Section 2. Treatment Process (Instructions Page 51)

A. Treatment process description

Provide a detailed description of the treatment process. **Include the type of treatment plant, mode of operation, and all treatment units.** Start with the plant's head works and finish with the point of discharge. Include all sludge processing and drying units. **If more than one phase exists or is proposed in the permit, a description of *each phase* must be provided**. Process description:

The existing phase is a 1.0 MGD plant consisting of two packaged plants with 8 aeration basins, 4 digesters, 2 clarifiers, and 4 chlorine contact basins in addition to a permanent facility that has 1 aeration basin, 1 digester, 1 clarifier, 1 chlorine contact basin, and 1 dechlorination basin running parallel to the package facility. The first phase of this amendment will take it up to 2.0 MGD and add 2 aeration basins and 1 digester to the permanent facility. The second phase will have a flow of 2.9 MGD and add 1 aeration basin, 2 digesters, 1 clarifier, and 1 chlorine contact basin to the permanent facility. The final phase of 3.0 MGD will have the two package plants demolished in addition to adding 1 aeration basin to the permanent facility. This in turn will make the permanent facility have a total of 5 aeration basins, 4 digesters, 2 clarifiers, 2 chlorine contact basins, and 1 dechlorination basin. From the headworks, the wastewater will travel to the aeration basins, to the clarifier where solids will be settled out and water will flow to the chlorine contact basins. Settled solids will be returned back to the headworks. In the ultimate phase, flows from the chlorine contact basin will travel to the dechlorination basin.

Section 1. All POTWs (Instructions Page 99)

A. Industrial users

Provide the number of each of the following types of industrial users (IUs) that discharge to your POTW and the daily flows from each user. See the Instructions for definitions of Categorical IUs, Significant IUs – non-categorical, and Other IUs.

If there are no users, enter 0 (zero).

Categorical IUs:

Number of IUs: 0

Average Daily Flows, in MGD: 0

Significant IUs – non-categorical:

Number of IUs: 0

Average Daily Flows, in MGD: 0

Other IUs:

Number of IUs: 0

Average Daily Flows, in MGD: 0

B. Treatment plant interference

In the past three years, has your POTW experienced treatment plant interference (see instructions)?

Yes ☐ No ☒

If yes, identify the dates, duration, description of interference, and probable cause(s) and possible source(s) of each interference event. Include the names of the IUs that may have caused the interference.

D. Pretreatment program

Does your POTW have an approved pretreatment program?

Yes ☐ No ☒

If yes, complete Section 2 only of this Worksheet.

Is your POTW required to develop an approved pretreatment program?

Yes ☐ No ☒

If yes, complete Section 2.c. and 2.d. only, and skip Section 3.

Dear Mr. Harris:

We have received the project summary transmittal letter dated April 20, 2015.

The rules which regulate the design, installation and testing of domestic wastewater projects are found in 30 TAC, Chapter 217, of the Texas Commission on Environmental Quality (TCEQ) rules titled, Design Criteria for Wastewater Systems.

Section 217.6(d), relating to case-by-case reviews, states in part that upon submittal of a summary transmittal letter, the executive director may approve of the project without reviewing a complete set of plans and specifications.

Under the authority of §217.6(e) a technical review of complete plans and specifications is not required. **However, the project proposed in the summary transmittal letter is approved for construction. Please note, that this conditional approval does not relieve the applicant of any responsibilities to obtain all other necessary permits or authorizations, such as wastewater treatment permit or other authorization as required by Chapter 26 of the Texas Water Code.** Below are provisions of the Chapter 217 regulations, which must be met as a condition of approval. These items are provided as a reminder. If you have already met these requirements, please disregard this additional notice.

1. You must keep certain materials on file for the life of the project and provide them to TCEQ upon request. These materials include an engineering report, test results, a summary transmittal letter, and the final version of the project plans and specifications. These materials shall be prepared and sealed by a Professional Engineer licensed in the State of Texas and must show substantial compliance with Chapter 217. All plans and specifications must conform to any waste discharge requirements authorized in a permit by the TCEQ. Certain specific items which shall be addressed in the engineering report are discussed in §217.6(c). Additionally, the engineering report must include all constants, graphs,

equations, and calculations needed to show substantial compliance with Chapter 217. The items which shall be included in the summary transmittal letter are addressed in §217.6(c)(1)-(10).

2. Any deviations from Chapter 217 shall be disclosed in the summary transmittal letter and the technical justifications for those deviations shall be provided in the engineering report. Any deviations from Chapter 217 shall be based on the best professional judgement of the licensed professional engineer sealing the materials and the engineer's judgement that the design would not result in a threat to public health or the environment.

3. Any variance from a Chapter 217 requirement disclosed in your summary transmittal letter is approved. If in the future, additional variances from the Chapter 217 requirements are desired for the project, each variance must be requested in writing by the design engineer. Then, the TCEQ will consider granting a written approval to the variance from the rules for the specific project and the specific circumstances.

4. Within 60 days of the completion of construction, an appointed engineer shall notify both the Wastewater Permits Section of the TCEQ and the appropriate Region Office of the date of completion. The engineer shall also provide written certification that all construction, materials, and equipment were substantially in accordance with the approved project, the rules of the TCEQ, and any change orders filed with the TCEQ. All notifications, certifications, and change orders must include the signed and dated seal of a Professional Engineer licensed in the State of Texas.

This approval does not mean that future projects will be approved without a complete plans and specifications review. The TCEQ will provide a notification of intent to review whenever a project is to undergo a complete plans and specifications review. Please be reminded of 30 TAC §217.7(a) of the rules which states, "Approval given by the executive director or other authorized review authority does not relieve an owner of any liability or responsibility with respect to designing, constructing, or operating a collection system or treatment facility in accordance with applicable commission rules and the associated wastewater permit".

If you have any questions or if we can be of any further assistance, please call me at (512) 239-0486.

Sincerely,

Hilario Arriaga, P.E.

Permit No. WQ0015264-001
WWPR Log No. 0619/007

Harris County

Dear Ms. Hallaway:

On June 3, 2019, TCEQ received the project summary transmittal letter dated June 3, 2019 for the Phase 3 expansion of the Harris County MUD District 171 wastewater Treatment facility. This project is to expand the processing capacity to the Phase III level of 0.50 MGD (average daily flow).

The rules which regulate the design, installation and testing of domestic wastewater projects are found in 30 TAC, Chapter 217, of the Texas Commission on Environmental Quality (TCEQ) rules titled, Design Criteria for Wastewater Systems.

The work undertaken within the scope of this project is:

- 2 additional aeration basins (60'x12'x10.67' SWD each)
- 1 additional clarifier (36' diameter, 10' SWD)
- 1 additional chlorine contact basin (20'x12'x8.0' SWD)
- 2 Additional aerobic sludge digesters (44'x12'x10.5' SWD each)
- 1 additional 2,200 scfm blower (3 total onsite)

The TCEQ review of the submitted information seems to indicate that the in-scope work meets at least the minimum requirements of 30 TAC Chapter 217: Design Criteria for Wastewater Systems. Given the result of the TCEQ review the project as detailed is conditionally approved for completion.

You must keep certain materials on file for the life of the project and provide them to TCEQ upon request. These materials include an engineering report, test results, a summary transmittal letter, and the final version of the project plans and specifications. These materials shall be prepared and sealed by a Professional Engineer licensed in the State of Texas and must show substantial compliance with Chapter 217. All plans and specifications must conform to any waste discharge requirements authorized in a permit by the TCEQ. Certain specific items which

shall be addressed in the engineering report are discussed in §217.10. Additionally, the engineering report must include all constants, graphs, equations, and calculations needed to show substantial compliance with Chapter 217.

No variances of any Chapter 217 requirements were requested or granted as part of this project review. If in the future, should any variances from the Chapter 217 requirements be desired for the project, each variance must be requested in writing by the design engineer. Then, the TCEQ will consider granting a written approval to the variance from the rules for the specific project and the specific circumstances.

Within 60 days of the completion of construction, an appointed engineer shall notify both the Wastewater Permits Section of the TCEQ and the appropriate Region Office of the date of completion. The engineer shall also provide written certification that all construction, materials, and equipment were substantially in accordance with the approved project, the rules of the TCEQ, and any change orders filed with the TCEQ. All notifications, certifications, and change orders must include the signed and dated seal of a Professional Engineer licensed in the State of Texas.

Please be reminded of 30 TAC §217.7(a) of the rules which states, "Approval given by the executive director or other authorized review authority does not relieve an owner of any liability or responsibility with respect to designing, constructing, or operating a collection system or treatment facility in accordance with applicable commission rules and the associated wastewater permit".

Dear Mr. Hunt:

Texas Commission on Environmental Quality (TCCEQ) received the project summary transmittal letter dated November 16, 2020, along with the subsequent submittal of additional project information for the final phase expansion of the Harris County MUD 171 Wastewater Treatment Plant (WWTP). This project is to expand the treatment facility from phase III level of 0.50 MGD to the permitted final phase level of 1.0 MGD. The engineer indicates the proposed project facility will be capable of meeting the permitted ffluent limitations of 10 mg/L of CBOD5, 15 mg/L of TSS, and 2 mg/L of Ammonia Nitrogen.

The rules which regulate the design, installation and testing of domestic wastewater projects are found in 30 TAC, Chapter 217, of the Texas Commission on Environmental Quality (TCEQ) rules titled, Design Criteria for Wastewater Systems.

The existing WWTP components include:

- Four (4) Aeration basins: each 60' x 12' x 10.67' (total volume 30,730 cu ft)
- Two (2) Clarifiers: 36' diameter x 10' SWD
- Two (2) Chlorine contact basins: each 20' x 12' x 8.0' SWD (total volume 3,840 cu ft)
- Four (4) Aerobic digesters; each 44' x 12' x 10.5' SWD (total volume 22,176 cu ft)
- Three (3) blowers, capacity each 2,200 scfm (two duty, one spare)

The proposed WWTP components will include:

- One (1) Aeration basin: 82' x 30'x 16.5 SWD (volume 40,590 cu ft)
- One (1) Clarifier 80' dimeter x 16.5' SWD
- One (1) Chlorine contact basin: 44' x 27'x 10.5' (volume 12,474 cu ft)
- One (1) Aerobic digester: 68' x 19' x 16.5' SWD (volume 21,318 cu ft)
- Two (2) Aeration basin blowers, each 2,800 scfm (one duty, one spare)

- Two (2) Digester basin blowers, each 1,051 scfm (one duty, one spare)
- Two (2) Chlorine contact basin blowers, each 61 scfm (one duty, one spare)
- Gas chlorination system and dechlorination system
- Sludge pumping station
- Scum pumping station
- One (1) 1000 kW permanent generator

Our review indicated that the documents provided are in general compliance with the applicable minimum standards as set forth in Chapter 217, Design Criteria for Domestic Wastewater Systems. On that basis, this project is conditionally approved for construction. The condition is that all work be completed to the requirements of Chapter 217.

You must keep certain materials on file for the life of the project and provide them to TCEQ upon request. These materials include an engineering report, test results, a summary transmittal letter, and the final version of the project plans and specifications. These materials shall be prepared and sealed by a Professional Engineer licensed in the State of Texas and must show substantial compliance with Chapter 217. All plans and specifications must conform to any waste discharge requirements authorized in a permit by the TCEQ. Certain specific items which shall be addressed in the engineering report are discussed in §217.6(d). Additionally, the engineering report must include all constants, graphs, equations, and calculations needed to show substantial compliance with Chapter 217. The items which shall be included in the summary transmittal letter are addressed in §217.6(d)(1)-(9).

Within 60 days of the completion of construction, an appointed engineer shall notify both the Wastewater Permits Section of the TCEQ and the appropriate Region Office of the date of completion. The engineer shall also provide written certification that all construction, materials, and equipment were substantially in accordance with the approved project, the rules of the TCEQ, and any change orders filed with the TCEQ. All notifications, certifications, and change orders must include the signed and dated seal of a Professional Engineer licensed in the State of Texas.

Please be reminded of 30 TAC §217.7(a) of the rules which states, "Approval given by the executive director or other authorized review authority does not relieve an owner of any liability or responsibility with respect to designing, constructing, or operating a collection system or treatment facility in accordance with applicable commission rules and the associated wastewater permit".

No. 171 for the construction of a wastewater treatment plant (WWTP) to serve an ultimate average flow of 3.0 million gallons per day. The application requires all applicants to correspond with all WWTPs and sanitary sewer collection systems within a three-mile radius of the wastewater service area to determine if one or more have the necessary collection system and plant capacity to accept the proposed increase in flow.

As part of this application, I am requesting a response from the plant representative stating whether or not your facility has unused capacity to provide the proposed Harris County M.U.D. No. 171 with wastewater treatment service (in lieu of the proposed WWTP). The wastewater service area is located approximately 3,000 feet southwest of the intersection of Peek Road and Beckendorff Road.

Your response to this request on or before June 11, 2021 would be greatly appreciated. Responses can be sent by email to KHunt@bgeinc.com or by regular mail, at my attention, to 10777 Westheimer Blvd., Suite 400. If you have any questions regarding this matter, contact me at (281) 558-8700. Thank you for your attention to this important matter.

Attachment 11 – Design and Process Calculations

Corresponds to Domestic Technical Report 1.1, Section 4, Page 26

Attachment 11 - Design Calculations

Corresponds to Domestic Technical Report 1.1, Section 4, Page 26

Existing Interim 1A:

1. Influent Flow

Average Daily Flow	1.0 mgd
2-hour Peak Flow	4.0 mgd equivalent
Influent BOD	264 mg/l

Design Organic Load 2,202 lb BOD_5/day

$$264\frac{mg}{l} \times 1.0\ mgd \times 8.34 = 2{,}202\ lb\ BOD5/day$$

2. Aeration Basins

Design criteria allows a maximum BOD_5 loading of 35 lb BOD_5/day per 1,000 cu. ft of capacity.

$$\frac{1000 cu.ft}{35\frac{lb.BOD5}{day}} \times 2{,}202\ \frac{lb\ BOD_5}{day} = 62{,}914\ cu.ft\ required$$

There are four (4) aeration basins, each with an area of 720 sq. ft x 10.67 ft SWD.

$$720\ sq.ft \times 10.67\ ft = 7{,}682.4\ cu.ft$$
$$4\ units \times 7{,}682.4\ cu.ft = 30{,}729.6\ cu.ft$$

There is one (1) aeration basin, with an area of 2,460 sq. ft x 16 ft SWD.

$$2{,}460\ \ sq.ft \times 16ft = 39{,}360\ cu.ft$$

Total aeration basin volume provided = 90,089.6 cu ft

3. Clarifier

Design requirements are 1,200 gal per day per sq. ft at peak flow, 1.8 hours minimum detention time at peak flow.

$$\frac{4{,}000{,}000\ gal/day}{1{,}200\ \frac{gal/day}{sq.ft}} = 3{,}333\ sq.ft\ required$$

$$\frac{4{,}000{,}000\ \frac{gal}{day} * 1.8\ hours}{24\ \frac{hrs}{day} * 7.48\ \frac{gal}{cu\ ft}} = 40{,}107\ cu\ ft\ required$$

There are two (2) clarifiers, each with an area of 1,018 sq. ft x 10 ft SWD.

$$1{,}018\ sq.ft \times 10\ ft = 10{,}180\ cu.ft$$
$$2\ units \times 10{,}180\ cu.ft = 20{,}360\ cu.ft$$

There is one (1) clarifier, with an area of 5,026 sq. ft x 15.5 ft SWD.

$$5{,}026\ sq.ft \times 15.5\ ft = 77{,}903\ cu.ft$$

Total Clarifier area = 7,062 sq ft. Total Clarifier volume = 98,263 cu ft.

4. Chlorine Contact and Dechlorination Basin

Design requirement is 20 minutes contact time at peak flow.

(20 min X 4,000,000 gal/day)/(1440 min/day X 7.48 gal/cu ft) = 7,427 cu ft required

There are two (2) chlorine contact basins, each with an area of 240 sq. ft x 9.667 ft SWD, and each has a 4x4 ft dechlorination cell at the end.

$$240\ sq.ft \times 9.667\ ft = 2{,}320\ cu.ft$$
$$2\ units \times 2{,}320\ cu.ft = 4{,}640 cu.ft$$

There is one (1) chlorine contact basin with an area of 1,080 sq. ft x 10.5 ft SWD.

$$1{,}080\ sq.ft \times 10.5\ ft = 11{,}340\ cu.ft$$

There is one (1) additional dechlorination basin, with an area of 231 sq. ft x 7 ft SWD.

$$231\ sq.ft \times 7\ ft = 1{,}617\ cu.ft$$

Total chlorine contact basin volume = 15,980cu ft.

5. Aerobic Digesters

Design criteria requires digester basins to be sized based on 40-day solids retention time at 20 degrees C for land application beneficial use.

At a total SRT of 9 days in the aeration basins, the total Waste Activated Sludge (WAS) flow will be approximately 0.015 MGD at 7000 mg/l, or 876 lbs/day.

Thickened to 2% TS (20,000 mg/L), the volume required for 40 days digestion is:

$$0.015\ MGD \times \left(\frac{7000}{20000}\right) \times \frac{1{,}000{,}000 gal}{MG} X\ \frac{cuft}{7.48\ gal}\ X\ 40\ days = 28{,}075\ cuft$$

There are four (4) digesters, each with an area of 528 sq. ft x 10.5 ft SWD.

$$528\ sq.ft \times 10.5\ ft = 5{,}544\ cu.ft$$
$$4\ units \times 5{,}544\ cu.ft = 22{,}176\ cu.ft$$

There is one (1) digester, with an area of 1,483.5 sq. ft x 15 ft SWD.

$$1{,}483.5\ sq.ft \times 15ft = 22{,}253\ cu.ft$$

Total digestion volume provided is 44,429 cu ft.

Attachment 11 - Design Calculations

Interim IB:

1. Influent Flow

Average Daily Flow	2.0 mgd
2-hour Peak Flow	8.0 mgd equivalent
Influent BOD	264 mg/l

Design Organic Load 4,404 lb BOD_5/day

$$264\ mg/l \times 2.0\ mgd \times 8.34 = 4{,}404\ lbBOD5/day$$

2. Aeration Basins

Design criteria allow a maximum BOD_5 loading of 35 lb BOD_5/day per 1,000 cu. ft of capacity.

$$\frac{1000 cu.ft}{35\frac{lb.BOD5}{day}} \times 4{,}404\ \frac{lb.BOD_5}{day} = 125{,}829\ cu.ft\ required$$

There are four (4) aeration basins, each with an area of 720 sq. ft x 10.67 ft SWD.

$$720\ sq.ft \times 10.67\ ft = 7{,}682.4\ cu.ft$$
$$4\ units \times 7{,}682.4\ cu.ft = 30{,}729.6\ cu.ft$$

There will be three (3) aeration basins, each with an area of 2,460 sq. ft x 16 ft SWD.

$$2{,}460\ \ sq.ft \times 16\ ft = 39{,}360\ cu.ft$$
$$3\ units \times 39{,}360\ cu.ft = 118{,}080\ cu.ft$$

Total aeration basin volume provided = 148,810 cu ft.

3. Clarifier

Design requirements are 1,200 gal per day per sq. ft at peak flow, 1.8 hours minimum detention time at peak flow.

$$\frac{8{,}000{,}000\ gal/day}{1{,}200\ \frac{gal/day}{sq.ft}} = 6{,}667\ sq.ft\ required$$

$$\frac{8{,}000{,}000\ \frac{gal}{day} * 1.8\ hours}{24\ \frac{hrs}{day} * 7.48\ \frac{gal}{cu\ ft}} = 80{,}214\ cu\ ft\ required$$

There are two (2) clarifiers, each with an area of 1,018 sq. ft x 10 ft SWD.

$$1{,}018\ sq.ft \times 10\ ft = 10{,}180\ cu.ft$$
$$2\ units \times 10{,}180\ cu.ft = 20{,}360\ cu.ft$$

There is one (1) clarifier, with an area of 5,026 sq. ft x 15.5 ft SWD.

$$5{,}026\ sq.ft \times 15.5\ ft = 77{,}903\ cu.ft$$

Total Clarifier area = 7,062 sq ft. Total Clarifier volume = 98,263 cu ft.

4. Chlorine Contact and Dechlorination Basin

Design requirement is 20 minutes contact time at peak flow.

(20 min X 8,000,000 gal/day)/(1440 min/day X 7.48 gal/cu ft) = 14,854 cu ft required

There are two (2) chlorine contact basins, each with an area of 245 sq. ft x 10.33 ft SWD, and each has a 4x4 ft dechlorination cell at the end.

$$245\ sq.ft \times 9.667\ ft = 2{,}320\ cu.ft$$
$$2\ units \times 2{,}320\ cu.ft = 4{,}640\ cu.ft$$

There is one (1) chlorine contact basin with an area of 1,080 sq. ft x 10.5 ft SWD.

At a total SRT of 9 days in the aeration basins, the total Waste Activated Sludge (WAS) flow will be approximately 0.03 MGD at 7000 mg/l, or 1751 lbs/day.

Volatiles-
C=Vinyl Chloride, Styrene, MTBE, and 2-Chloroethyl Vinyl Ether are highly reactive compounds when samples are preserved with acids (pH <2). 2-Chloroethyl Vinyl Ether recoveries deteriorate with acid preservative. Acrolein or Acrylonitrile should be received with acidic preservation at pH> 4-5 and analyzed as soon as possible if it's a compound of interest.

Site Name: Harris County Municipal District No. 171 Wastewater Treatment Plant (RN107309437)

Dear Ms. Michael:

We received your memo, dated October 29, 2021 with comments for the referenced Harris County Municipal Utility District No. 171 Wastewater Treatment Plant Permit Renewal Application (Permit No. WQ0015264001). The following are our proposed resolutions to each comment:

1. **Section III. Item 23 and 24 on page 2 of the Core Data Form:** Thank you for addressing these items. However, we need to get your confirmation which address we use in the permit. Please confirm.

   RESPONSE: Please use the description of physical location in the permit. Description of physical location shall read "Approximately 3,000 feet southwest of the intersection of Peek Road and Beckendorf Road."

2. **Section 13 of Municipal, item B on page 11 of the Administrative Report 1.0:** Thank you for providing the USGS Topographic Map. However, the map is insufficient because it doesn't show the discharge route. Please submit a USGS map showing the applicants property, facility boundaries, the point of discharge, highlighted discharge route (using a see-through highlighter) for 3 miles downstream or until it reaches a classified segment from the point of discharge, and 1 mile radius in all directions of the site. The required information should be shown and clearly labeled, the stream characteristics, must be visible and the map must have a date and a scale.

   RESPONSE: The USGS map has been updated to include the items listed above. Please see attached.

3. **Section 14, The signature page on Page 13 of the Administrative Report:** Thank you for providing the signature page. However, it is not completed, please submit a completed signature page bearing the notarized signature of a principal executive officer. The notary is required to witness the signature and complete all notary information. The signature dates should correspond and has to be original.

   RESPONSE: Apologies for the error on the signature page, an incorrect copy was provided in the original submittal. Please see attached for the correct signature page with notary information.

4. **Section 1, item A, affected landowner information on page 14 of the Administrative Report 1.1:** Thank you for providing the affected landowner's map. However, the map provided is insufficient.

- The facility boundary within the applicant property boundary is not identified
- The affected landowner at the east side of the applicant property is not delineated

- As per the instruction, it is only requested to highlight and show the landowners located on both sides of the discharge route for **one full stream mile** downstream of the point of discharge not for 3 miles. And please update the mailing list and the mailing labels accordingly.

RESPONSE: The affected landowners map, mailing list and mailing labels have been updated. Please see attached.

5. **Section 1, item B, affected landowner information on page 14 of the Administrative Report 1.1:** The application indicates the cross-referenced mailing list is attached. However, we are an able to location the cross-referenced mailing list. Please submit the mailing list.

   RESPONSE: The affected landowners mailing list has been updated. Please see attached

Mr. Hunt,

I am from the water quality assessment team and working on the subject permit. Do you have any size information about the detention pond (like average water depth).

Thanks,

Xing

Greetings – your interpretation is essentially correct: the "man-made ditch" was expanded into the detention basin. The detention basin still overflows to the same point as before expansion and the outfall has never been moved. See time-series satellite pictures below. Let me know if you need to discuss.

Hi Mr. Hunt,

I just left a voicemail with your office. In the current permit, the first receiving water is a man-made ditch. From Google Earth images is now shown as a 53-acre detention basin. Will you please verify this or let me know if the discharge has been rerouted in any way.

Thank you,

Greetings – thank you for the opportunity to clarify.

The items listed will all be existing (the permanent units are currently under construction). No units are being demolished for this phase. The following facilities are being proposed to meet the 2.0 MGD ADF and 8.0 MGD PDF total flows:

The existing WWTP components include:

- Four (4) Aeration basins (packaged plant): each 60' x 12' x 10.67' (total volume 30,730 cu ft)
- One (1) Aeration basin (permanent): 82' x 30'x 16.5 SWD (volume 40,590 cu ft)
- Two (2) Clarifiers (packaged): 36' diameter x 10' SWD
- One (1) Clarifier (permanent): 80' diameter x 16.5' SWD
- Two (2) Chlorine contact basins (packaged): each 20' x 12' x 8.o' SWD (total volume 3,840 cu ft)
- One (1) Chlorine contact basin (permanent): 44' x 27'x 10.5' (volume 12,474 cu ft)
- Four (4) Aerobic digesters (packaged): each 44' x 12' x 10.5' SWD (total volume 22,176 cu ft)
- One (1) Aerobic digester (permanent): 68' x 19' x 16.5' SWD (volume 21,318 cu ft)
- Three (3) blowers, capacity each 2,200 scfm (two duty, one spare)
- Two (2) Aeration basin blowers, each 2,800 scfm (one duty, one spare)
- Two (2) Digester basin blowers, each 1,051 scfm (one duty, one spare)
- Two (2) Chlorine contact basin blowers, each 61 scfm (one duty, one spare)
- Gas chlorination system and dechlorination system
- Sludge pumping station
- Scum pumping station
- One (1) 1000 kW permanent generator

The proposed WWTP components will include:

- Two (2) Aeration basins (permanent): 82' x 30'x 16.5 SWD (volume 81,180 cu ft)
- One (1) Aerobic digester (permanent): 68' x 19' x 16.5' SWD (volume 21,318 cu ft)
- One (1) Aeration basin blower, 2,800 scfm

Subject: Harris County MUD 171 wastewater expansion

Mr. Hunt,

TCEQ has received the summary transmittal letter for the Phase WWTP for the HC MUD 171. This project is being reviewed. Upon reading the letter I am having some question about what is actually taking place in the scope of work for this project.

In reading the bullets listed the following questions arise

From what I approved last year

The existing WWTP components include:

- Four (4) Aeration basins: each 60' x 12' x 10.67' (total volume 30,730 cu ft)
- Two (2) Clarifiers: 36' diameter x 10' SWD
- Two (2) Chlorine contact basins: each 20' x 12' x 8.o' SWD (total volume 3,840 cu ft)

• Four (4) Aerobic digesters; each 44' x 12' x 10.5' SWD (total volume 22,176 cu ft)

\fi369• Three (3) blowers, capacity each 2,200 scfm (two duty, one spare)The proposed WWTP components will include:

• One (1) Aeration basin: 82' x 3o'x 16.5 SWD (volume 40,590 cu ft)

• One (1) Clarifier 80' dimeter x 16.5' SWD

• One (1) Chlorine contact basin: 44' x 27'x 10.5' (volume 12,474 cu ft)

• One (1) Aerobic digester: 68' x 19' x 16.5' SWD (volume 21,318 cu ft)

• Two (2) Aeration basin blowers, each 2,800 scfm (one duty, one spare)

• Two (2) Digester basin blowers, each 1,051 scfm (one duty, one spare)

• Two (2) Chlorine contact basin blowers, each 61 scfm (one duty, one spare)

• Gas chlorination system and dechlorination system

• Sludge pumping station

• Scum pumping station

• One (1) 1000 kW permanent generator

For the 2 MGD plant what of the above is staying and what, if anything, is being demolished and removed from site?

What are sizes of the different treatment units, blowers, pumps etc being added to expand the treatable flow to 2 MGD ADF, 8 MGD PDF

Please let me know. Thank you.

Abdur,
Attached "Attachment 12" is what we submitted in the permit. On the National Climatic Data Center website that is provided in the permit instructions, the latest plotted wind rose is from 1961 for Station No. 12960 – Houston/Intercontinental Airport. I dug into it some more and found the attached "IAH_yearly" image for Jan 1970-Sept 2022. The website has monthly breakdowns as well but I have attached the yearly climatology wind rose plot.

Please let me know if you need any additional information.

Shiann,
If the copy you have in the application is latest available in the website,
Then pls give me the station No. (see following).
I do not see that in the wind rose map.

Abdur

Comment: 6:

Christopher and Donnisha Spicer expressed concern about wind studies are outdated, more updated and closer proximity wind studies need to be performed.

Response 6:

TCEQ's instructions for the Municipal Wastewater Permit application, form number TCEQ-10053-inst, provides a link to the National Weather and Climate Center where applicants can download datasets of wind rose plot images. The period of records is 1984-1992. This application included the wind rose available from the National Weather and Climate Center for the Houston area from station number <<Station No. pls>>. The information provided complied with TCEQ's rules and TPDES application requirements.
