COMMENTS: In 2004, in India, it was discovered that an anti-inflammatory medicine given to cattle was killing the vultures that cleaned up the carcasses at the many leather tanneries there. Before the government banned the drug, the vulture population in those areas dropped by 95%. (<https://www.nytimes.com/2024/07/29/climate/vultures-india-poisoning.html>) As a consequence, human death rates rose dramatically due to the proliferation of disease spread on land and water from the rotting meat, and the increase in the numbers of wild dogs - and the rabies they carried - that took advantage of the now burgeoning supply of food. This is a dramatic example of the fragility of the balance of nature and the importance of wildlife to humans. We may like to think that we can survive without vultures, or butterflies, or wild grasses, but in reality the effort to do so is self-defeating. The location of this proposed ammonia plant lies within an important bird area in the United States. Last fall, over one million birds of prey were counted over nearby Hazel Bazemore County Park as they flew south for the winter. What happens if those raptors' numbers are diminished, as in India? The Cornell Lab of Ornithology published the results of a study of bird populations that shows a drop of 2.9 BILLION breeding adult birds across Canada and the United States since 1970. That is what humans have done, and an ammonia leak would put not just humans but the natural environment around us in peril. Among the ecological processes affected by loss of bird populations are: - seed dispersal - pollination - consumption of carrion - predation of invertebrates and fish - predation of vertebrates Not only would the natural environment be under threat of a disaster from a leak, but we the citizens of the area would also be living with the fear and foreboding of such an incident. Our area supports many refineries that present a similar threat of leaks and explosions. Please don't add to our lives another source of anxiety and worry about possible devastation. Our environment is already under assault. Find another location closer to the port that would minimize the potential for pipeline issues, and place the plant in an area that already has a strong emergency response system in place.

COMMENTS: Dear TCEQ, Thank you for the public meeting on July 29 in Robstown. I appreciated the professionalism of the panel participants, as well as the information disseminated. My family and I moved last year into Corpus Christi from a property outside city limits, east of Robstown. One of the reasons we moved was ongoing exposure to agricultural chemicals at our former property. On a rotating basis, farmers use ammonia to fertilize the fields prior to planting. I don't know about TCEQ standards for agricultural usage, but I can testify that the air was noxious for at least 24 hours following the application of the ammonia. I kept my children indoors and we avoiding going outside as much as possible. To my knowledge, there is no requirement for farmers to notify residents near the fields before spraying the ammonia. Often times it seemed that the farmers would apply the ammonia fertilizer on Sunday mornings, because we would be overwhelmed by the odor through the closed windows of our van as we drove to or from church. I wonder if the permit research has taken this existing agricultural ammonia into account when determining acceptable levels of emissions from the proposed plant. In addition, agricultural use of chemicals involves heavy and frequent use of defoliant multiple times per season. In the twenty years we lived in that location, defoliant was used before planting to sterilize the fields, then again before harvest. If the residual plant matter is left in the field too long after harvest (which can happen due to rain), then defoliant is used yet again. I am concerned about how the additional ammonia or other emissions of the proposed plant might combine with defoliant to further harm air quality. Cotton crops in particular often require repeated application of pesticide during the growing season. I am concerned about how these chemicals might possibly compound with ammonia or other emissions from a proposed ammonia plant. Thank you for considering my concerns.

COMMENTS: Robstown is an agricultural community that uses nitrogen fertilizers regularly. This non-point source pollution source regularly increases ammonia levels in the vicinity of the proposed plant location and surrounding community. There is a concern that agricultural ammonia background emissions would give a falsely inflated level in ambient air quality and additional point-source readings from the proposed plant would be based on an artificially high level to begin with.

COMMENTS: I live less than 3 miles from the proposed location of this ammonia plant and I do not want this plant anywhere near residential areas. As a parent, I have concerns regarding the possible release of anhydrous ammonia, the potential for a high volume of water use, the emissions from the plant, and flares. Certainly there has to be another rural location that is not in the middle of a populated area where this plant could be built. Also concerning: the first time I drove past the signs I couldn't read them because the type was small and thin. The next time I drove by the wind has knocked almost all of them down.

COMMENTS: At what point would a company think that building an Ammonia plant in a populated area with families and especially children be a good idea. This is very concerning not only as a parent but a health care professional as well. Anhydrous Ammonia is stored as a liquid under high pressure and if mishandled or released into the environment it becomes a toxic gas and can become a health hazard. Some of this effects can include lung irritation, severe respiratory injuries, and even death. I oppose the building of this plant for the safety of my family and my neighbors.

COMMENTS: TCEQ do you know you have 3 hazardous waste sites you are monitoring within 2-5 miles of the proposed site? With an additional FEDERAL site about 7 miles away? Have you made an on-site visit to the proposed AMONIA site? If not, please do and bring a copy of the map site provided by Avina with you ...It appears the map in the application has been photo -shopped, as numerous homes are not on the map provided with their site application. Is this LEGAL? Did you know the Nueces Water District is contemplating a lawsuit against Corpus Christi over their violation of Water rights? The Nueces Water District only receives 10+- mil gal/ day from the Nueces River and Avina is requesting 7 MILLION gal/day!!!!!! Corpus Christi installed an intake (?) BEFORE the Nueces Eater District intake and is now providing 84% of Corpus Christi's water to INDUSTRY!!! Please do not approve this permit! The people of Robstown and surrounding communities deserve better!

COMMENTS: The permit for the “Green” ammonia plant should be denied, as should all permit! The city of Corpus Christi posted the following message regarding the water needed to support this plant. There is NO WATER for this plant. The Proposed Ammonia Facility Would Draw Water from the Nueces River CORPUS CHRISTI, TX – On February 21, the City of Corpus Christi officially became aware of the proposed Nueces Green Ammonia facility north of Robstown, Texas, outside Corpus Christi city limits. According to Vishal Shah, Founder and CEO, the project, referred to as Nueces Green Ammonia, will be built, owned, and operated by Avina Clean Hydrogen. According to recent reports, Avina expects to purchase seven million gallons per day (MGD) from the Nueces County Water Control and Improvement District (WCID) #3. Nueces WCID #3 permit is currently limited to approximately nine MGD from the Nueces River, the same primary source for Corpus Christi Water (CCW). Despite being the regional water provider for a seven-county region, CCW was not consulted about this project or its possible uncoordinated impact on the region’s water supply. “While the City encourages economic growth, the Nueces River is a vital water source for Corpus Christi, and direct planning with all water agencies with water rights is paramount,” City Manager Peter Zanoni said. The City of Corpus Christi will work with our regional partners to better understand the impacts on our over 500,000 customers across the Coastal Bend. Until a new water supply can be brought online, we must carefully manage impacts on our existing sources to avoid shortages or interruptions in service. ROBSTOWN DESERVES BETTER THAN THIS POTENTIAL DISASTER. Deny ALL permits.

COMMENTS: 20+ years ago, our neighbors (Menn family) had a home located about a quarter of a mile from this proposed site. Unbeknownst to them, there was/is a gas pipeline that ran underneath their home! They had to move out and their home was demolished. I believe this gas pipeline is still there and it is less than .25 miles from this proposed ammonia (highly toxic) plant! Common sense says you DO NOT ALLOW a facility of this sort to be built this close to a gas pipeline. Please DENY this monstrosity of a permit? The citizens of Robstown deserve better than this.

COMMENTS: The permit application states the ammonia will be transported via a pipeline to the port. 1). What communities will the pipeline be going through? 2) is this an existing pipeline or a new pipeline? 3) if it is an existing pipeline, how old is it? What is the pipeline currently used for? What is the condition of the pipeline? This is the wrong location for this horrendous facility for many reasons. The permit Must be denied! The citizens of Robstown DESERVE BETTER than this for their community.

COMMENTS: I understand in the permit, the ammonia from this plant will be transported via a pipeline to the Port of Corpus Christ. And, the excessive amount of water needed to make this ammonia product will eventually come from Corpus Christi. The citizens of Robstown currently obtains their water from the Nueces river. South Texas has been in drought conditions for years and this will most likely continue. The port is approximately 20-25 miles from this site! There is NO vacant land for either of these pipelines (water or ammonia). The pipelines would require thousands of easements from homeowners, businesses, cemeteries, schools, churches, etc in order to build these pipelines. This

factory has NO BUSINESS being located on this site. They should look for a site closer to the port with the infrastructure already in place, or GO SOMEWHERE else, Robstown deserves better than this!

COMMENTS: Does Avina, the India owned company want to build these dangerous plants in Texas because of the BHOPAL protection laws passed in 1985 after the gas plant in BHOPAL, India exploded in Dec. 1984. The gas and debris cloud killed 20,000 people and injured 600,000, of which 15,000 died later of their injuries .The plant site today, forty years later is still leaking toxins and carcinogens out of the ground. Now we are facing the prospect of a "green ammonia" plant in our area. This is actually a HYDROGEN producing plant. They take water from our already depleted resources and extract HYDROGEN from it which is then stored in huge tanks in a very narrow temperature and pressure range and deviating from these parameters means one giant explosion which creates a cloud of gas and debris which,

like at BHOPAL, will evaporate everyone locally and then drift into Corpus itself killing thousands and injuring thousands more. They tell us all about how safe the plant is but BHOPAL was a "state of the art" plant with five safety systems, but unfortunately all these safety measures were turned off or inoperable on the night of the explosion. Robstown DOES NOT WANT or NEED this company no matter what "incentives" they are offering. REJECT this permit!!!

COMMENTS: Remember this ... I'm pretty sure this agency was very aware of the Waco ammonium explosion in 2013 As a reminder ... On April 17, 2013, an ammonium nitrate explosion occurred at the West Fertilizer Company storage and distribution facility in West, Texas. 15 ppl were killed. Over 200 ppl were injured. 350 homes were damaged. This is reason enough to deny this permit! This is the wrong location for this facility. Stamp it "DENIED" I can't imagine what an explosion like that would set off in Robstown with all of the oil and gas pipelines !

COMMENTS: Robstown deserves better than to be an experimental site for a company out of India! This "Green" facility makes NO SENSE in this location! Please deny the permit! And, start encouraging some land use laws! Texas is becoming a dumping ground for questionable businesses due to the lax land use rules. I am a proud 1972 graduate of Robstown HS. I was born and raised less than a half mile from the location of this proposed facility. My parents, grandparents, aunts, uncles and neighbors are buried in the adjacent cemetery. I have family members who live less than a mile from the proposed site. This is a community of long time homeowners, farmers, business owners, teachers, schools, and churches. Building a highly toxic "green" AMONIA plant makes NO SENSE in this location. There are multi-generations

living in close proximity and would be severely impacted, physically, economically, and environmentally with this monster of a facility. This is NOT the location for an ammonia plant that WILL harm and poison the land, air and aesthetics of this community for future generations, What about all the water needed to make AMONNIA? I believe the Robstown water source is the Nueces River! Where will the required water come from? The desalination plant? that also seems to be a hot topic! Where and how will the byproduct be disposed of? County Roads 1889 and 46(?) are 2 lane roads that will not be able to handle the truck traffic. Who is going to repair and maintain these roads? Please do NOT allow this company to contaminate Robstown! Robstown deserves better than this! Do you really think those "high paying" employees will live in Robstown? I highly doubt it... they will want to live on Ocean Drive, far away to protect their families.

COMMENTS: Please do not approve this application. The proposed location is between two highly populated residential areas that do not want an ammonia plant between them. Two flairs would ruin our night sky not to mention the worry of any release from the plant and the "expected" release amounts look incredibly large!!! I can't imagine this will do anything but crash my properties values. I didn't move to the Rand Morgan/West Guth Park area for a reason. Its to close to the large plants!! I work in a chemical plant but I don't live close to it for a reason. My work place takes every precaution and honestly goes overboard on attempting to control any and every environmental impact but things can still happen. That is the reason my company chose a site that is well away from any residential area. With all the open

land around this area Nueces Green Ammonia Plant needs to find a more suitable location away from any residential neighborhoods.

COMMENTS: This is the wrong area for industrial development. There is not enough fresh water to support new industrial level consumption. Also, the geographical inclinations in the area of the proposed plant would direct flow of unplanned releases of unprocessed waste water into Oso creek upstream of Corpus Christi or during heavy rain events into the Nueces river upstream of the intake to Corpus Christi's drinking water processing facility.

Please give this form to the person at the information table. Thank you.

My family of 4 lives 2 miles from the proposed ammonia plant. We do not want this plant in our community because of the potential effects to our health, foremost, but also due to the fact that this should drive our property values down. In addition, this plant jeopardizes our already limited water supply.

COMMENTS: I understand that this "green" ammonia plant is proposed to be built 2 miles from my Calallen (Northwest Corpus Christi) home and workplaces - Calallen ISD schools. I am very concerned that this plant will be emitting ammonia and carbon monoxide and has the potential for spills and noxious odors near our home. This plant should not be built so close to neighborhoods and schools.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land

Re: Request for Public Meeting on Proposed Air Quality Permit Number 174951

Dear TCEQ Chief Clerk and Commissioners,

I am writing to formally request a public meeting concerning the Proposed Air Quality Permit Number 174951. As a concerned member of the community, I believe that a public meeting would provide an invaluable opportunity for residents and stakeholders to gain a deeper understanding of the project, express their concerns, and engage in a constructive dialogue with the relevant authorities.

Project Details:

- Permit Number: 174951
- Name: Nueces Green Ammonia LLC
- Location: Southwest corner of Farm-to-Market Road 1889 and Farm-to-Market Road 46, north of Robstown, Nueces County, Texas 78380

Reasons for Requesting a Public Meeting:

1. ****Community Awareness:**** A public meeting will facilitate greater community awareness regarding the specifics of the proposed project, ensuring that residents are well-informed about potential impacts on air quality.
2. ****Stakeholder Input:**** Hosting a public meeting will allow affected residents, community organizations, and other stakeholders to voice their concerns, provide input, and seek clarification on the proposed project.
3. ****Transparency and Accountability:**** A public meeting is a critical component of a transparent regulatory process. It ensures that decision-making is accountable and that the concerns of the community are considered in the regulatory decision-making process.
4. ****Information Exchange:**** The public meeting will serve as a platform for the exchange of information between the regulatory authorities and the community, fostering a better understanding of the project's potential effects on air quality.

I kindly request that the TCEQ schedule a public meeting in a timely manner to ensure that all interested parties have an opportunity to participate. Additionally, I suggest that the meeting be held in a location accessible to the affected community and that it be widely publicized to encourage maximum participation.

Thank you for your attention to this matter. I appreciate the TCEQ's commitment to transparency and public engagement in environmental matters, and I look forward to the opportunity for constructive dialogue on the proposed air quality permit.

Sincerely,

Ryan Lawhon

Re: Request for Public Meeting on Proposed Air Quality Permit Number 174951

Dear TCEQ Chief Clerk and Commissioners,

I am writing to formally request a public meeting concerning the Proposed Air Quality Permit Number 174951. As a concerned member of the community, I believe that a public meeting would provide an invaluable opportunity for residents and stakeholders to gain a deeper understanding of the project, express their concerns, and engage in a constructive dialogue with the relevant authorities.

Project Details:

- Permit Number: 174951
- Name: Nueces Green Ammonia LLC
- Location: Southwest corner of Farm-to-Market Road 1889 and Farm-to-Market Road 46, north of Robstown, Nueces County, Texas 78380

Reasons for Requesting a Public Meeting:

1. **Community Awareness:** A public meeting will facilitate greater community awareness regarding the specifics of the proposed project, ensuring that residents are well-informed about potential impacts on air quality.
2. **Stakeholder Input:** Hosting a public meeting will allow affected residents, community organizations, and other stakeholders to voice their concerns, provide input, and seek clarification on the proposed project.
3. **Transparency and Accountability:** A public meeting is a critical component of a transparent regulatory process. It ensures that decision-making is accountable and that the concerns of the community are considered in the regulatory decision-making process.
4. **Information Exchange:** The public meeting will serve as a platform for the exchange of information between the regulatory authorities and the community, fostering a better understanding of the project's potential effects on air quality.

I kindly request that the TCEQ schedule a public meeting in a timely manner to ensure that all interested parties have an opportunity to participate. Additionally, I suggest that the meeting be held in a location accessible to the affected community and that it be widely publicized to encourage maximum participation.

Thank you for your attention to this matter. I appreciate the TCEQ's commitment to transparency and public engagement in environmental matters, and I look forward to the opportunity for constructive dialogue on the proposed air quality permit.

Sincerely,

Ryan Lawhon

Ryan Lawhon

COMMENTS: I strongly oppose the Nueces Green Ammonia permit for a number of critical reasons. The Nueces River is a critical water supply for almost the city of Corpus Christi, this will put citizens in danger as South Texas is already prone to drought. The product that will be manufactured is for export, not even used in the country, nor benefit the citizens whose lives they are gravely affecting. It will release a large number of hazardous air pollutants including carbon monoxide, sulfur dioxide, anhydrous ammonia, etc.. known carcinogens. Please for the sake of the public good reject this permit.

COMMENTS: As a resident within the protective distance of an incident I protest the construction of this facility. The main road FM 1889 is extremely travelled and is a main roadway between Robstown and NW Corpus Christi. Adding such a volatile plant in that road potentially harms thousands as well as limits evacuation routes for those right within the proposed plant location. Numerous families, school bus routes, and commuters use that road. Transportation of the end product would most likely be taken right through either Robstown, or Calallen further extending the hazard within set communities. Building of such plant will bring down home values in an already struggling area due to families not wanting to be near such a hazard.

COMMENTS: This proposed facility causes great concern for me. I am not understanding how any facility with this type of life threatening chemicals can be approved next to so many residences. The risk versus potential damages is too high. If your agency is in place to protect environment and people, it cannot be approved. Any company wants to profit, but if they are truly concerned with neighbors, they would not install right across the street from established homes. No amount of mitigation is 100 percent fool proof, therefore there must be a buffer zone to protect citizens. Once again, if they are not willing and able to afford a buffer zone, they can't be trusted to build in the appropriate mitigations. On top of that, protecting citizens means protection of their property as well Property values will plummet in this neighborhood. Many are retired and can't afford to relocate. I am a retired safety professional from a top notch chemical plant. This plant made sure to buy up property way way east around the plant, even in the 1980s. I know a lot about risk, mitigation and being a good neighbor. There's no way a good neighbor would put chemicals next to their neighbors. Thanks for your time

COMMENTS: I am opposed the Nueces Green ammonia plant. I am asking you to deny permit. This plant and the pollution it brings will have a detrimental effect to those in our community, my family and myself. The majority of Robstown citizens are comprised of Hispanics with many Spanish speaking. The TCEQ permit is not available at the Keach family library is not available for them to review and the cost of \$62 dollars to print the 240 plus permit is an economic obstacle to our community. These permits should be available in both languages... I have been personally requested to speak to a group of Spanish speaking citizens. This is unacceptable to us!!! Everyone in our community should have the ability to go into view without obstacles! I am requesting you extend the commencing period to give us time to address those who did not have the ability to comfortably view the permit in Spanish. I also am requesting that the modeling of the process and pollution being emitted to reflect the 3.2 billion gallons they will be PERMITTED to produce. And as stated in your mission to protect public health, I am requesting you to model disaster scenarios in the amount of the 16 million gallon tank and possible leaks in various amount up to 16 million gallons, to include dangers/effect in those quantities to the environment including air, land, and public health. These disaster scenarios are pollution of/when this tank fails.

COMMENTS: I am opposed to the ammonia plant. The release of ammonia, carbon monoxide, hazardous air pollutants, nitrogen oxides, particulate matter, and sulfur dioxide is detrimental to the citizens of our communities. The air pollution will be close to established neighborhoods, nueces co park, stadiums, schools, daycares, retirement homes, and shopping centers. This pollution will affect my family members whose illnesses reacts to changes in season and their homes sit within 3 miles from this plant so I'm sure it will affect their chronic illnesses. While you may think that the 3000ft is far enough away from our communities. Will the pollutants be contained within those 3000ft? Can you or this company guarantee there will be no releases whether thru process/human error/equipment failure? and will those accidental releases be contained within 3000ft? The permit also states that this plant sits in a rural area. It does not. Measuring from the property line (not the middle of the proposed property like you do) to the Robstown city limit is 125ft. There are populated neighborhoods along 1889, wood river, and Robstown, All from next door to 2miles of this plant. Neighborhoods with families. The utter disregard for the distance of this plant and its 16 million gallon refrigerated storage tank and the communities it sits in between is unacceptable. If the Ammonia tank contents is accidentally released into the air, how far would it affect? how much ammonia would have to be released to affect those who live next door/across the street? Are you aware of the safety issues to the community? We are a group of Concerned Citizens of Robstown and Calallen who are opposed to this plant and the pollution and safety hazard it brings to our communities!

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: As a lifetime resident here in the Calallen community & with all of my family still living in this area (6 family house)& as a productive tax paying member of this community I strongly object to granting a permit for the production or handling of nitrates (fertilizer) which are dangerous & easily ignited especially in high heat areas which we have here.. furthermore there are too many people living close to the proposed area & this facility should be moved out to a more rural & less populated area where a mistake or mishandling of product will result in a much less loss of life... it's happened before many times & in many places & whoever even came up with this idea needs to be reminded of this.. no amount of money is worth the catastrophic consequences this petitioner is requesting..

I would like to make a public comment **against** Nueces Green Ammonia LLC.

If this ammonia plant is built, it will effect many more than those in the surrounding community. It will also affect EVERYONE who relies on water from the Nueces River and lake, EVERYONE who farms their land within miles, EVERYONE who counts on the produce from these farms, EVERYONE who has livestock on their property, EVERYONE who feeds their families from said livestock, EVERYONE who utilizes the nearby nature preservations, EVERYONE who has invested money in real estate, homes and businesses, EVERYONE who has any connection to the drainage ditches where they will be dumping their waste water and EVERYONE who utilizes the Texas power grid. There is a much bigger picture at risk than just those who live nearby. There is a domino effect that will be set in motion if this ammonia plant is granted the permit to build.

Deny the permit to Nueces Green Ammonia LLC.

COMMENTS: Good evening, everyone, Thank you for giving me the opportunity to speak tonight. My name is Lauren McNabb, and I live in the Country Estates neighborhood, less than 5 miles from the proposed site for the ammonia plant. I am here to express my concerns and to advocate for our community's safety and well-being. Firstly, I want to acknowledge the potential economic benefits that such a facility could bring, including job creation and local investment. However, the health and safety risks associated with ammonia production cannot be overlooked. Ammonia is a highly toxic and volatile substance, and accidental releases can have devastating consequences for both people and the environment. We must consider the proximity of the proposed plant to our homes, schools, farms and local businesses. The risks of exposure to ammonia can include respiratory issues, skin and eye irritation, and even more severe health problems in the event of a major leak or spill. Moreover, the environmental impact of ammonia production is significant. The process involves the use of large amounts of energy and water, and it results in greenhouse gas emissions and other pollutants. Our community has already been on water restrictions and the Texas power grid is already at risk. Allowing this plant to be built here would add additional strain on these crucial resources, and would be a step backward in our efforts to maintain a healthy environment for future generations. Additionally, there are concerns about property values and the long-term desirability of our neighborhood. The presence of an industrial facility can deter potential homebuyers and investors, leading to a decline in property values and negatively impacting our local economy. I urge the decision-makers to consider alternative locations for this plant that are farther away from residential areas. We must prioritize the health and safety of our community and ensure that any industrial development is conducted in a responsible and sustainable manner. In conclusion, while we understand the economic benefits of the proposed ammonia plant, we must weigh these against the potential risks to our health, environment, and property values. Let's work together to find a solution that supports economic growth without compromising the well-being of our community. Thank you for your time and consideration.

COMMENTS: I oppose this TCEQ permit being issued due to the proximity of the plant to numerous neighborhoods, schools, churches, etc. It would be an extreme health and safety hazard to build a plant like this in such a heavily populated area. Our area is also in an extreme water shortage as it is, and cannot support the demands of Avina.

COMMENTS: The Nueces Green Ammonia Plant is of great concern to me and my family. Our home is located directly across the street from where the plant would be built. First of all, the location of the plant is in the middle of a residential area. Second, there are schools that are located just a few miles north and south of the plant location. If there were any kind of leak or explosion or any other kind of accident, many lives, including children, would be in danger. There are serious health and safety concerns for those of us that live in the area immediately surrounding the plant location. Not only that, but the projected plant will have negative effects on the real estate in the surrounding area. It has already had a negative effect on us personally. We have been trying to sell our house since the beginning of January 2024 due to a job transfer out of town. We have not been able to sell because all potential buyers change their mind once they find out about the ammonia plant. An ammonia plant does not belong in the middle of a residential area that brings along with it many health and safety concerns for all of us in the immediate area.

COMMENTS: Would like to express my wife and my objection to the granting of a permit to this company due to its proximity to our property just North of the property address shown in request. Predominately the winds are out of South/East. Are home is approximately 1-2 miles from the proposed site. I am aware of the process and am not so much worried about the tons per year estimates, but the potential of a major release of contaminates that could affect the health of my wife, myself and my neighborhood.

COMMENTS: The community adjacent to your proposed site is much larger than you claimed. There aren't just 10,000 residents, the number is easily four times that including Calallen and Annville. Your planned site location is too close to homes, schools, human life. We are choked by too much environmental pollution as it is, from the heavy industry, refineries, already existing chemical plants - we don't need another health hazard in our community! Our children live here, drink the water, and breathe the air. We don't need any more poison. As evidenced by the vast acreage of wind turbines in the region, we experience a lot of very powerful wind every day (not just in hurricane season). If there were an ammonia leak from your plant the wind would carry it down to Corpus Christi and has the potential to kill thousands

of people, not to mention our pets, livestock, and crops. Your company needs to reexamine your market research and consider how you came to decide upon this area through the lens of ethical responsibility. Did you pick this region based on demographics? The residents of this community are watching. Some marginalized groups have been deeply affected by environmental racism in this area, and we must stand up against foreign corporations taking advantage, lying about economic opportunities, polluting our environment, and harming our health and our future.

COMMENTS: I do not believe an ammonia plant would benefit our community I have lived in the area since I was a baby. We don't need these companies from so far to come and build a plant in our community that would be effecting us not them. Maybe this will give jobs but it would be hurting everyone's health. Who's will be responsible for us, our community. Money will never be more important than our lives !! We need to protect our community and not allow this plant to be built for our future

COMMENTS: I OPPOSE the proposed Avina AMMONIA PLANT on FM 1889 and ANY TAX ABATEMENTS for it due to its proximity to TWO communities, certain health and environmental risks, a complete lack of project transparency from its beginning, resulting decline in our property values, and its UNACCEPTABLE daily water demand (experts estimate over 9 MILLION GALLONS PER DAY from our dwindling water supply!). All of which add up to an INSUPPORTABLE COST TO US just to produce fuel which will all be shipped to foreign markets.

COMMENTS: I will list my concerns: 1. We have been asking for development out in this area in terms of retail and homes and having a plant in our midst will discourage future community development. Could even lower our property value. 2. We don't need a plant in this area where we have farms and ranches. 3. Air/Water quality could be compromised as well as land in the event of a catastrophe. 4. Concerns for quality of life especially for those with health considerations.

COMMENTS: I absolutely do not agree with placing a hazardous chemical plant in the middle of my residential neighborhood where the elderly walk and children play everyday. This action has the potential for toxic environmental mayhem within our neighborhood. Nueces county water district #3 above ground exposed waterway where we receive our daily drinking water, will be less than 100 ft away from this chemical plant. This will also effect our property value exponentially. How will this plant also effect our physical and metal health on a daily basis in the future for our entire neighborhood? Respectfully, Arnold Morin, A concerned tax paying citizen

COMMENTS: I am opposed to this plant. It should not be built in this area. TCEQ has not completed the cumulative study on air pollution in the area, and it would be irresponsible to approve this permit until the current scale of pollution is presented, and the health impacts are extensively reviewed. TCEQ should be looking out for the well-being of the residents in the area.

I oppose permit #1749 1

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land

COMMENTS: No one should sign in approval of the ammonia plant because it is dangerous for the surrounding community. Whenever you do something that takes away from LIFE, you lose a part of yourself. Not because you have done something bad, but because you sell a part of your soul to the 6000 yr old death cult that is selling us all out. Its not too late. You have to start doing whats right. Fight back.

FAX:

COMMENTS: This is too dangerous for our region. There are farmers that farm these lands and their crops can be in danger if this plant is built. An ammonia plant this close to neighborhoods is harmful to anyone with respiratory issues. This is a horrible idea to have this plant built here in this community.

COMMENTS: I am against the ammonia plant! The potential dangers of having it near homes, schools, and businesses are alarming. I understand that some people profit from this industry, but is it worth risking the safety of our community? We've built a strong, thriving community, and having this plant nearby could one day harm our town and its residents. There is simply too much at risk, and we shouldn't take that chance. We need to prioritize people's safety and make smarter, better decisions for our community.

COMMENTS: Corpus Christi is a beautiful city, with wonderful residents, beautiful wildlife, and a generally beautiful landscape. It is a shame to see city officials wanting to ruin that. Who knows what toxins will fill the air with this new green ammonia. Residents will get sick, you will ruin the wild life and make corpus an inhabitable space. It is bad enough that pot holes are rampant around town, people are without homes, jobs, shops are losing business, if this continues any further it will have a drastic impact to your ecology and economy.

COMMENTS: Nueces Green Ammonia's air permit states that Nueces Green Ammonia or AVINA proposes an ammonia production rate of 3.2 billion gallons per year. In order to produce this amount of ammonia, the applicant will deplete an enormous amount of our region's water. Our local water sources are already monopolized and depleted by industrial customers' and their demands. The TCEQ must stop allowing water-intensive industries to the Coastal Bend Region.

FAX:

COMMENTS: I am requesting TCEQ to DENY Air Quality Permit #174951. Anhydrous ammonia, carbon monoxide, nitrogen oxides, and other hazardous pollutants will be emitted from this proposed "green" facility, right next to residents, schools, grocery stores, and other necessities for community members. Coastal Bend residents do not want or need this. We, as Coastal Bend residents, also are unaware of how many tons of these emissions will be released into our air. Regardless, these pollutants are hazardous and detrimental to the health of residents. It is UNFAIR that Avina capitalizes off our land, air, and water only to pollute the air we breathe. Accepting this permit will be one step closer for Avina to operate, where they will be using anywhere from 5.5 MILLION to 9 MILLION gallons of water per day - water that should be saved for people and not polluters. DENY THE PERMIT. Keep the Coastal Bend environment safe, like TCEQ is supposed to do.

COMMENTS: I am requesting this permit be denied by TCEQ, on the grounds that this community as well as others in Nueces county are overburdened by the industrial expansion, in particular BIPOC communities who suffer disproportionately from breathing and lung disorders. I am also requesting this permit not be granted based on the inability or refusal for TCEQ to conduct a study monitoring the cumulative impact of various industries on communities. Our communities are overburdened with the influx of these "green energies" and this commission is not doing enough to protect our communities or the animals, land, air, and waters for future generations.

COMMENTS: Please do not build this plant in this location. It is too close to where lots of families that have lived nearby for years are, including mine. I am not opposing the building of this plant, just the location. I understand that the plant will have green initiatives, but it will be the first of its' kind. How do we know for sure it will work, this will be a trial? If it's a trial, then build it somewhere away from towns and residents. What if something happens, then what? Please do not build it here.

COMMENTS: Hello, my name is Stefanie Perez. I have lived in Nueces County a majority of my life living in Calallen and now in Robstown, TX. I ardently oppose this issuance of this permit for the ammonia plant to be built. I live in a neighborhood down the road from this area. I do not want to have to look out from my front porch at flares in the sky or a plant down the road. We have roots here, we have our children here. I have already told them that this might happen, and they are terrified now of this. They love their home, and the potential for this to might happen is devastating to them. They don't want to look at flares at night, they want the beautiful night sky. Build this plant away from

neighborhoods, out in lands where nothing is close by. There are homes directly adjacent and across from this proposed site. Please, please do not do this. We as citizens do not want this. Thank you for your time.

COMMENTS: Please deny this permit for Avina! I am concerned with the air quality of escaping plumes that travel via our gusty and unpredictable winds and weather. Our schools and other vulnerable groups that have asthma, COPD, bronchial issues will suffer from extra pollutants. We have enough air problems w/ fire burns; smoky hazy conditions; foreign and home dust blowing in; agricultural pesticides/sprays; etc. this harming our crops/ our general health / our animals/ our water supply. These are real everyday worries! Safety of life should be a priority..pls say no..this is the wrong location

COMMENTS: In 1997, my husband and I intentionally chose to buy a home in a residential community NOT an industrial complex. The proposed Avina ammonia plant brings industry within 2 miles of our home. My concerns are numerous and include: Excessive use of water by industry which probably means less for residential users. Increased and more dangerous heavy equipment traffic on already congested roads. Industrial flaring which is potentially loud and possibly noxious. Potentially dangerous pipeline transport. Industrial complexes should not be zoned in areas with close proximity to schools like Robstown High School, Wood River Elementary, and Little Roos day care.

COMMENTS: A green ammonia processing plant should not be permitted in this area. The potential change in air quality within such close proximity to residential property is of valid concern. Ammonia is a hazardous chemical with the potential for respiratory issues among other health concerns. The plant will have an environmental impact even in optimal conditions, much less a failure. Undesired odor from the plant, noise pollution, light pollution created from facility lighting and flares, and an increase in traffic are conditions that will exist. In addition to the negative impact this plant will create within the community, it will affect property values in an undesired manner.

COMMENTS: It has been stated that the emissions from the proposed Avina Ammonia Plant will be under the levels permitted by the state of Texas. The cumulative emissions in the area need to be considered in the evaluation of this permit. In addition to other industrial facilities in the area which already emit odor, emissions and noise, we have many days of pollution from agriculture burns in Mexico and Saharan dust. In fact, today we have been warned by the local news to stay indoors due to the amount of Saharan dust. I have a family member who has been ill off and on for months due to this pollution. You can only take so many steroid shots to try to relieve your symptoms, as they are not good for your overall health. This is where my family member is now in trying to improve their health. I have no faith in the data provided by Avina in their permit request. In attending meetings regarding this company, they have been found to be less than forthcoming with information and their employees, who claim to want to be a part of our community, are rude and disrespectful to our community members at meetings. One employee laughs, giggles, and smirks at community members as they speak about their concerns for their family, and then makes eye contact with someone in the back of the room and smirks as the speaker leaves the microphone. I bring this up because I feel this reflects poorly on the company and how they feel about our community. Can a company that doesn't want to answer questions, and treats the community this way be trusted? I urge TCEQ to confirm all information received from Avina to be certain the data, etc. is accurate.

COMMENTS: The proposed Avina plant is a threat to the health of the Robstown and Calallen communities. There are homes as close as 500 ft. from the proposed location. Schools and nursing facilities are also in close proximity. Emissions would put our children and elderly (our most vulnerable populations) at risk of health issues and even death when, not if, a disastrous event occurs. Emissions would certainly be detrimental to those with asthma and other health issues. Those undergoing cancer treatment fear their compromised immune system would be affected. Our community should not be expected to accept these hazardous emissions near our homes where we have invested our hard earned money and have chosen to raise our families. Retirees who spent their savings to purchase homes in this area are in fear of the air they will be breathing in their final years and how it will effect their health. Our community welcomes economic growth, but not at the expense of the health and lifestyle of our community members. This facility should be located elsewhere. I request that you deny this permit for the sake of the health and lives of our community. It is the job of the TCEQ to protect us, please do so by denying this permit.

COMMENTS: Avina has no experience with the type of plant they are proposing to put right in the middle of our community. Our community is going to be a testing ground for new technology with a company who has never done this before. This is a recipe for disaster. The permit requested indicates there will be "other hazardous air pollutants" with no explanation or detail. I don't know if this means they don't know what they are, or do not want to say. Considering that this is a new technology, any comparisons for emissions, etc. need to be carefully evaluated as to accuracy. Models for conditions other than normal operations need to be developed. The "kill zone" in the event of a disaster must be considered. An Avina representative said there could not be any spills/leaks when the product is being transferred from the storage tank to the pipeline. They can't guarantee that! There are so many things that could go wrong from mechanical failures to human error and maintenance issues due to hot, humid, salty air. The amount of product being stored in the storage tank is of great concern. I fear there will be many lives lost when a disaster occurs. The schools, nursing homes, residents, etc. will not be able to be evacuated in time to prevent the loss of many lives. There should not be such a facility in the middle of a community. In addition to the concerns for the health and safety of the community, the crops and livestock in this area are also at risk. Will it effect their growth? Will it effect the ability to sell these products? This may effect the livelihood of these families. Self monitoring is of great concern. The double talk and evasion of questions by this company does not create a feeling of trust. Hazel Bazemore Park (a local park) is well known for the many species of birds that can be found in the park. Visitors come from all over the world come to bird watch. This sanctuary could be negatively effected and migration patterns could change. The Nueces River, a local water supply and fishing area, is also close to this proposed location. Our community is not opposed to economic development. We are opposed to the location. It is the responsibility of the TCEQ to protect the people. Please do your duty to our community and deny this permit. Our health, livelihood, and even our lives depend on your decision. I feel sure that if this plant was about to be built close to your home, you would deny this permit.

COMMENTS: The map for of the proposed site for the Nueces Green Ammonia Plant submitted to TCEQ in the permit application appears to have homes that are nearby the proposed site removed from the map. I have seen a map with yellow stars marking where the homes have been removed. It appears that ten homes have been removed. Please be aware that there are homes VERY close to this proposed site. This site is NOT in an industrial area. It is in an area where many people live. The health and safety of the citizens in this community must be considered! The proposed site is not a good location for this plant! There are plenty of other sites that could be considered that are not in a neighborhood. It's unimaginable that an industrial facility would be located in this neighborhood.

COMMENTS: I am writing to you today in opposition to the requested air permit 174951 for the Nueces Green Ammonia Plant that is being proposed to be located on farmland in Nueces County just north of the City of Robstown, Texas. I am in favor of new industrial being located in our area because it generally is good for the growth of our local economy, but my opposition to this proposed industrial facility stems primarily on its proposed location and other related conditions noted as follows: 1. The facility is being located on farmland near: • residential neighborhoods where families live and their children play outside, including some that are within 500 feet, • farmland where crops are grown and livestock are raised, • K-12 schools that our children attend, • nursing homes where our fragile and elderly family members reside, • the Nueces River that is the source of our water supply, and • water treatment facilities for the local residents 2. The proposed facility is not in an industrial zoned area where it should be located, and therefore does not have the qualified and experienced emergency response teams that are needed to respond to the area in an emergency situation including fire, explosions and the release of anhydrous ammonia and other non-specified hazardous air pollutants (HAPs). 3. From the Public Hearing that occurred on Monday, July 29, 2024, we understand that the modelling that the TCEQ has performed for assessing this air permit request was only under standard operating conditions with a 12 mph wind speed, and utilizing data provided by Avina (Nueces Green Ammonia). With wind speeds that can vary up to 35 to 40 mph or more on a typical day in our area, we feel that the TCEQ needs to consider the impacts that would occur with higher wind speeds, utilizing industry data (not provided by Avina) that could be experienced when there is an actual release from this facility into this neighborhood area, and then measure the real dispersion effects. Also the non-specified HAPs need to be defined so an adequate impact can be determined. 4. The TCEQ also needs to evaluate the combined effects of not only this proposed facility, but the combined effects of all industrial facilities in the area to determine real residential impacts to the area. 5. The company proposing this facility is just a developer as they have indicated, and they have no experience constructing or operating one of these types of new technology hazardous material facilities. 6. Their lack of experience with these types of facilities, how to operate them, and their associated hazards probably explains why they would even consider locating such a facility so close to where people live – they either are just ignorant of the hazards, or maybe they do understand, but don't care about the safety of other people because it is all about making money. 7. During the Public Hearing, a Nueces Green Ammonia representative laughed & smirked at community member comments -that doesn't bode well for someone whose company is trying to please and work with the community. This may be demonstrating a lot about the company and their philosophies. 8. Nueces Green Ammonia has not demonstrated and probably has not yet developed an emergency action plan (EAP). This EAP should be developed and evaluated by Emergency Responders for its thoroughness. 9. Nueces Green Ammonia has not revealed their best available control technologies (BACTs) that they plan to use to reduce release incidences and provide advanced notifications to the area residences when a release and/or when an emergency does occur. 10. The TCEQ should not allow a company like Nueces Green Ammonia to self-monitor for the release of pollutants, when they have already admitted that they have never constructed nor operated such a facility. They don't have the experience to be allowed to do this. This is a cutting edge-technology facility that they really are not qualified to operate, and in an area occupied by people. If this self-monitoring is allowed, and when a catastrophic incident occurs, the TCEQ will be held responsible for the impacts just as well as that of the facility. 11. Now while the following is not air quality issue, it still serves as a significant impact to the residents of the Coastal Bend. We understand that this process will use large amounts of water (5 to 9 million gallons per day), which raises the following concerns: • At the current time, residents of the coastal bend are in stage 3 drought restrictions, which limits the amount of water that can be consumed or utilized for other related uses such as irrigation. • Our area water supply is stored in the Choke Canyon/Lake Corpus

Christi Reservoir System (CCLCCRS), and due to the drought, available water is at an all time low. • Allowing a facility such as this that requires this much water for its processes, and in combination with our current drought conditions, is not a good business decision where the risk is very high for running out of water for the residents, who have the first right to the water, not the industrial facility. • The facility should be located in an industrial zoned area away from residential areas, and near where seawater desalination facilities will be constructed that can provide the volume of water they need for their processes, and not impact the water supplies in the CCLCCRS.

COMMENTS: I live near an elementary school and having to worry about the kids, parents and faculty health along with my elderly parents health is beyond anything I can imagine. I will have to also worry about my own health and how it will affect me and how I am able to earn an income to help support myself along with my elderly parents. I know that I have neighbors who are also elderly so having this plant build and start to produce will cause not only health problems but so much more. It will cause the water we consume and the plants what will be growing to cause more health problems and even death.

COMMENTS: I am strongly opposed to the ammonia plant. The hazardous air pollutants along with the toxic ammonia will have a detrimental affect on my son. He suffers from a chronic skin condition. He already struggles to be able to play outside and this plant which will sit approx 1.5 miles from my house and 1 mile from the co park where he plays tball will be harmful to him. My family and I should not have to live wondering how he will react to the air pollution this plant will bring.

COMMENTS: As a nearby resident of the proposed location. A taxpayer of Nueces County, I am asking you to please DENY their request. So many people in this area suffer health issues including myself. There are so many other farm lands away from the immediate area this company should consider. There's already a chemical plant nearby and the two do not mix. Please seriously give this matter some thought. Many people in the community have died of cancer. We do not need another contributor. I thank you in advance for listening to our concerns.

COMMENTS: I oppose the establishment of this plant in the designated area. It is surrounded by neighborhoods and schools. No studies have been made about the dangers of an ammonia plant so close to communities. Also, the only people who will benefit from this are the polluters and the corrupt elected officials that keep on selling our city. Be mindful of the impact that this plant will have in the area. Do your work and deny the green ammonia plant in Robstown. NO TO AMMONIA !!!

2024 MAR 18 AM 10:15
SCHED CLERKS OFFICE

To the office of 3/13/24
TECQ Chief Clerk,

Dear Sir,

My name is Kathy Rokohl
And I'm writing to express
my concern about
this Arina Ammonia Plant.
They want to put it
between Robstown and
Calallen Texas. What
does it take to get this
permit for a dangerous
plant. To put it in
our neighborhood near
schools, farms, daycares,
nursing homes.

No one in this area
knew about it and no one
wants this.

The permit is
174951.

This is a foreign company
making the product they
will transfer to our
port thru our schools,
and neighborhood.

No one here wants this here. We will not get any use of this. They will ship it to Europe at our expense of using our water which is already in short supply. We are in Stage 2 water restrictions.

How can you permit is company making this dangerous product in our neighbor. Do you remember the accident is West, Texas.

Please stop this permit or come down here and explain to us the permit process.

Kathy Rokohl
3838 Leonard
Corpus Christi, Tx 78410
361-442-4484

Kathy.rokohl@yahoo.com

Please reply.

COMMENTS: Today I come to you as a 28 year old women with 3 children under the age of 8 years old to ask you to move this plant else where. My 6 year old son has asthma and as signs are depicting it could be a health hazard to my child. I ask that you think about the children! Most have children or neices and nephews and I ask that you think about them as well! What if they lived in this town. Would you consider building this plant in the vicinity of them?

COMMENTS: I oppose the building of the Ammonia plant being built on FM1889. I live less than 3 miles from the site and my daughter has medical issues including severe asthma. We moved out of city limits into the country to get away from the plants within the city of Corpus Christi. This possible facility is a potential health hazard for the surrounding community, schools, and businesses. Our community is made up of a lot of older people who want to enjoy a peaceful retirement. We cannot afford to move and start over. This possible plant is encroaching on our peace of mind and our safety. Please do not build here. Show INTEGRITY and build away from the community.

COMMENTS: The proposed ammonia plant was turned down several years ago. Nothing has changed. It would be devastating to the environment, the animals and the people in our area. The city is trying to sneak it in. They are only concerned with making money. They do not have any interest in protecting us or the area that would be affected. We already have the flare blasting for days on end from the refinery on McKenzie Road and the horrible smell from the meat packing plant on Leopard Street. They are also pushing through the desalination plant that the citizens of Corpus voted down. The people in office here are greedy, selfish and unscrupulous. No, I did not vote for them.

I do not want the ~~const~~ construction of this
Ammonia plant

Please give this form to the person at the information table. Thank you.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

Additional Comments: _____

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage 2 drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

COMMENTS: I have been living in the neighborhood since 1981 and it has been growing throughout the years with more houses, retails, restaurants and schools. Having a plant placed practically in the middle of the neighborhood will honestly break the economy. Our property will lose their value. We would not be able to sell if we want to move out of the area because no one would want to move to an area with a plant down the street. Those type of plants need to be placed outside city limits where there isn't neighborhoods and schools nearby!

COMMENTS: I live approximately 1 mile from this ammonia plant's proposed location and I am strongly against it. There is nothing but farm land between that site and my home. It is unethical to place an industrial plant storing 16 million gallons of anhydrous ammonia so close to existing residential neighborhoods. The impacts of an anhydrous ammonia leak can easily be detrimental to the health of those down wind as well as harmful to the environment. There needs to be limitations on how close industrial plants can be built to neighboring homes. I'm now fearful for the health and wellbeing of my young children who play outside daily. An incident where ammonia gets released isn't about if, but when. We all know they will have daily emissions covered by the air permit, but that piece of paper doesn't prevent the bad day. No matter how good of intentions this plant has to do the right thing and follow regulations, the bad day will come. Please do not force me or my family to have know what happens when that bad day occurs. I'm also opposed to how much water the plant will consume. When severe drought occurs, the water district will restrict usage of residences but never industry. The plant does not belong here.

COMMENTS: This is to correct the initial comment I submitted. I strongly oppose the location of this plant I am exactly 1.3 miles upwind of the proposed location. Any pollution emitted directly affects my young children. . I would like to know how much anhydrous ammonia will be stored on site. What kind of PSM/RMP regulations will This plant adhere to? How much water will the plant be utilizing each month/year? I'm concerned with the negative effect the increase in water usage will have on our community. We already have issues with availability of water and the water pressure in our area. How will they protect the public water supply from contamination? I do not want any of the proposed emission brought by this plant, as they are requesting to emit from their permit application. I request a public meeting.

COMMENTS: I vehemently oppose the construction in an obvious residential/agricultural area. As for environmental concerns, (1)What process will be utilized? (2) How or will they capture the Co2 that will be generated as a waste product? This is a serious environmental concern in greenhouse pollution. (3) What is the plan to contain Nitrate pollution of groundwater that is common in the manufacture of this material? (4) What is the process to capture nitrous oxide that is released?

COMMENTS: I am opposed to this ammonia plant project. I live in The immediate area, and I am concerned about the health and safety of my community and myself being exposed to hazardous chemicals. This project could also have a huge negative impact on our power grid.

TCEQ Registration Form

July 29, 2024

Nueces Green Ammonia LLC Proposed Air Quality Permit No. 174951

PLEASE PRINT

Name: Lydia C. Secrest

Mailing Address: 405 E. Ave I.

Physical Address (if different): _____

City/State: Robstown TX Zip: 75380

COMMENTS: Good Morning, In regard to the potential ammonia plant being discussed myself along with numerous others believe the plant would have numerous negative effects to local community which outweighs the potential benefits. The suggested area for the location is in close proximity and will expose the citizens to generations of air toxicity/ pollution. The proposed plant is alleged to be using clean energy to power such wind and solar energy however there are concerns the company will actually do so. In conjunction with several other refineries within 15 miles of the county the intended benefits are not worth the negative effects to the community. Specifically with Nueces county there a constant concern with water restrictions and the addition of another refinery which require large amount of water for production will negative effect us as a community. Overall, it would be in the communities best interests to deny the permit despite the potential monetary gain from corporate entities.

COMMENTS: I am opposed to the Ammonia plant in our community. The Ammonia plant and all the toxic chemicals it will be releasing from the smoke stacks and possible releases will have an adverse effect on my son. He suffers from frequent asthma and the added pollution in the air will affect him negatively. I should not have to live worrying about how the air pollution this plant will create is going to affect my son's asthma and he should not have to live with it either. This plant will release hazardous Air pollutants that has Anhydrous Ammonia, Carbon Monoxide, Nitrogen Oxides, Sulfur Dioxide. This is very concerning to me and the safety of all the children because they are, our future.

COMMENTS: Due to continued drought conditions this permit should be denied. We do not have enough water for Corpus Christi and the surrounding cities that rely on Lake Corpus Christi now. What will happen to our water when 11 million gallons of water are going to this plant on a daily basis? This is a farming community also. What kind of contaminates will be in the air and the soil? Please deny this permit request. Thank you

COMMENTS: ease reject the proposed Nueces Green Ammonia plant in Nueces County. Calallen ISD and Robstown ISD school children deserve clean air and water, and a safe outdoor environment. The wind will travel directly across the proposed area into school and residential neighborhoods. We already have a plant in the Tuloso Midway area which flares constantly, causing both environmental, light, and noise pollution. Our students deserve better than having another environmental, light, noise polluting plant in their community. The proposed plant lies in the middle of precious farmland used to provide grains and cotton. This plant cannot be allowed to build in the middle of two growing communities. Housing and shopping developments will be negatively impacted by the proposal as well. The community is growing and taxing an already sensitive ecosystem. The nearby Nueces River and Hazel Bazemore park are renowned for their rich wildlife and bird watching, both will be harmed by the addition of the proposed Nueces Green Ammonia plant. How can we allow such a monstrosity to invade our precious land and endanger human life, wildlife, and our earth? The answer is that we cannot, not in good conscience, not for greed, nor at the expense of our planet. Our families and children deserve better than to pollute our environment and skyline. Reject the proposal for Nueces Green Ammonia to build in my backyard, say, "NO!" to the chemicals, smells, noise, lights, and traffic that will harm our community.

COMMENTS: I would like to voice my opposition to the proposed ammonia plant referenced above. There are many obvious reasons why the location chosen for this project is unacceptable and it is my hope that this project can be stopped. The potential danger to the citizens who reside in the immediate vicinity and the estimated water requirements for the process are of utmost concern to me. As you consider this project, I would ask that you be honest with yourself.....would you want this in your neighborhood?

COMMENTS: I urge TCEQ to DENY this permit request. It is not in the interests of the people of Corpus Christi. We already have unclean water and air polluted by refineries that harm the communities in the area. An ammonia plant would threaten water security of residents and damage a biologically important ecosystem.

COMMENTS: Both my wife and I are approaching our 70's. The AVINA propose plant would be within 1 mile from our homestead. My wife is a confirmed Asthmatic with other medical complications. Myself, I see a cardiologist for my heart condition and an Endocrinologist for the treatment of severe Diabetes. Aside from our medical conditions we have our young grandkids that visit us regularly and like to play outside. This is especially true during the summer when they spend time with us.

I ask that TCEQ

Deny Permit #174951

Due to concerns of exposure to

the pollutants for local resident.

Elementary school students, and this site is toxic to residents
local residents should not be threatened

with reduced quality of life at the

expense of industry. TCEQ must stop

its tripping of passing permits without
the consideration of residents affected

by reckless permitting.
Citizens do not want this facility built in their

Backyards. TCEQ must consider potential effects to
agriculture in the event of a disaster or
other extraordinary circumstances.

additionally if would like
request TCEQ includes

parameters outside of

normal operations

including hurricane force

winds and how that

could affect out put of
contaminants, in the

event of an accident

the safety of local residents

needs to be considered.

COMMENTS: This is very upsetting to out an ammonia plant nearby so many homes and businesses. Our area has much land on the outskirts which would effect much less people, animals, landscapes should an emergency occur. My home is down the street from this proposed plant and I fear the possibility of an accident or that this plant could become a target. Please do not open the plant this close to families. Look to areas that are not populated. Texas has lots of space!

COMMENTS: First off, I would like to say that bringing a plant like this to the area I believe is good but my concern is really on the location. Working in the same type of industry, I have a few concerns shared by others in our area. (1) water usage - how much water being used and where it will drain to Area floods in those farm lands really bad. 2) what kind of radius is being used for any possible ammonia leaks when the north wind is blowing any fumes would go towards Robstown that is less than a mile or so away. 3) Roads being used will be 1889 to 44 or to 624 for truck transportation? (4) is there going to be some sort of flare of stem? 5) what kind of emergency response plans are going to be arranged for catastrophic releases? (RTFC, Deluge System?) 6) will it be piped in and out via pipelines or trucks, what impact will that have to traffic? 7) has an evaluation been done to how close it is to Robstown high school (Birds Eye) The public needs to be informed. Signs were posted just last week and were very vague as to what they were for.

COMMENTS: I oppose this permit to allow for this plant. I am requesting a public meeting for the public to voice their concern about this. The fire department in the area is does not have the proper equipment to respond to any emergency at any plant in their coverage area. There are way too many homes close to the area in question for a ammonia plant to be here. The comminute in this area is growing with new stores and houses going up for the community and this could drive them away from this area. There are way too many schools close to the location in question list. Plus there are nursing home with in 2 miles of the area. The health risk this would put on the people in this area is not good. PLEASE DO NOT APPROVE THIS PERMIT.

FAX:

COMMENTS: Based on the significant potential hazard to life and health of the residents near the plant and the toxicity of ammonia and potentially significant radius of exposure, not only for death, but detrimental health effects, in a rupture, release, and in flaring applications, I and my family strongly oppose this permit. Please re-locate to an area with less impact to the people nearby. This area is full of young families, kids, grandparents and others nearby who even a few excursions from destruction protocols, such as lost pilot on a flare during an emergency release could have significant impact. Even 30 ppm can cause irritation with lethal doses in the 10,000 to 30,000 ppm range (<https://www.ncbi.nlm.nih.gov/books/NBK207883/>). Even among flare designers, ammonia can be a difficult product to

adequately burn. With a maximum theoretical destruction of 99% (with a fully, adequately maintained flare), the remaining 1% of a full stream of ammonia has an impact on health and the environment.
(<https://www.zeeco.com/resources/news/ammonia-flaring-today-and-tomorrow>) Thank you for considering the impact on our community. Respectfully submitted.

COMMENTS: Good afternoon, my name is Raelynn Vallejo. I've lived in Robstown all my life. Robstown has been founded since, 1906 home to the crop of cotton. I would like to express my concerns and opinions on this issue of the avina plate. As you may all know this plate is brought to the community attention and has everyone frightened. I'm very aware of the dangers this plate can cause. Including, many disruptions towards my town. This is not just some abandoned town we are a population of 10,400 although the numbers are rapidly increasing. Robstown is a small town but, we are one huge village. We have our annual holiday parades, our famous livestock show and our very own annual cotton festivals. We have earned our name to this town and we will simply continue to grow our community. This plate will destroy our crops, the atmosphere, livestock and many pets. Numerous people and children have severe allergies and asthma. Not only is the plate next to the Memorial park where many go see their loved ones and place them in their final resting place, much noise will increase with the plate and the privacy of respect will be interrupted. We have schools half way to where the plant will be placed, Robstown ISD & Calallen ISD. We also have numerous daycare facilities near by. We have many individual home owners and farmers who live near and far but, the plant still affects our town. I simply say no to this idea of the Avina plant. How would everyone on this ideal list would like it if their huge and successful homes were destroyed because of a plate? No one would like it one bit. Everyone wants money in this world but, yet nobody cares of the issue of that will cause our town to suffer. I hope everyone can open their eyes and understand this will destroy our whole town and affects our economy.

COMMENTS: am writing this to express my deep concerns about the proposed ammonia plant in Robstown. While industrial development can bring economic benefits, the potential health risks and environmental impacts of an ammonia plant far outweigh these benefits for our community. Ammonia production involves the use of hazardous chemicals and processes that can pose significant health risks to residents. Exposure to ammonia can cause respiratory issues, skin and eye irritation, and in severe cases, lung damage and chemical burns. Given that Robstown is a populated area, the likelihood of accidental leaks or spills could expose a large number of people to these dangers, including vulnerable groups like children and the elderly. Furthermore, the environmental impact cannot be ignored. Ammonia production releases pollutants that can contaminate the air, soil, and water sources. This not only affects human health but also harms local wildlife and disrupts ecosystems. Robstown agricultural sector, a vital part of our economy, could suffer from contaminated water supplies and soil, leading to reduced crop yields and economic losses for farmers. The presence of an ammonia plant may also deter future investments in more sustainable and health-friendly industries. Robstown has the potential to attract businesses that do not pose such severe risks to public health and the environment. Encouraging green industries and renewable energy projects could provide long-term economic benefits without compromising the well-being of our community. In conclusion, the establishment of an ammonia plant in Robstown presents significant risks to public health and the environment. I urge you to consider these factors carefully and to prioritize the health and safety of our residents especially i and others who have asthma and other illnesses over industrial development. Let us work together to explore alternative opportunities that can promote economic growth while ensuring a safe and healthy environment for all. Sincerely, [Ruben Vela Jr]

COMMENTS: It is not in the best interest of the community to have this plant/facility to be built. There are far too many child facility/buildings close to the proposed site, not to mention the elderly that reside less than 2 miles from the location as well. There are concerns for health of these populations as well as those that have lung and breathing issues. Also, it will have a direct affect on property values and additional traffic in the area.

COMMENTS: The location of the proposed Ammonia Plant is centered in a populated area. It makes no sense to put a plant that generates such a toxic substance, so close to schools and neighborhoods. The site of this plant should be relocated to an area where if a gas leak would occur, it would not endanger us. I have family members with respiratory conditions which would be exacerbated by burned off releases of these gases. The fact that the only way we became aware of the Ammonia plant proposed location was on social media platforms rather than our city and county representatives, makes me suspicious of some backroom deals being made, and who they may benefit. I oppose the location of this site and request a public meeting so our concerns can be heard.

COMMENTS: I am writing to formally express my opposition to the approval of TCEQ Permit No. 174951 for NUECES GREEN AMMONIA LLC. My objections are based on several critical points related to economic, social, and infrastructural impacts that this project may have on our community.

- 1. Economic Impact on Local Businesses** The proposed development by NUECES GREEN AMMONIA LLC poses significant risks to the economic stability of existing local businesses. The introduction of a large-scale industrial operation can lead to market monopolization, where smaller, locally-owned businesses may be unable to compete with the pricing and production capacities of a large entity. This could result in the closure of small businesses, leading to job losses and a decrease in the diversity of our local economy. Additionally, the influx of a large corporation might drive up the cost of living in the area due to increased demand for housing and services, potentially displacing long-term residents and small business owners.
- 2. Strain on Public Infrastructure and Services** The proposed facility will likely place a considerable strain on our already overburdened public infrastructure. The increase in heavy vehicle traffic for transportation of materials and products will exacerbate wear and tear on our roads, necessitating more frequent and costly repairs. This will divert public funds from other essential services such as education and healthcare. Moreover, the project may demand increased utility services (water, electricity, sewage), which could lead to higher utility rates for local residents and businesses due to the required upgrades and expansions of these services.
- 3. Public Health and Safety Concerns** The operation of an industrial facility such as the one proposed can pose significant risks to public health and safety. Accidents involving hazardous materials, mechanical failures, or other unforeseen incidents could result in serious harm to workers and nearby residents. The presence of such a facility also necessitates the implementation of robust emergency response plans, which could overwhelm our local emergency services, reducing their ability to respond to other incidents effectively.
- 4. Social and Community Disruption** Large industrial projects can disrupt the social fabric of communities. The construction and operation phases often bring an influx of temporary workers, which can lead to short-term housing shortages and increased rental prices. This can strain local resources and create tension between long-term residents and transient workers. Furthermore, the social dynamics of the community might change, with potential increases in crime rates and a shift in community identity, as large-scale industrial projects often do not integrate seamlessly into smaller, close-knit communities.
- 5. Potential for Economic Inequity** The benefits of the proposed facility are unlikely to be evenly distributed across the community. While NUECES GREEN AMMONIA LLC may create some jobs, it is likely that these positions will require specialized skills that current local residents may not possess, leading to an influx of workers from outside the community. This could result in economic inequity, where the benefits of the project accrue to a small group of individuals or to those outside the community, while the broader population bears the costs.
- 6. Long-Term Economic Sustainability** The long-term economic sustainability of relying on a single large industrial entity is questionable. Diversifying our local economy by fostering a variety of small and medium-sized enterprises can provide more stable and resilient economic growth. In contrast, an over-reliance on a single industry can lead to economic vulnerability, especially if market conditions change unfavorably for that industry.
- 7. Effect on Property Values** The presence of a large industrial facility can negatively impact residential property values in the vicinity. Potential buyers may be deterred by the proximity to an industrial site, leading to a stagnation or decline in the real estate market. Current homeowners could face reduced equity in their homes, impacting their financial security and reducing the attractiveness of our community as a place to live.
- 8. Quality of Life** The introduction of a large industrial facility can significantly diminish the quality of life for local residents. Increased traffic, noise, and industrial activity can lead to a less peaceful and enjoyable living environment. The potential for round-the-clock operations means that disruptions could be a constant issue, affecting daily life and well-being.
- 9. Impact on Local Culture and Heritage** Nueces County has a rich cultural and historical

heritage that could be adversely affected by the industrialization brought about by this project. Large-scale industrial developments can lead to the loss of historical sites and diminish the cultural landscape that makes our community unique. Protecting our heritage is crucial for maintaining a sense of identity and continuity for future generations. 10. Community Cohesion and Engagement The approval and construction of this facility could lead to a fracturing of community cohesion. Differing opinions on the project's benefits and drawbacks can create divisions among residents, reducing social unity and collective community engagement. It is essential for community development initiatives to enhance rather than disrupt community cohesion. Conclusion In light of these concerns, I strongly urge the Texas Commission on Environmental Quality (TCEQ) to reject the permit application submitted by NUECES GREEN AMMONIA LLC. The potential economic, social, and infrastructural impacts on our community outweigh the proposed benefits. It is imperative that we prioritize sustainable, inclusive, and community-focused development strategies that align with the long-term well-being of our residents and local businesses. I appreciate the opportunity to provide my comments and hope that the TCEQ will carefully consider the implications of approving this permit on our community. Respectfully, Heidi W Gutierrez

COMMENTS: The plant is extremely close to multiple neighborhoods. We are very concerned about the proposed location and how that is going to affect the community. The neighborhoods will no longer be livable if this plant is approved to be built in our backyard. Rigorous facility siting study must be done and reviewed by communities before even considering granting them the permit. Thank you very much for your time.

COMMENTS: I am definitely against this ammonia plant going in at this location. There are schools, residential areas, farm land that would be affected. Not to mention the cities of Robstown and Corpus Christi. There are several schools from elementary to high schools that are right in that area that would be greatly affected. There had to be a reason they were denied a permit in Ingleside. So as a concerned citizen I would not like this company to be built here. There are other locations available that would not affect towns, schools or residential areas that would be better suited for this facility.

COMMENTS: I am writing to protest the construction of the Green Ammonia plant. The toxicity of ammonia alone should be enough for anyone to understand the harm this will do to our area. Building a plant this close to neighborhoods and schools will severely impact the health of all residents in the area and pose significant health risks to all involved. Ammonia plants also pose a risk of leaks or spills, which could lead to far more dangerous situations and put the entire area at risk. This plant will cause serious damage to the environment. Emissions can cause soil acidification, which decreases the availability of essential nutrients for vegetation, and will impact the growth and density of any plant life nearby.

COMMENTS: I am writing to express my disagreement with the proposed Avina ammonia plant in the Robstown area. Moving forward with the implementation of this plant would allow a grave injustice to be committed against both current residents inhabiting the area and potential future residents. The proposed ammonia plant would create serious health and safety concerns for surrounding neighborhoods and businesses; the 2013 West, Texas ammonia plant explosion should serve as a warning of the potential disasters an ammonia plant could inflict on our community. Moreover, the plant's construction would likely entail a negative effect on local/small businesses, especially those who are hesitant to continue operating near such a site. It is incredibly disheartening to imagine a large, out-of-state

corporation profiting off of our community's valuable land and resources. I implore all who have the capacity to to reject any further development of this proposed plant.

FAX:

COMMENTS: I urge TCEQ to deny Nueces Green Ammonia LLC Air Quality Permit number 174951. I am writing this comment representing the Wollmann Family residence approximately 1 an 1/2 miles north of the proposed plant site. I am a retired Celanese corporation employee. Prior to retirement I had seven global plant sites under my financial reporting. I was responsible for both the sites profitability and risk profiles. I participated on several emergency response teams and accident investigations. Our sites were VPP certified sites acknowledging the toxic volatile nature of both our hydrocarbon raw materials, intermediate chemicals, supplies and salable end products from birth to death. One of most toxic supply chemicals was Ammonia. It is treated as fatal if inhaled or accidentally spilled or leaked out of its dedicated storage area. Personally I am shocked to see the TCEQ even considering the construction of a Green Ammonia facility surrounded by residential housing without any type of significant buffer zone. All of Cleanses and competitor facilities were located if possible several miles from established residential or any other public establishments. All facilities had predefined infrastructure - roads, gated perimeters, rail or barge loading facilities. We usually shared our HASMAT resources especially our emergency response teams and equipment. Wind direction was constantly monitored with automated alarmed air quality sensors to assist in detecting emissions well below required health organization guidelines. Placing the proposed Ammonia plant in Nueces County will require trucking or pipeline transport directly through residential areas. This will not only increase road traffic but consequently lower property values as no one wants a production facility with its required security lighting and flare infrastructures in their background or field of vision. When the TCEQ asked for initial residential input I sent a two page commentary stating the reasons why I thought this proposal was ridiculous. To date I have received no return comments. The area between Ingleside and Aransas Pass has several abandoned industrial sites the already have industrial infrastructure, residential buffer space, rail and or water access. Three sites are within 1/2 mile of the Bay Industries fabricating site. I believe all the sites are already approved for super-fund clean up For the last several months I have been trying to get detailed information about the proposed facility to no avail. I would like to know the raw materials, supply chemicals,, effluent,, intermediate production items and finally the concentration and capacity of ammonia produced. I have been told the plant will use 4 to 6 million gallons of water per day, however with hearsay knowledge I cannot make a judgement as the number may be significantly wrong , the water may be reused and I don't have a feel for how much or how the plant effluent water will be released. Currently Nueces county is in stage 2 water restrictions with rumors of moving to stage 3 restrictions. I cannot imagine adding such a water consumer to the area Please feel free to contact me if you have any questions associated with my comments. I could easily sit here for the next few hours adding negative comments which I'm not sure would be any more productive for you. My contact number is 361-533-0864

COMMENTS: We do not support building an ammonia plant in Nueces County in the proposed location. It does not have an adequate buffer zone from urban housing , schools, and restaurants. The plant location is within a small farm plot and is not close to HASMAT infrastructure to respond to any sort of emergency. The toxicity of ammonia is beyond concern when risking the possibility of a breach from the proposed plant. Ammonia is unforgiving when inhaled causing immediate lung damage which in most cases leads to a painful death. I have spent 33 years working for Celanese chemical company and am fully aware of our strict safety protocol when using or dealing with the loading or unload of AMMONIA. I suspect the plant chemistry will require a tremendous supply of water which is currently not available in the area. WE are struggling to support families and crops with suppressed water supply as we are now in our third or fourth year of drought. The proposed plant needs to be built on the current industrial refinery/ship channel area. This area has transportation infrastructure, storage capacity and emergency response accessibility. Trucking of raw materials, water and finished product in the middle of a populated area on farm to market roads with no supporting infrastructure in my opinion is insane especially when considering the toxic nature of ammonia.

COMMENTS: I do not agree to the building of this plant in the area so close to the Calallen neighborhood or Robstown. Too close for comfort. They would be better to build it further out away from schools and communities. I am very concerned for safety and not opposed to the plant itself but the location.

COMMENTS: This permit is to build an ammonia plant in a residential area. Not only are there homes nearby, but there are also 10 schools that could be affected. No model has been created for the possibility of spills and accidents, which is very alarming. This plant needs to be built in an industrial area. There is no need to endanger lives and quality of life of people who have built their homes in a non-industrial area.

COMMENTS: Green ammonia production claim is that it reduces CO2 emissions in the production of ammonia. However, the actual process involves utilizing an electrolyzer to send a current of electricity through water to separate water and hydrogen molecules. In Texas our electrical grid cannot keep up with the increase in population and our reliance on green energy instead of natural gas has resulted in brown outs when ideal conditions do not exist for wind or solar production. Further, Nueces county currently has a severe water shortage and with Lake Mathis near 40%. We are currently in stage one water restrictions and will be in stage two in the near future. While a desalination plan is currently being discussed by City Officials, any actual water production by a future facility remains a decade away. Therefore, I oppose the facility until both the water and electrical capacity is sufficient to supply both the citizens and our current industrial districts with an adequate supply.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.

I oppose permit #174951

- I live within 3 miles of the proposed facility, and I'm concerned about about nauseous odors and emmisions this plant could bring to my community.
- I'm concerned about their proposed water usage. We are in stage drought, and looking to get into stage 3 by the end of summer.
- I am worried about the possible harms to our air, water, and land.
