Carbon Monoxide, Hazardous Air Pollutants, Nitrogen Oxides, Organic Compounds, Sulfur Dioxide. With the 2 school districts nearby and the future church that will have a playground and hold outdoor events such as VBS, This plant would expose 100's of babies and children to hazardous air contaminates. I don't want myself, my family and future grandchildren to have their health compromised because of these air pollutants.

COMMENTS: I am asking that TCEQ deny air permit #174951. Hazardous air pollutants will negatively affect myself and my family and my friends. The plant would emit hazardous contaminants such as Anhydrous Ammonia, Carbon Monoxide, Hazardous Air Pollutants, Nitrogen Oxides, Organic Compounds and Sulfur Dioxide. There are two (2) large school districts within 2 miles of the proposed plant location as well as a future church being built within 1/2 mile. These hazardous air pollutants would threaten the future health and longevity of the children attending these schools and church, not to mention residents with children and families. This is a small rural suburban family community, and we don't want to have to fear for the health and safety for ourselves and the future generation every day with the harmful air contaminates. Families have lived in this area for generations and this plant will put future generations in jeopardy of disease and illness.

COMMENTS: Absolutely unacceptable location!!! Property values will plummet, lives of people, livestock and crops will be decimated !!!! Total disregard for each and every law abiding tax paying individuals that surround this area!!! Limit this kind of activity to refinery row. This location is OUTSIDE of Corpus Christi City limits, outside of Robstown city limits and seeks only to enrich already mishandled Nueces County funds. There are property owners in the area that are generational and this will devastatingly affect them all

COMMENTS: The surrounding communities within this area are already dealing with substantial pollution due to chemical refineries in Bishop and Corpus Christi, Tx and not to mention the poison in the underground water tables. Additionally, the Uranium plant sits in Kleberg County near Riviera, Tx as well. Take your business elsewhere and plant it near your wealthy neighborhoods and quit shoving your poisonius facilities down the throats of the people in this South Coastal Bend Regions. Cancer rates are at an all time high and we don't see any of these facilities contributing nearly what they should to our school districts and communities to fund their wealth and help with health resources/research

to fight cancer or educational subsidies! Every chemical plant and refinery turns their profits and disregards the pollution laws in order to make sure their profit grows year in and year out. Go build elsewhere!

COMMENTS: I contest this application due to the potential for release of highly hazardous chemicals into populated areas. There are currently several subdivisions being constructed near the proposed site that will increase the population from current levels and raise the risk of dangers to that general population.

COMMENTS: We would like to submit a complaint on the building of the ammonia plant north of our house. We live less than a mile south where the proposed green ammonia plant is to be built. All of our research states that ammonia is a dangerous product and living so close to the proposed plant would constitute a danger for our family and our livestock. We have a small farm and ranch on county road 44 just north of Robstown which would be located south of the plant and want to STRONGLY OPPOSE the building in the location.

COMMENTS: I would like to request that TCEQ do a current air quality check. This would tell us if the allowable contaminants that are to be released by the green ammonia plant would put us over the top. I am completely strongly apposed to TCEQ granting the air quality control permit to the green ammonia plant. I live within a mile radius. I have livestock and children, it's too close!!!

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: This plant serves as nothing but a threat to life and to our community. Not only through the air, but also by the amount of water usage it needs to operate. Children, elderly, animals, crops are all within feet of this proposed plant; there is plenty of land elsewhere for this type of industry away from the city. There are ZERO positives this plant brings to our community and immediate surrounding areas. You must deny their request.

COMMENTS: I am adamantly against the Green Ammonia Plant being built in the proposed location. The proposed location is near many residential homes and neighborhoods as well as farmers. In addition to the many grain and corn fields surrounding the area, there is a farm less than half a mile that produces fruits and vegetables for the area. The ammonia plant could easily contaminate soils which could run off to nearby crop fields, both of grain, corn, fruit and vegetable's. The plant could contaminate the irrigation canals that supply water to the crops and fields, as well as livestock. A plant of this volatility and hazard should not be near homes. This will negatively affect anyone with health or breathing issues, one of my children included. I have suffered with asthma for years and one of my children has severe asthma and we are less than a mile away. Our health should not be compromised. We moved to this area for a reason, because it is away from the refineries and plants. We moved here for the clean air, being outside of the City limits. This sort of plant needs to be located several miles from any residential dwelling, crop fields and livestock. The risks to health and safety are too great to locate in the current proposed location.

COMMENTS: I have lupus and expected to live my life out in my house 2 miles down the road. Now I'm concerned about an accident from Avina. I lived in Houston when an ammonia truck overturned on 610 loop and hwy 59. I saw the damage just a tanker can do. We don't want Avina in our area. Diane Baker.

COMMENTS: I oppose the ammonia plant and the air pollutants it will bring to our community. This will drastically affect our community's health. My son attends Calallen high school, my mother is a resident at Windsor Calallen nursing home, and my sister and her family are in the Wood Estates subdivision in Calallen. These are all in very close proximity to the proposed ammonia plant. My husband's specialty medical practice is also nearby on Northwest Blvd where he and I both both work. I have adult asthma, and I am very concerned with how this will affect my health and my ability to continue to work and serve the citizens in Calallen and the citizens of the surrounding areas. The ammonia plant is harmful to our health whether we have existing health conditions or not.

COMMENTS: As a citizen of Nueces County, I object to the proposed ammonia plant. There has been very little transparency on this plant. This plant will affect the air quality. It will also affect the water quality affecting human consumption which can cause internal organ damage. Aquatic animals are unable to excrete the toxins, therefore killing them. It also can damage vegetation and crops. This plant should not exist for the sake of economically boosting the community. Illness and death are not prices to pay for the "benefit" of the city and county. Within a couple of miles are daycares, nursing homes, schools, farms, and the Nueces River. My husband's medical practice is nearby, my mom's nursing home is nearby, my sister and family are nearby, my son's school is nearby, and so are hundreds of other family and friends. The application for this plant is very vague. We demand a public meeting to address the concerns of the community.

COMMENTS: I am completely against the ammonia plant. The harmful toxic chemicals along with ammonia that will be released and the smoke stacks that will be located on the property that will be releasing this into the air close to homes, Nueces county park, and neighborhoods is not wanted. I have two small children one who plays tball at the Nueces Co park in the afternoons that sits maybe less than a mile from this plant. In the event that an ammonia accidental release into the air happens it will be catastrophic to anyone caught outside including during the evenings when my son is playing and my daughter is in her stroller... NO ONE can guarantee there will never be an accident . The health and safety from the release of these toxins close to use poses a threat not only to my children but to the HUNDREDS of children in the park and the health, safety of the communities!

COMMENTS: I am opposed to the Nueces Green Ammonia plant and I'm asking the denial of air permit #174951. This plant and its pollution poses a threat to myself, my family, my community members including our most vulnerable the children and elderly. Especially for the children who attend school and play t ball at the park less then a mile away. The plume from any releases whether strategic or accidental will be detrimental and uncontrollable. The plume is at the mercy of Gulf breezes and seasonal fronts.

Re: Nueces Green Ammonia LLC
Proposed Air Quality Permit Number 174951

Executive Director:

I am writing this letter to "Executive Director" because the name of the director did not appear in the letter sent to me by the commission.

I received the letter and have read it. I saw the list of emissions for the proposed facility. The letter also states, "The executive director has made a preliminary decision to issue the permit because it meets all rules and regulations." It also states, "The facility's compliance file, if any exists,". Does the compliance file exist or not? I also understand this permit is referring to air quality.

Just because the proposed facility ". . . meets all rules and regulations.", does not mean it can operate safely in the proposed location.

Draw a circle with a radius of four miles surrounding the proposed site and then see how many schools, hospitals, water treatment plants, water sources, nursing homes, outdoor sports facilities, apartment complexes, places of business and individual homes fall within that circle.

I live northwest of the site and our predominant wind direction is from the southeast during the spring and summer. When frontal systems come during the fall and winter those winds would carry the emissions directly into the city of Robstown.

Would transportation of the end product be via trucks or pipeline? What are the other hazardous wastes to be dealt with and how will they be transported and handled? The overall environmental impact needs to be considered also, not just air quality.

It is my understanding that the "charge" or source for the plant would be water. That is the overwhelming concern. We are in an area where having enough water is a constant concern. We have water from two lakes that are currently at less than twenty-six percent capacity. In addition to that we have a pipeline that brings raw water in from over one hundred miles away just so we can meet current use. Desalination has also been proposed just to meet the need for water in this area and even that has environmental waste concerns.

I realize this is an "Air Quality Permit", but since you are the "Texas Commission on Environmental Quality", I have addressed the other concerns in this letter. I believe overall environmental quality is much more important than just air quality. The other concerns listed above need to be examined closely to determine whether or not the plant should be in this location.

I believe the officials involved in the permitting of the proposed plant as well as officers of the company who want the plant to be built should come to the area and tour it by car. Even though the site itself is currently open farm land they need to see the people whose lives will be changed by the environmental impact of the proposed facility. Better yet, they may want to

purchase a home and live in the area around the plant where the environmental impact will be the greatest.

Thank You;

A handwritten signature in cursive script, appearing to read "Dennis L. Denman".

COMMENTS: Questions: How many schools, nursing homes, public water supply sources and filtration plants, and residences are within a four mile radius of the proposed site? What environmental impact will there be an air and water quality? If charge and end product are not up to spec can they be recycled through the plant until they meet spec or are they burned off with a flare that can be seen and heard for miles while polluting the air (like the one on McKinzie road)? Would everything associated with the facility be handled in pipelines or would there be trucks and/or rail cars carrying hazardous materials to or from the plant? We live approximately two miles Northwest of the proposed site and our prevailing winds are from the Southeast (yes, air quality is a major concern).

COMMENTS: I am against the Nueces Green Ammonia Plant on CR 46 and FM 1889 due to health and safety hazards. I am a property owner of 6 parcels of land on CR 73 between CR 46 and CR 44. Some of the property is in farming for crops and others have grazing cows and horses as well as our personal residence. With that being said the crops are used for human consumption, the cattle are being used for human consumption. An ammonia plant less than a mile away endangers the life and safety of the local residents. It endangers the general public who consume local agricultural products. For the safety of the public I propose the plant to be relocated to a less populated area. I only noticed the posted signs last week and I travel that road every day, the wind had blown most of the English signs down. It was very difficult to find out what was happening. Letters should have been sent out to all residents in the area. I want to be informed and included on a mailing list for all activity with this project proposal. Thank you Deborah Donald

COMMENTS: This is not an appropriate place for this type of plant. It is too close to neighborhoods and schools. The smell would negatively impact our area and could potentially cause health problems. Additionally, I believe a plant of this nature would cause a decrease in property values due to possible odor and health issues. Please consider another location for this plant.

COMMENTS: In my opinion, there are plenty of places further out of town that will not interrupt traffic flow and cause future health problems for our families, children and elderly. With all the plants we already have not far down the road the air quality is already poor as is the water. Adding an ammonia plant here of all places seems completely unethical. I also request to be informed of any future decisions being made regarding the ammonia plant.

COMMENTS: Environmental impact. Many birds and wildlife nearby. Health impact. Many children nearby. Community impact.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: I was born and raised on family land about 1 mile from this proposed disaster. The people that live in this area are hard working , life long residents. They deserve to be informed about all issues in a timely manner. Who the heck thinks that any part of this is a good idea?? South Texas has been on water restrictions for the past couple of years; where will this water come from? This is NOT an industrial area. Please stop this now!!!!

- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: I Alan Flores am protesting the permit application of permit 174951 on the Nueces Green Ammonia LLC. this is mainly due to the proximity location of the city of Robstown and North Corpus Christi Residences including the rule communities of River Acres, Quail Valley, and all others along the Nueces River Calallen area. The prevailing Southeast winds during the spring to fall would affect the Calallen and Nueces River residents and the North to Northwest winds would affect the Robstown community if there was at any time a release of ammonia or any other dangerous substances would be disastrous to the community. with this I Alan Flores resident of the affected area object

to this building of the Ammonia facility in this area and ask the state of Texas to look into with studies and community input before issuing an air permit.

COMMENTS: I will be doing an open records request for documents submitted by the City / CM Zanoni as CM Peter Zanoni has a long history of publishing and submitting fraudulent financial statements to defraud municipal bond holders, underwriters, banks, state/federal agencies, etc...Corpus Christi Texas City Manager Peter Zanoni is hiding the theft of \$100 MILLION under his watch as the budget director for the City of San Antonio Tx.... He defrauded the court, "cooked" the books and participated in years of illegal meetings when whistleblowers were banned to silence them... The law firm of FeganScott has filed a class-action lawsuit naming the City Of San Antonio Tx. I provided them with proof of a fraud on the 57th District and Federal courts committed to conceal three decades of theft / fraud involving \$100 million and other crimes I uncovered as the City's Telecommunications Manager. There is no statute of limitations concerning this fraud on the court. The statute is tolled concerning the stolen \$100 MILLION due to the ongoing RICO criminal coverup... GO TO WWW.CASTROGATE.COM ... READ THE CHAPTERS AND THEN CLICK ON THE LINK PAGE AT THE BOTTOM OF THE INDEX TO SEE ALL THE PROOF

Public Servants ;

San Antonio Texas City Hall , Bexar County, state officials, the local media and others have been concealing the fact that \$100 million must be returned to taxpayers, grantors and bond reserves as over the past decades the money was secretly, illegally spent in violation of the law, the City Charter, OMB regulations, the local government code and other rules. Money cannot be spent without taxpayer knowledge and approval but since 1982 City officials and employees used an internal telephone billing

account - "the variable" to secretly siphon funds from city, county, state, federal and grant funds to fuel numerous criminal schemes that benefitted many people.

I warned City officials before they hired Peter Zaroni as the City Manager but I was ignored. When I recently reported developments in our efforts to expose and halt the ongoing criminal coverup, Councilman Mike Pusley told me to remove him from my mailing list. Citizens will continue to contact city officials in an effort to protect our money and our homes. Some criminals left San Antonio Texas and have positions in Corpus Christi (Zaroni), Austin (Broadnax), Uvalde (Roland Gutierrez), Wilson County (Whitman) and our state legislature (Bernal, Lopez, Cortez). Citizens are working to expose ALL the criminals in their new positions. The fake news media in San Antonio Texas has helped cover up the criminal activity but we are working with social media, the media, etc. across South Texas to expose the criminal coverup to taxpayers. We are contacting every county, state and federal agency that Zaroni can defraud. We are contacting companies, agencies, organizations, developers, etc. doing business with Zaroni. The many opponents to the desalination project will receive proof of Zaroni's criminal acts and ongoing coverup. If you won't protect our money, our freedoms and our homes we will.

The law firm of FeganScott has filed a class-action lawsuit naming the City Of San Antonio Tx. I provided them with proof of a fraud on the 57th District and Federal courts committed to conceal three decades of theft / fraud involving \$100 million and other crimes I uncovered as the City's Telecommunications Manager. There is no statute of limitations concerning this fraud on the court. The statute is tolled concerning the stolen \$100 MILLION due to the ongoing RICO criminal coverup. Corpus Christi, Texas City Manager Peter Zaroni is named in the documents for his part in the ongoing RICO criminal coverup, fraud on our judicial system, "cooked" books, bond/grant fraud and other crimes.

As the City's new telecommunications Manager, I uncovered and reported massive theft and fraud going back decades involving about \$100 million. The theft reached a point where there was no money left to repair our failing 911 system putting lives at risk. When I refused to help cover up the criminal activity I was defamed, terminated, denied a fair whistleblower trial in the corrupt 57th District Court of Judge Antonia Arteaga, banned from City Hall and public meetings for four years, denied a fair Civil Rights / Free Speech trial in the corrupt Federal Court of Judge Xavier Rodriguez, defamed in the media, harassed by city / county officials, harassed by SAPD / BCSO and threatened. Judges and attorneys continue to defraud our judicial system and deny justice to many other citizens. The RICO criminal coverup continues.

In 2005 during a Municipal Integrity Investigation into allegations of fiscal fraud Budget Director Peter Zaroni expressed concern about the internal telephone variable billing account. Zaroni stated that of all city department the IT Department was the most difficult to work with. A statement he repeated numerous

times. He acknowledged that there was no strict accountability of the internal fund. He stated that during the recent budget cycle the IT Department kept changing their revenue projections to such an extent that he did not have much confidence in their numbers. Zaroni stated that the City contracted with a company to analyze the IT department's billing practices and made several useful recommendations to tighten up the unregulated billing practices. He stated that it appears as if none were followed. Despite knowing of the unregulated billing practices and having no confidence in fiscal reports from the IT Department for many years prior to 2005, Budget Director Peter Zaroni took no action whatsoever. He did not demand a complete audit, contact Municipal Integrity, bring his concerns to city officials or did not express his concerns to outside auditors, grantors, state/federal agencies or anyone else. He did nothing. Year after year he collected his salary and did nothing. When I was being harassed and defrauded he did not help me. When I was illegally terminated he remained silent. At my whistleblower trial he then helped the City conceal three decades of fraud and theft involving \$100 million while making me out to be the bad city employee to protect himself. The SA Current reported the fact that : " Budget Director Peter Zaroni comes across as a pretty idiot savant who cannot address a minutiae about the budget without any clarity". Zaroni was promoted as the City and County promote from within as they cannot bring in outsiders who would expose the ongoing RICO criminal coverup. His criminal acts were rewarded with money and titles.

will try to post most correspondence with officials, agencies, organizations, media and others. Go to WWW.CASTROGATE.COM. Read the chapters and then click on the "LINK PAGE" at the bottom of the index to see all the proof and updated information in numerous folders. I am providing a sampling of documentation with this letter and I can provide additional documents, emails, recordings, audits, court transcripts, etc. I am ready to meet and talk with you. I will sign an affidavit and will testify under oath in court. Follow me at WWW.FACEBOOK.COM / JEF SR Thank you.

COMMENTS: There are many reasons why we don't want this ammonia plant built within our residential community! First and foremost, this is a residential community!!! This is no place for an industrial ammonia plant that will compromise our air quality, deplete our water resources, and put our community at high risk as there will be a mistake at some point that will result in an explosion/disaster for our community. With the current plan for the desalination plant, our Bay ecosystem will be destroyed! This agenda is ALL wrong for placement in this proposed area. This plan is not good for Robstown & Calallen residents. Period.

COMMENTS: We moved our family to this area just outside the city limits of Corpus Christi to enjoy a rural, peaceful lifestyle with fresh air and good schools to send our children to. We are really unhappy that you are even considering this area as it is far to close to multiple large subdivisions, multiple school districts (Calallen & Robstown ISD's) with elementary schools, intermediate schools, and high schools. We demand to have a public meeting to address our concerns as Calallen is a nice area to live and we don't want this smelly ammonia plant here along with the danger of explosion that it will bring so close to thousands of peoples homes and schools. It appears there has been some attempt to sneak this into our area, and it is terrible placement as Texas has so much open space that is not subdivided and this could easily be placed elsewhere so as NOT to be so very close to tax paying citizens. Along with the ridiculous amounts of water that this plant will use up on a daily basis. We demand a public meeting to express our concerns!

COMMENTS: We moved our family to this area just outside the city limits of Corpus Christi to enjoy a rural, peaceful lifestyle with fresh air and good schools to send our children to. We are really unhappy that you are even considering this area as it is far to close to multiple large subdivisions, multiple school districts (Calallen & Robstown ISD's) with elementary schools, intermediate schools, and high schools. We demand to have a public meeting to address our concerns as Calallen is a nice area to live and we don't want this smelly ammonia plant here along with the danger of explosion that it will bring so close to thousands of peoples homes and schools. It appears there has been some attempt to sneak this into our area, and it is terrible placement as Texas has so much open space that is not subdivided and this could easily be placed elsewhere so as NOT to be so very close to tax paying citizens. Along with the ridiculous amounts of water that this plant will use up on a daily basis--We are in a drought in this area, this would be terrible for our water situation also! We demand a public meeting to express our concerns!!!

COMMENTS: I vehemently oppose the approval of this permit. This is ludicrous. There are schools out here, nursing homes and countless residences. Why would anyone think it is ok to build something this dangerous on this property. There is countless land available south of here in the middle of nowhere where something like this would be more appropriate. I beg of you to please deny this permit.

COMMENTS: As someone who will live literally less than a mile from the proposed Ammonia Plant I am so against it. Less than 15 miles from here will also be a lithium mining Tesla plant. Less than 20 miles away are many Oil refineries.. its too much. I have 3 small children all of which play outside every single day and attend school that will be less than 3 miles from the ammonia plant.. I plead for this not to be built here.

COMMENTS: This facility is far too close to residential homes, numerous public schools, libraries, and care facilities for the elderly. Even under the most highly regulated and controlled conditions, the emissions from this facility will have severely detrimental impact on the health of thousands of residents. Catastrophic failure of ammonia plants have, in the recent past, cause massive casualties, loss of life and destruction of property. This facility cannot be allowed to develop in this close of proximity to residential homes, schools and care facilities. Doing so would amount to reckless endangerment of human lives of the residents of Corpus Christi and neighboring areas. Sincerely, Dr. Greg Frederick

COMMENTS: I am writing to express my concerns regarding the Nueces Green Ammonia Plant. In considering the locale, I wonder why anyone would think this is a good location. It is in a highly residential area with several schools nearby. There are also many elderly in the vicinity. Considering the health impacts of ammonia on these vulnerable populations, I ask that this permit be denied. They can certainly find a more remote location.

COMMENTS: This proposed facility is too close to schools and homes AMD would have a very negative health impact on the vulnerable population of children and elderly persons. Please do not allow this plant to be built! The ammonia, CO₂, and other dangerous chemicals should never be allowed so close to a growing community! This will negatively impact not only the health of nearby residents, it will also negatively impact property values in the vicinity. I strongly oppose this!

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: To whom this may concern, I'd like to express my concern and disapproval of this ammonia plant being proposed in Robstown, Tx. My name is Alexis Garcia and I'm a 27 year old mother of 2 children by the names of Aiden(2) and Alivia(8 months). My husband and I settled our roots down in this area because we loved the strength of the community, the school districts, the safety and security of this town, most important because we love this environment! By bringing this Ammonia plant to our neighborhood we lose the feeling of safety and security. We risk the health of ourselves and our two small children. We lose the love for our environment and agriculture. I ask that you consider the lives of those in this town who have worked so hard to create a Successful life here for themselves and their families. Those who have children who attend school within the proximity of this proposed plant. Those who will be forced to choose between leaving this town for the sake of their health or staying because the life they worked so hard for is here. As a parent, as a friend, as a human... please consider the facts and health risks of this proposed plant and how this could be so detrimental to the lives of those who live in this strong community. No amount of money can bring back those who are lost due to something that could have been prevented. Thank you

COMMENTS: I would like to protest this permit. It will not only be within 3 miles of local schooling it will also stop all future development in the calallen area. For families who have currently live here it will impact not only their health but also all property value in the area. I understand the need for energy growth but for it to be so close to hundreds of families homes is concerning.

COMMENTS: I am apposed to having an ammonia plant being located very close to my residence. Ammonia is considered a high health hazard because it is corrosive to the skin, eyes, and lungs. Exposure to 300 parts per million (ppm) is immediately dangerous to life and health. Ammonia is also flammable at concentrations of approximately 15% to 28% by volume in air. This plant will be a target for foreign enemies trying to disrupt the interstate traffic. You are putting countless lives in danger with this proposed site.

COMMENTS: Good evening! I am writing to you that I live in the Calallen area where Avina is planning to build an ammonia plant. I totally oppose this plant because I am concerned about how it will affect our environment within our community with its toxic chemicals especially if the plant has an accidental leak or explosion. These fumes will cause respiratory problems for everyone within Robstown/Calallen also making it worse for people who have severe respiratory issues. Also, we are in a drought and we don't need this plant to be taking our water needed for us residents when we need it the most. Speaking of water, I wouldn't want Avina to be dumping their toxic waste into our river that provides our water supply which wouldn't be safe and not to mention a cruel thing to do to us. We have schools that are close by and don't need my children and other children to be breathing in that poison or be caught in a plant explosion or leak while attending school. Would you want to have your kids attending school near a plant like that? Same thing with all residents within this area. Calallen is known to be a great and beautiful neighborhood with more natural landscape than the rest of Corpus Christi with the river and numerous country fields and trees, but if you bring this ammonia plant, it will ruin our beautiful neighborhood environment. Please do not destroy both Robstown and Calallen with this ammonia plant. Do not build this ammonia plant in our neighborhood, please! Thank you!

COMMENTS: I have concerns about the impact of this project on the surrounding environment/community. Contamination of drinking water and decreased air quality is a concern for this project. Drinking water resources border the land designated for this project. Air quality from an additional factory's output will put this area at high risk for an even higher prevalence rate of asthma in children who grow up in this area. The only solution for these issues will be to build this plant in a more remote location, where fewer residents will be effected by these pollutants.

COMMENTS: I believe that TCEQ has not done it's duty and is only relying on Avina's numbers, data, modules and research to make it's decision. TCEQ needs to do its own work and and not rely on a private entities information. You guys need to do your job because when this leaks or gets out in any way this is going to be detrimental for this entire community and Coastal Bend area. Think about the lives you are responsible for, think about the consequences and know that you'll be held responsible TCEQ, state of Texas Avina when an accident occurs. Its not if it occurs it will occur. Do your job.

COMMENTS: I protest the building of this or any chemical plant near family residential and school areas. The amount of hazardous accidents that have happened in my time within this city alone has shown that having such a facility near where children are born, raised, and educated is harmful to the wellbeing of our current and future residence. Not to mention the decreasing of land value and possible tax revenues in the future for the benefit of city funding and development. Don't build poison producing plants or manufacturers near your citizen's homes.

COMMENTS: I am writing to formally express my opposition to the approval of TCEQ Permit No. 174951 for NUECES GREEN AMMONIA LLC. My objections are based on several critical points related to economic, social, and infrastructural impacts that this project may have on our community.

- 1. Economic Impact on Local Businesses** The proposed development by NUECES GREEN AMMONIA LLC poses significant risks to the economic stability of existing local businesses. The introduction of a large-scale industrial operation can lead to market monopolization, where smaller, locally-owned businesses may be unable to compete with the pricing and production capacities of a large entity. This could result in the closure of small businesses, leading to job losses and a decrease in the diversity of our local economy. Additionally, the influx of a large corporation might drive up the cost of living in the area due to increased demand for housing and services, potentially displacing long-term residents and small business owners.
- 2. Strain on Public Infrastructure and Services** The proposed facility will likely place a considerable strain on our already overburdened public infrastructure. The increase in heavy vehicle traffic for transportation of materials and products will exacerbate wear and tear on our roads, necessitating more frequent and costly repairs. This will divert public funds from other essential services such as education and healthcare. Moreover, the project may demand increased utility services (water, electricity, sewage), which could lead to higher utility rates for local residents and businesses due to the required upgrades and expansions of these services.
- 3. Public Health and Safety Concerns** The operation of an industrial facility such as the one proposed can pose significant risks to public health and safety. Accidents involving hazardous materials, mechanical failures, or other unforeseen incidents could result in serious harm to workers and nearby residents. The presence of such a facility also necessitates the implementation of robust emergency response plans, which could overwhelm our local emergency services, reducing their ability to respond to other incidents effectively.
- 4. Social and Community Disruption** Large industrial projects can disrupt the social fabric of communities. The construction and operation phases often bring an influx of temporary workers, which can lead to short-term housing shortages and increased rental prices. This can strain local resources and create tension between long-term residents and transient workers. Furthermore, the social dynamics of the community might change, with potential increases in crime rates and a shift in community identity, as large-scale industrial projects often do not integrate seamlessly into smaller, close-knit communities.
- 5. Potential for Economic Inequity** The benefits of the proposed facility are unlikely to be evenly distributed across the community. While NUECES GREEN AMMONIA LLC may create some jobs, it is likely that these positions will require specialized skills that current local residents may not possess, leading to an influx of workers from outside the community. This could result in economic inequity, where the benefits of the project accrue to a small group of individuals or to those outside the community, while the broader population bears the costs.
- 6. Long-Term Economic Sustainability** The long-term economic sustainability of relying on a single large industrial entity is questionable. Diversifying our local economy by fostering a variety of small and medium-sized enterprises can provide more stable and resilient economic growth. In contrast, an over-reliance on a single industry can lead to economic vulnerability, especially if market conditions change unfavorably for that industry.
- 7. Effect on Property Values** The presence of a large industrial facility can negatively impact residential property values in the vicinity. Potential buyers may be deterred by the proximity to an industrial site, leading to a stagnation or decline in the real estate market. Current homeowners could face reduced equity in their homes, impacting their financial security and reducing the attractiveness of our community as a place to live.
- 8. Quality of Life** The introduction of a large industrial facility can significantly diminish the quality of life for local residents. Increased traffic, noise, and industrial activity can lead to a less peaceful and enjoyable living environment. The potential for round-the-clock operations means that disruptions could be a constant issue, affecting daily life and well-being.
- 9. Impact on Local Culture and Heritage** Nueces County has a rich cultural and historical

heritage that could be adversely affected by the industrialization brought about by this project. Large-scale industrial developments can lead to the loss of historical sites and diminish the cultural landscape that makes our community unique. Protecting our heritage is crucial for maintaining a sense of identity and continuity for future generations.

10. Community Cohesion and Engagement The approval and construction of this facility could lead to a fracturing of community cohesion. Differing opinions on the project's benefits and drawbacks can create divisions among residents, reducing social unity and collective community engagement. It is essential for community development initiatives to enhance rather than disrupt community cohesion.

Conclusion In light of these concerns, I strongly urge the Texas Commission on Environmental Quality (TCEQ) to reject the permit application submitted by NUECES GREEN AMMONIA LLC. The potential economic, social, and infrastructural impacts on our community outweigh the proposed benefits. It is imperative that we prioritize sustainable, inclusive, and community-focused development strategies that align with the long-term well-being of our residents and local businesses. I appreciate the opportunity to provide my comments and hope that the TCEQ will carefully consider the implications of approving this permit on our community. Respectfully, Omar Gomez & Frank Gomez Calallen, TX

COMMENTS: My name is Melanie Grant, and I live in Robstown/Calallen community. My husband and I have lived in our home for 15 years, raised 2 daughters, and have been anticipating retirement. My husband has spent 40 years building his own business, and we have seen many economic ups and downs through the years. We purchased our “diamond in the rough” home when we moved out here with the hopes that one day we would be able to sell our property for a nice profit and build a little retirement home, and maybe have a bit left over to supplement our social security. I’m afraid our dream may never be recognized if we allow the Avina Ammonia Processing plant the opportunity to plant its roots in the middle of our community. The damage this industry will inflict on our property values may make it impossible to sell our homes for any profit at all. Not only will we be risking the devaluation of our properties, we will also be endangering the lives and livelihood of many of our residents. Our farmland would suffer, our health will suffer, and the potential for deadly ammonia leaks, or explosions is a very real possibility. The number of “permanent” jobs (75-100) is not worth jeopardizing our entire community for. Therefore I am imploring you to REJECT any permits Avina is requesting. There are thousands of acres of land that are more suitable for this type of industry, not smack dab in the middle of our newest upcoming neighborhoods, or businesses. I thank you for your consideration, Most Sincerely, Melanie Grant

COMMENTS: I would like to contest the issuance of permits for this proposed Ammonia Processing plant. This type of industry should be placed nowhere near any residential areas, schools, or businesses. There are thousands of acres in rural areas that would be better suited for such an industry. Not only will this affect the value of our properties, but could potentially pose grave health risks. Not only that, but the potential for an explosion could cause numerous deaths and property destruction. Have we not been put through enough with Covid. To live in fear of a disaster would/could be mentally devastating for some. I urge you to find a more suitable location for this business.

COMMENTS: I am not for the new ammonia plant being able to be built on Highway 1889 for numerous reasons but I would like to mention a couple .It will be in close proximity to churches , residents and businesses that could potentially face harm if leaks occur . The amount of water usage is ridiculous especially with the shortages we have already in this area . Texas has the largest amount of deaths/injuries from hazards at ammonia plants and we do not want that to happen here in our area . Thank you !

COMMENTS: As the Pastor of ChristCentral Baptist Church, I want to express our deep concern for the proposed ammonia plant by Avena on FM 1889 in Robstown. Our church family owns 12 acres of land just north of the cemetery on 1889 and is within 1 mile of the proposed site. While we do not have buildings on that property today, we dream of being able to build a church facility there to accommodate our growing church. To our immediate west & north is a 90 acre tract of land that is future residential homesites as I understand it. The potential impact on our church family should this plant be built there. An ammonia leak of any kind would put our congregation at great risk as the prevailing gulf winds would blow that right on top of us. We currently do have a baptistery there and we host church picnics and baptisms there. Not only that, there are existing homes and farms surrounding us, to the north up 1889 is a medical kidney dialysis center, a nursing home, not to mention an entire neighborhood of thousands of people in Wood River subdivision. I know the company says they will be safe, but we've lived here too long and know the reality of chemical spills and leaks even under the most stringent of conditions. We are deeply concerned for the plants proposed water usage of 7 million gallons of water a day to make ammonia which will tax our already gravely depleted water supply in the Corpus area. Please do not grant this permit to allow the project to continue. Sincerely & respectfully submitted, Pastor Ralph Green ChristCentral Baptist Church

Subject: Proposed Ammonia plant on FM 1889 Robstown

To whom it may concern;

Respectfully, I would like to express my concern & opposition to the proposed ammonia plant on FM 1889 Robstown. As the pastor of ChristCentral Baptist Church that owns 12 acres of property very close to the proposed sight, just north between CR 44 & CR 50. Someday we plan to build our church campus there. The risk this poses to our church family & particularly our youth & children we believe is unacceptable. With a prevailing Gulf Breeze from the Southeast of our property, even a small leak could be catastrophic to our ability to exercise our right of worship according to conscience. I'm just now learning about this proposal so I am deeply concerned we've not been formally notified by any authority having jurisdiction about this proposal and have no idea how far along this process has gotten.

I would appreciate discussing this with someone as quickly as possible.

Sincerely,

Pastor Ralph Green - Cell 304-559-3548
ChristCentral Baptist Church

COMMENTS: I am writing to formally express my opposition to the approval of TCEQ Permit No. 174951 for NUECES GREEN AMMONIA LLC. My objections are based on several critical points related to economic, social, and infrastructural impacts that this project may have on our community.

- 1. Economic Impact on Local Businesses** The proposed development by NUECES GREEN AMMONIA LLC poses significant risks to the economic stability of existing local businesses. The introduction of a large-scale industrial operation can lead to market monopolization, where smaller, locally-owned businesses may be unable to compete with the pricing and production capacities of a large entity. This could result in the closure of small businesses, leading to job losses and a decrease in the diversity of our local economy. Additionally, the influx of a large corporation might drive up the cost of living in the area due to increased demand for housing and services, potentially displacing long-term residents and small business owners.
- 2. Strain on Public Infrastructure and Services** The proposed facility will likely place a considerable strain on our already overburdened public infrastructure. The increase in heavy vehicle traffic for transportation of materials and products will exacerbate wear and tear on our roads, necessitating more frequent and costly repairs. This will divert public funds from other essential services such as education and healthcare. Moreover, the project may demand increased utility services (water, electricity, sewage), which could lead to higher utility rates for local residents and businesses due to the required upgrades and expansions of these services.
- 3. Public Health and Safety Concerns** The operation of an industrial facility such as the one proposed can pose significant risks to public health and safety. Accidents involving hazardous materials, mechanical failures, or other unforeseen incidents could result in serious harm to workers and nearby residents. The presence of such a facility also necessitates the implementation of robust emergency response plans, which could overwhelm our local emergency services, reducing their ability to respond to other incidents effectively.
- 4. Social and Community Disruption** Large industrial projects can disrupt the social fabric of communities. The construction and operation phases often bring an influx of temporary workers, which can lead to short-term housing shortages and increased rental prices. This can strain local resources and create tension between long-term residents and transient workers. Furthermore, the social dynamics of the community might change, with potential increases in crime rates and a shift in community identity, as large-scale industrial projects often do not integrate seamlessly into smaller, close-knit communities.
- 5. Potential for Economic Inequity** The benefits of the proposed facility are unlikely to be evenly distributed across the community. While NUECES GREEN AMMONIA LLC may create some jobs, it is likely that these positions will require specialized skills that current local residents may not possess, leading to an influx of workers from outside the community. This could result in economic inequity, where the benefits of the project accrue to a small group of individuals or to those outside the community, while the broader population bears the costs.
- 6. Long-Term Economic Sustainability** The long-term economic sustainability of relying on a single large industrial entity is questionable. Diversifying our local economy by fostering a variety of small and medium-sized enterprises can provide more stable and resilient economic growth. In contrast, an over-reliance on a single industry can lead to economic vulnerability, especially if market conditions change unfavorably for that industry.
- 7. Effect on Property Values** The presence of a large industrial facility can negatively impact residential property values in the vicinity. Potential buyers may be deterred by the proximity to an industrial site, leading to a stagnation or decline in the real estate market. Current homeowners could face reduced equity in their homes, impacting their financial security and reducing the attractiveness of our community as a place to live.
- 8. Quality of Life** The introduction of a large industrial facility can significantly diminish the quality of life for local residents. Increased traffic, noise, and industrial activity can lead to a less peaceful and enjoyable living environment. The potential for round-the-clock operations means that disruptions could be a constant issue, affecting daily life and well-being.
- 9. Impact on Local Culture and Heritage** Nueces County has a rich cultural and historical

heritage that could be adversely affected by the industrialization brought about by this project. Large-scale industrial developments can lead to the loss of historical sites and diminish the cultural landscape that makes our community unique. Protecting our heritage is crucial for maintaining a sense of identity and continuity for future generations.

10. Community Cohesion and Engagement The approval and construction of this facility could lead to a fracturing of community cohesion. Differing opinions on the project's benefits and drawbacks can create divisions among residents, reducing social unity and collective community engagement. It is essential for community development initiatives to enhance rather than disrupt community cohesion.

Conclusion In light of these concerns, I strongly urge the Texas Commission on Environmental Quality (TCEQ) to reject the permit application submitted by NUECES GREEN AMMONIA LLC. The potential economic, social, and infrastructural impacts on our community outweigh the proposed benefits. It is imperative that we prioritize sustainable, inclusive, and community-focused development strategies that align with the long-term well-being of our residents and local businesses. I appreciate the opportunity to provide my comments and hope that the TCEQ will carefully consider the implications of approving this permit on our community. Respectfully,

Jennifer Cox

COMMENTS: I am opposed to the ammonia plant plant! The ammonia and other hazardous air pollutants will negatively affect me and my family. We do not support this in our community.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: Corpus Christi air quality is already negatively affected by the refineries and plants in this area. These plants flare and spew toxins, but we shouldn't complain because TCEQ says that they emit acceptable levels. Port of Victoria had a chemical spill(only 300 barrels of mixed crude oil) in January and yet the entire city of Corpus Christi, Robstown, Calallen, Annville areas could smell the ammonia like odor. This incident happened nearly 100 miles away from my front porch and I could smell it. We received no warning to shelter in place, no alerts to let us know what was causing the odor. Residents had to reach out to news stations and social media for answers. Avina says they will have air quality monitors at the facilities perimeter, but will the fumes even reach the monitors before dispersing into our environment? Corpus Christi is one of the windiest cities in Texas. You may not care because you don't live in this area, but we don't want to be breathing in cat piss scented ammonia.

COMMENTS: This plant is planned to be built less than 100 yards from our home, and many other homes in the area. Concerns for health risks, air quality, property value, noise levels, traffic, and overall safety are a large concern. The talk of this plant being built has and will plummet the value of all home and land in the area, some of which have been in our family for over 100 years. Not to mention the fact that no one in the area has been formally notified of any plans to build this ammonia plant.

COMMENTS: I don't think having a plant so close to a neighborhoods schools, retirement homes and daycares is the right thing to do, since we already have enough plants polluted the air like the refineries and STX. we have enough cases of cancer to add one more plant that caused more breathing problems in our community.

COMMENTS: I think it is a big concern, having any kind of plant or refinery so close to homes and businesses. There is so much more land in other areas that this could be located, why in the world would anyone even consider putting something like this in a populated area? Any plant is going to have pollution, there is no way around that, and in town is not the place to put one. Whomever brought this to the table did not do any research or did not even consider anyone other than looking at getting this built and how much money they will make in the end. The bottom dollar is the only thing that has been considered, that is obvious or else another location would have been picked. The community, people, businesses, schools and future growth are not even something that the ammonia plant cares about and never will. I am not even sure that letting the community comment on this will even make a difference or that the higher-ups will even care what we think. But we must still use our voice and at least we can say we tried.

COMMENTS: The classification of this ammonia plant being a "Green" plant due to its use of ONLY renewable energy is either a lie or is ignorance - According to the ERCOT website, Texas does not have 3.5 GigaWatts/Yr of surplus renewable energy. Therefore - ALL energy consumed by this plant MUST be generated by fossil fuels - The resulting additional air emissions are charged to this new user! This site must use compressors and pumps to move the ammonia vapor and liquid around - it doesn't move because it is nice!! All these pumps and compressor have moving parts and therefore some type of shaft seals. Even with "Best in class technology" shaft seals leak. You can expect 1cu-ft per day per inch of shaft diameter NORMAL leakage. This normal leakage must be included in the normal annual leakage totals. The pumps and compressors must also receive routine annual maintenance necessitating venting and purging the ammonia from the equipment - THESE emissions are routine, scheduled annual maintenance activities and these emissions should be included in the normal annual, operating emissions. Compressors of this size and type will typically contain 1400 - 1500 cu.ft. of gas in the compressor and associated piping, pulsation bottles, suction and discharge drums. Pumps and associated casings and piping will typically contain 30-35 cubic feet of liquid. NONE of these routine equipment venting amounts are included in the air permit application. Several statements have been made as to the presence of two "Flares" to handle released ammonia. Two independent Safety Data Sheets and a Technical Data Sheet, randomly accessed from the internet, one from an ammonia manufacturer and the other from a user BOTH state that ammonia "MUST BE DESTROYED IN INCINERATORS SPECIALLY DESIGNED FOR AMMONIA" it was noted that standard flaring will result in the production of hazardous combustion by-products as hazardous as the original ammonia. The required incinerator high temperatures must be maintained at all times - this also results in additional air emissions in the consumption of a significant amount of Natural Gas. Avena is obviously NOT using best available technology!!! This is either another lie or another serious mistake!! Avena's statement about the Hydrogen/Nitrogen reaction being exothermic is very revealing! The production of copious amounts of steam to be used for driving equipment is also telling. To get the unit started-up, before steam, ALL the blowers, compressors, boiler feedwater pumps, cooling tower pumps, ammonia pumps, refrigeration comps and coolers along with the electrolysis equipment MUST be run on EXTERNAL POWER! The emergency generation included in the air permit will ONLY be enough power to run JUST the refrigeration system of the storage tank - and HOPE power returns before the ammonia start to warm up in our 100°F ambient air temp - at 100°F, the vapor press of the ammonia is right at 200psig. Without flow and cooling, that exothermic reaction can very easily "run-away" leading to a catastrophic release, probably not a tank rupture, but, for sure a relief valve actuation and release. I HATED thermodynamics in college, so here's a math problem for you - how many cubic feet of liquid ammonia must vaporize to atmospheric pressure per minute to adequately cool the 16 MILLION Gallon storage tank!? The bookmark/flier put out by the TCEQ showing the risk/concentration levels of ammonia is also wrong. The two SDS sheets I downloaded do both show the STEL to be 50ppm or 50,000ppb BUT both data sheets state the IDLH (Immediately Dangerous to Life and Health) level to be 300ppm NOT the value of 1,700,000ppb or 1,700ppm shown on the bookmark - or 1/6 the TCEQ stated concentration to cause DEATH. Where did the TCEQ get their values - From Avena!??? Another LIE or SERIOUS Mistake - You TRUSTED Avena??? WOW! If TCEQ used the 1,700,000ppb or 1,700ppm as the IDLH value for its models, YOU BETTER RE-RUN YOUR MODELS with the correct IDLH value of 300ppm according to OSHA!!! It took me about 15 minutes to look up the SDS sheets and tech data sheet on the internet - Where did you get YOUR information - From Avena !??? They are obviously LYING to YOU as well as the public! Do Your OWN Homework!! I have worked in local heavy industry for over 45 years - I know these types of rotating equipment and what it takes to keep them running reliably - The leakage rates and equipment volumes are estimations, but will be pretty damn close.

COMMENTS: Has anyone from the TCEQ even LOOKED at a map showing the area that these IDIOTS are wanting to put a facility that manufactures, stores, handles and ships a material that is classified as a Hazardous Material with a severe "Immediately Dangerous to Life or Health" rating !!?? I am well aware of the incompetence and crooked nature of our local County Commissioner and County Engineer - They can't even get water to run downhill!!!BUT - Placing a high hazard plant in an area SURROUNDED by residential areas and immediately upwind from a city is beyond STUPID - its Criminally Negligent! Beyond the hazards, WATER is in short supply-currently under stage 2 restrictions & expect Stage 3 in July, Electrical infrastructure is already seriously strained, no Nat Gas supply pipelines in area and as recently proven with only 5" of rainfall - the area Floods! What Are You Thinking!! I previously submitted a comment on Feb 6th and got an acknowledgement, outlining person experience with Anhydrous Ammonia, so I'm not going to restate Those horrors. Just WHAT in all of this is GREEN!!?? Other than the human tissue that turns gangrenous after the chemical or cryogenic burns?!

COMMENTS: I have been a resident of the Valley View Subdivision for over 40 years. In this time the additional RESIDENTIAL development and ABSOLUTELY HORRENDOUS planning by Nueces County regarding infrastructure has led to the flooding of my home on TWO occasions in the last two years!! Previously, I had NEVER had a flooding problem. NOW - Some IDIOT wants to place a facility that manufactures a HAZARDOUS MATERIAL, that is manufactured, stored and transported under pressure, in the MIDDLE of several residential subdivisions - Mine Included!!! With the predominant Southerly wind - Several subdivisions, including mine, are directly downwind of this proposed facility. If the wind happens to be coming out of the North, there are several MORE subdivisions, and Robstown in THAT direction!! WHAT THE HELL ARE THEY THINKING!?!?! I work in a local refinery and am VERY AWARE that Anhydrous Ammonia is DEADLY, causing severe, 3rd degree chemical burns on contact with human tissue, cryogenic damage (Frostbite) if in liquid form, and IMMEDIATE damage to lung tissue when inhaled in its most dominant, gaseous form. The only thing "GREEN" about this plant is that the ammonia, in concentrated form has a green tint to it!!! Again - WHAT ARE THEY THINKING!?!?! Somebody better go ahead, right now, and set up a list of contacts for all the injury/damage/liability lawsuits that are coming for everyone who approves/owns/operates this fiasco!! NO - I DO NOT WANT A HAZARDOUS MATERIAL MANUFACTURING FACILITY IN MY FRONT YARD!!!

COMMENTS: To build and operate an ammonia plant so close to a residential area is not safe for the surrounding residents and community. Over 90% of the year the prevailing wind is from the South East direction. An elementary school is less than 2.5 miles North West of the proposed location along with densely populated neighborhoods. Approximately 3.5 miles North East of the proposed location is an intermediate elementary school with a high school next door. South West of the location are other schools and densely populated neighborhoods. As an employee of a local refinery, I truly believe this is wrong, unsafe, and a bad idea for the surrounding community. There are other locations within the greater Corpus Christi area that are better suited for this type of facility.

COMMENTS: I protest the building of this plant so close to homes and schools. So many families with children in a close proximity. My son and his family are even closer than I am to this proposed location. It gives me great concern that we are only hearing of this at the very last minute to protest. What hasn't there been some type of discussion with our area about this facility to educate us on what to expect.

COMMENTS: I oppose the ammonia plant in Robstown. I live within a few miles of the location. My main concern/question is why would TCEQ approve a facility that will use millions of gallons of water a month when we are in a water crisis? Beyond just the dangerous chemicals, which is pathetic that TCEQ would put so many people at risk is crazy but on top of that to further the depletion of water is criminal in my opinion. Please do the right thing for our families and deny the permit. There are numerous other options and locations for this facility. Thanks.

COMMENTS: Ammonia is toxic and building this plant near this area can be detrimental to our health. Making and keeping it stored for transfer through pipelines, even a small leak can cause so much harm in several ways. This plant should be built in an isolated area away from residential areas and farming. This is not the place to build it.

COMMENTS: I am requesting that a permit NOT be given to Avina Clean Hydrogen, Inc. / Nueces Green Energy. I was at their meeting tonight. There will be no solar panels and no windmills providing energy for this plant unlike what was shown in their presentation. They will get their power from local electric companies. They said you can smell ammonia at only 2 ppm and there are no safety concerns until you reach 300 ppm. They are self-regulated so what do you think that will mean for our air quality? The water supply contract lists a usage of 5.5 million gallons per day but that they can request up to the maximum available from Nueces County Water District 3. How can we sustain that? We are already under drought conditions. They also stated they are only the first to come set up shop and that many more plants are already in the works. They implied that Robstown desperately needs their money. It sounds like we are now an easy target. They chose this spot because it is an unincorporated area and all of our local officials are claiming they have no jurisdiction even though they are all on video celebrating at a cocktail mixer 3 months ago. This is all just a grab for the \$8 billion in grant money that the Dept of Energy is dangling because they want hydrogen. Ask yourself why before you grant this permit. Thank you for your consideration,

COMMENTS: I am against the proposed ammonia plant trying to be built on road 1889 right between Robstown and Calallen. I would like to know when a public meeting is going to be held and where I can find the environmental study that was done. We have a nature park that is within 2 miles of this plant and the migration of hawks fly right over this area. This plant cannot be safe for our air and under ground water.

COMMENTS: I recently learned of this proposed ammonia plant, it concerns me that the location is 5 or less miles from at least 5 local schools and thousands of residential homes. The location needs to be looked at due to environmental issues if/when this plant has any problems. There are plenty of sites further from residential areas that would have less of an environmental and health impact.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

FAX:

COMMENTS: The ammonia plant does not need to be built so close to residential areas. The toxic pollutants released in the air will be detrimental. The planned site is within a couple miles from schools, nursing homes, residential homes, and businesses. Furthermore, why are we jeopardizing our air quality for a product that will be shipped overseas and not even utilized in our community or even nation? This proposed ammonia plant poses too much risk to air pollution and other health concerns. People who suffer from breathing problems with normal pollution in the air will suffer even more greatly. Seasonally we have Saharan dust in the air which causes problems for some; I can't imagine what the toxic chemicals released from an ammonia plant would do to us all. I do NOT support the proposed plant.

COMMENTS: I oppose the ammonia plant for many reasons— contaminants to the environment, taking away good farmland, and the high water usage. This area is growing rapidly and putting a plant in the middle of residential areas just does not make sense. Property values will decline dramatically. In addition, we cannot keep taking away farmland for other use. A growing population must be fed but we are doing everything possible to discourage production of food and fiber. We do not need to get into the business of importing our food! America should be dependent on no one. However, my biggest concern is the proposed water usage. We already monitor lake levels daily. Where would this large amount of water come from for the plant? With the proposed usage, if the plant were online today, we would be out of

water right now in the Coastal Bend. It is not sustainable with our current weather patterns and frequent droughts. Do not allow this plant to go through!

COMMENTS: To Whom it may concern, My property is very close to the location of this proposed plant. I do NOT wish for this permit to proceed unless we have a more clear explanation about the potential dangers this plant will bring to our area. We are a farm area and the last thing we need is for anything to get into our soil system and destroy our farming industry. This permit should be cancelled until the company itself have community meetings with its people within 50 miles of wind in any direction. We all should be made aware. Leticia Jimenez

COMMENTS: I am a retired senior citizen who enjoys spending time outdoors. I feel I have earned the right to have clean air free of contamination from flares burning and particles being emitted from industrial processes. I live 2 miles from the proposed Avina plant and less than a mile from a daycare and 3 public schools, elementary, middle, and secondary. There are two nursing homes and several medical offices and facilities that serve patients with compromised lung function within a mile of my home. This is a residential area with several subdivisions of lovely homes. Families have the right to enjoy their properties they have worked so hard for without worrying about air quality, not to mention the potential risk of dangerous, life-threatening, chemical leaks. I attended the 7/29 meeting and was appalled by the lack of sensitivity demonstrated by Avina representatives as concerned citizens presented their cases supported by facts explaining why the LOCATION of the proposed plant is TOTALLY UNACCEPTABLE. It would be a travesty of justice to greatly reduce the environmental quality in this residential area and endanger the community at large. There are open lands available for purchase. Why can't Avina build in a non- residential remote area? PLEASE DENY AIR PERMIT 174951

COMMENTS: I live 3.2 miles from the proposed Ammonia plant location and my immediate family lives within 2 miles of the proposed site. There is a substantial residential in the very close proximity to the proposed location and also within 3 miles of two (2) large school districts as well as other health care facilities. This is a bad location for this plant and I am strongly opposed this permit being granted. The experience of ammonia leak plants is well known and unfortunately, there is no such experience in Texas with such a plant to even realize what the probable impacts are going to be. Our area is already saturated with nearby petroleum and other chemical plants that add pollutants to our ambient and the further addition of these pollutants by a ammonia plant close by is adding insult to injury. Please listen to all of our area residents that are opposed to this location and urge them to find a location that is not so congested to vulnerable populations.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.
