

COMMENTS: Our family and neighbors on Sperry Rd Oppose the Black Mountain Limestone Mining Plant planning to build a 600 acre cement and blasting plant 1 mile from our property. We are the 4th generation to live on this land raising cattle and crops- living the American dream. Until we realized the construction of this plant will destroy our dream and every generation after us. Please help us breathe clean air, safe water and soil for everyone's health by stopping this plant from coming to our neighborhood.

COMMENTS: I am contesting the approval of concrete kiln and limestone mine to be built in Dorchester TX. We have a 200 acre lot of land within a mile of the proposed concrete kiln location, where we farm and have cattle. I am worried about the environmental impact it will have on the land and the animals on the farm. Our corn is sold out to commercial companies mainly for feed. A lot of the off puts of chemicals from the kiln would work their way into the food itself

COMMENTS: I am writing to voice my opposition in regards to the proposed concrete plant. Too many negative affects will be a result of a facility such as the concrete plant. Environment, economy, and health are just a few things that will suffer if this plant is constructed and operational. I understand operations like this are necessary, but it is not a good fit for our community.

COMMENTS: I am against the permitting of this plant less than 2 miles from my residence because of noise pollution, air pollution, excessive draw on our water table, the obvious drop in property values and excessive heavy vehicle traffic in our community if this plant is allowed to be built and operated. My family moved here two years ago to get away from the problems this company will bring to our quiet country living and this plant will destroy my place of retirement. Again, I am 100% against the permitting of this company to operate this close to our community.

COMMENTS: For the record I am 100% against the operation of this plant so close to my home. I am 76 years old, retired and have numerous health problems. I am required to use several life support devices including CPAP and pacemaker to survive. Any pollutants emitted from this plant will adversely affect me, my family and my animals. I also do not like the adverse effects this plant will have on my property value. I do not like the additional truck traffic that will be added to our area. Again, I am totally against the building and operation of this plant in this area.

COMMENTS: Mi preocupación con respecto al nuevo desarrollo que quiere venir al condado de Grayson son mis clientes y especialmente cómo las personas con las que hago negocios y que amo se verán afectadas. Tengo muchos clientes y seres queridos que tienen asma, problemas de corazón y EPOC que sé que se verán afectados. Sé que el desarrollo de Cottonwood en Dorchester está a solo unas pocas millas de más de 3.500 casas. Me gusta conducir por las carreteras secundarias de Dorchester para escapar y eso es algo que me gustaría seguir haciendo. Otro gran problema que veo es que nunca vi ninguna señal publicada en español para alertar a nadie en la comunidad hispana, ni siquiera se publicó nada dentro de ningún periódico hispano ni había un PSD para alertar a nadie en la comunidad hispana de tal desarrollo que amenaza la salud llegando al condado de Grayson.

COMMENTS: RE: Permit # 167047 I am writing to encourage you not to allow this permit in North Texas. We own a farm 11 miles east of the proposed site. We raise wheat, milo, corn, sorghum and cattle. The air quality will be affected by this disastrous cooking of hazardous chemicals. The wastewater will affect our livestock and fish/birds on our stock tanks. Black Mountain claims that they are further than 100Km from the Oklahoma state line. This obviously incorrect since the state line is approximately 48 Kilometers from the proposed site. Therefore, they are not notifying or considering the State of Oklahoma or the Choctaw Nation and their facilities in the data for the permit application. - Additionally, Black Mountain claims that a Disaster Review (a registered plan in case of an emergency) is not necessary. However, since the plant will be storing and using NH₃ (a type of ammonia) they are required to include a Disaster Review. Howe High school is located 5 miles from the site. Black Mountain claims that this plant will not result in an increase of additional heavy industry businesses, including concrete plants. This claim is most likely false. These industries will likely come in to support the machinery, need for materials, supplies, etc., that the plant will require for operation, as well as to utilize the product from the plant to supply a concrete plant.

COMMENTS: Would you trust the science enough to live less than a mile from the plant with your children? I'm sorry, but I don't. I've seen what these kilns do, you can not say they are healthy for children in the immediate area. And there's absolutely no way there won't be dust and residue everywhere. I could go outside throw dust in the air and it will hit my neighbors. But 18 wheelers - this processing and dumping - everything they're going to do won't? Because that's what I heard them claim at the public hearing. Children live here, people live here. Please do not do this. We love where we live and this will ruin it. 2. This will also TANK our property values and land values. What we worked long and hard for, put our blood sweat and tears into, and immediately a lot of us will be upside down on our property and homes. I personally will be. We just bought and moved here - we don't have the money to leave and we won't be able to sell. We would literally be screwed. I will not want my children here with that less than a mile from us. 3. I know this is for the air quality permit but come on, they're submitted to lose the comments?!? This is a joke right? Doesn't this feel shady to you? 4. Maybe to pass this - you require the company to buy all our land and homes within a 5 miles radius. I know you probably can't enforce that. So maybe just deny it.

COMMENTS: Absolutely appalled and saddened to hear of the potential mining kiln in Dorchester. We just moved here a month ago, to get out of the rapidly growing prosper/celina area, and find a calmer, Texas rooted town that still values livestock, land, and less citywide pollution. This is horrifying for the health of our children, our air quality, our water...so many things to be upset about with this. As a family who values our gardens and livestock and is proud not to have to worry about pollutants on our property, I am just so saddened that anyone would let this occur. Please, do not let this become the thing Dorchester is known for. This is such a shame. Would never have moved here if we had known this. Terrible decision for this town, the land and the livestock, and the Texas tradition. Appalled.

COMMENTS: I am writing as a mother, a #1 New York Times bestselling author, a pastor's wife, a proud Texan born and raised, who spent her entire life savings on a dream property just under 3 miles from the proposed cement kiln. I homeschool my children. I grow my own food. I have put love and care into my land, and chose it because of the safety and health of Dorchester as it stands. This is a rapidly growing area, just north of Celina, and while I understand cement is necessary for growth, I also understand it should not be to the detriment of the people who are going to call this area home...as does Dan Patrick, and hundreds of other citizens who previously commented on the last application, only to have them swept under the rug with this new adjustment. Our air quality matters. Noise pollution matters, especially with how many homes are being built in this very area. If one is to understand how detrimental this could be, we must look at the breathing problems to children and elderly in Midlothian, Texas, and how it has utterly destroyed the area. Sherman and Dorchester deserve to be a place of prosperity and growth, not chemical biohazards and false accusations of "safe air quality from Black Mountain. I am asking, to the point of begging, for Black Mountain to be turned away and sent elsewhere, where there is not a thriving community of citizens already established. The people do not want them here. Black Mountain's representative himself said he would not live within 3 miles of this kiln. And yet, those of us who live here will be forced to lose land value and flee. Will TCEQ or Black Mountain be offering us financial support when we lose our property, when everything is covered in kiln dust, when our water (which there is no permit for), becomes soiled by chemical runoff? If TCEQ is for Texas, then TCEQ would be wise to consider the voice of the people. We do not stand for this, and it is a danger to the health of those nearby. If not the people, consider the local water runoffs, the airport with a control tower right beside the property, and the danger of no consideration to our drinking and bathing water. Please, I implore you, have a heart for the people of Texas and keep Black Mountain out of our beautiful town.

COMMENTS: Certainly: It should be evident that proceeding with the construction of the plant at this specific location is not feasible. The exceptional nature of this community surpasses any prior encounters for all involved parties. Upholding honesty, integrity, accountability, transparency and thoroughness in our assessments is paramount. Therefore, you as hopefully decent human beings need to prevent this permit from taking place. We as a community will NOT back down and are ready to fight for what is right!

COMMENTS: I strongly oppose the Dorchester cement plant !!! I live 3.5 miles north of the proposed site at 385 Preston Meadow Road which is in the path of any type of pollution. I attended the public meeting in Sherman on March 25th. Why wasn't there any type of illustration or drawings to show what this plant will look like such as an architecture type plan or any existing photos ? Also there was no type of layout of this facility on a map from a plan view to show the location and plant size, etc. I was and now disappointed this information is not currently provided to the public. Both panels at the meeting (Black Mountain and TCEQ) acted like they were not that well prepared. Would any TCEQ or any Black Mountain employee live near such a facility and raise their family. I think not !!! Please disapprove of this cement facility at Dorchester, Texas ! Regards, Ray H. Purdom Sherman, Texas 903-821-8228

COMMENTS: This is a beautiful area that would be negatively affected by this plant. Numerous plants, trees, and wildlife call this home and it would be incredibly disappointing to see Dorchester exploited in this way. Furthermore, this is wide open country with numerous ranches, homesteads, and larger acre homesites. The winds would carry pollution to every corner of North Collin and Grayson counties. So much development is already occurring along the 289 corridor that will provide plenty of high tech jobs and employment. This plant would just be an unsightly eye-sore that would only benefit it's owners that undoubtedly don't live anywhere near this proposed site. Let's STOP this project!

COMMENTS: Attached you will find a letter regarding our concerns about the Black Mountain Cement Kiln. Please review our letter and keep us posted on the upcoming events. Thank you, Justin and Kathy Raner 6815 Mackey Rd Dorchester, Texas

Dorchester Texas Kiln Concern (Permit number 167047)

TCEQ,

My family and I live at 6815 Mackey Road, Dorchester, Texas 75459. I have lived here for 60 years my mother was raised here and her father farmed land in this immediate area. As you must know we were shocked to learn Black Mountain was planning to place a Cement Kiln just a very short distance from our back yard. This kiln is technically in the Dorchester Baptist Church backyard and we are less than a mile from the church. The home we live in we just built and moved in on January of 2019 so our home is still new this plant site will decrease the value of our property as well as everyone within our county. BM (Black Mountain) Dorchester applied for permits to TCEQ to construct this plant which I ask that you (TCEQ) investigate the answers that BM Dorchester gave on the permit and validate the correctness of their answers. This should include:

- A. Lack of compliance with bilingual requirement which states that they must comply with the bilingual requirements of the local elementary and middle schools. Howe ISD, Gunter ISD and Sherman ISD all have bilingual requirement in their elementary and middle schools, therefore all of the signage that Black Mountain posts must be in English and Spanish.
- B. First Baptist Church Dorchester has a chartered school within 3,000 feet of the plant site. Black Mountain omits this from the information on their permit application.
- C. Black Mountain does not recognize the Dorchester Airport (TXAerosport Aerodrome) and therefore does not include it in their permit application.
- D. Black Mountain claims that they are further than 100 km from the Oklahoma state line. This is incorrect. Since that state line is approximately 48 km from the proposed site. Therefore, they are not notifying or considering the State of Oklahoma or the Choctaw Nation and their facilities in the data for their permit application.
- E. Black Mountain claims that a Disaster Review (a registered plan in case of an emergency) is not necessary. However, since the plant will be storing and using NH₃ (a type of ammonia) they are required to include a Disaster Review.

One of the permits is called a PSD permit. This permit addresses how the proposed facility affects the air, water etc. regarding the PSD permit. I ask you to please consider:

- 1. Hagerman Wildlife Refuge – this is not currently designated as Type 1 (federal parks and/or wildlife areas) but fits all criteria and may be designated as Type 1 at any time.
- 2. Lack of written plan for the contamination of the of the Choctaw and Trinity watershed systems.
- 3. Lack of a detailed plan to utilize equipment that is truly BACT (best available control technology) and that produces a maximum reduction of all pollution and emissions.
- 4. Black Mountains failure to produce a study of the local limestone including an expulsion test showing what organic compounds and pollutants will be generated from the daily operation of the kiln.
- 5. On the permit application Black Mountain claims that this plant will not result in an increase of additional heavy industry businesses, including concrete plants. The claim is most likely false! These industries will likely come in to support the machinery, need the materials, supplies, etc. that the plant will require for operation as well as to utilize the product from the plant to supply a concrete plant. In short, this plant will create a demand and other unwanted business will come in to supply that demand.
- 6. Currently Black Mountain is utilizing the meteorological data from the Denton Regional Airport study. The property for the plant is 180 feet higher than the Denton Airport. The wind conditions at the plant construction site are significantly different (higher speed and greater sustained winds) than they are at Denton Regional Airport. I ask that a new study be conducted for this plant site.

7. Also, regarding concerns with air currents, the property surface roughness currently falls under the "Low Range" category. This will cause the passing air currents to be more turbulent. This will affect the airport, as well as causing the air currents to pick up more of the pollution from the plant and carry the emissions from the plant to the downwind areas. This result is vastly different from the impact predication that Black Mountain submitted included in their permit application.

My family as well as our community ask that you review Black Mountains application, look into these errors and what was failed to mention in their application and DENY their permit.

Thank you for consideration,

Justin & Kathy Raner

COMMENTS: I would like to express my concern over the opening of his Dorchester plant. The effects it would have when the air and water quality and general quality of life in the area are far outweighing the benefits of production. Numerous toxins and particulate should be released into the air in an area which currently is seen far more growth having a negative environmental impact. Up to a dozen communities and family ranches and farms within a 50 mi radius will be affected when the plant is in full production mode from the blasting releasing toxins in the air to the environmental damage to the increased commercial and trucking traffic in a primarily rural area would all have a negative impact to the living quality currently enjoyed there. I employ you to please reconsider and deny the application to build such a facility that will have far reaching and long-term negative impact to the people and environment within a 50 mi radius. Thank you for your consideration of this matter.

COMMENTS: DO NOT ALLOW THE BM DORCHESTER CEMENT PLANT TO BE BUILT! BIG MONEY GROUP'S THAT POLLUTE OUR ALREADY HIGHLY POLLUTED CITY AND COUNTY IS FORBIDDEN! WE ALREADY HAVE A SUPER FUND SITE ON 1700 W Morton St, Denison, TX 75020 THAT DEVELOPERS CLAIM TO BE POLLUTION FREE WHICH IS A LIE! Denison City Of Landfill IS ALSO A SUPERFUND POLLUTED SITE WHICH IS ALSO A LIE! Wj Smith Wood Preserving Co 1700 W Morton St, Denison, TX 75020 IS ANOTHER SUPERFUND SITE CLAIMED TO BE CLEANED UP BUT THAT IS A LIE. The company used creosote to treat wood and after 80 years in business, they shut down in 1991, leaving the land so contaminated nothing else could go there. NOW THEY WANT TO BUILD RESIDENTIAL HOMES ON THAT CANCEROUS PLOT OF LAND! AGAIN! DO NOT ALLOW THE BM DORCHESTER CEMENT PLANT TO BE BUILT!

COMMENTS: Everything I've seen points to the cement plant having a negative impact on our community and surrounding areas. The environmental impact will be large and it will greatly disrupt the lives of many in the adjacent Dorchester community. I'd like to learn more, but so far, I am adamantly opposed to this project. I've seen no positive indicators, whatsoever.

COMMENTS: Our church is located just a few hundred feet from the proposed location. This would not only be a terrible eyesore for the town of Dorchester and surrounding towns, like Howe ISD schools, it would cause noise pollution, road damage and an unbearable amount of dust. We do not want this in our county or town. I saw a kiln while on vacation in Wyoming. There was nothing, not one house, around it as far as the eye could see - and in Wyoming, the eye can see for hundreds of miles. Dorchester and the surrounding area is a growing area. There are houses and farms all around the proposed location. There are master planned communities going up just a couple of miles away. Find a less populated area for the kiln. We don't want you here.

COMMENTS: I am 75 years old and have lived here 41 years. It is a dead end road off of Hwy 289. I have COPD and am on oxygen 24/7. We love it here because we are away from most of the outside elements. I don't know what we would do if I couldn't go outside and sit on my porch and read or watch the neighbors' children play. We need help on things like this. Please remember most of us built our houses here and we love it here, PLEASE don't take that away. Judy Robison

FEB 27 2023

By 105
gaw

To some this may concern:
at the Quality Chief Clerk me -

My name is Judy Robison and I am writing
About the cement plant that is trying to
get the permints To build in Dorchester, TX
I live at 303 Primrose LN, Sherman, TX
75092. I am so. of 902 and ~~was~~ east of
Rd 289. I am on oxygen 24/7 hrs a day.

I am afraid that the fumes from that
plant may make my breathing worse I am
a widow as my husband Douglas Robison passed
away March 17, 2023. I do not wish to move
but I would have too if the fumes come this
way. I can't do much but I love to sit out
on my porch doing warm weather. This letter
may not mean much to the people building the
New Plant. But it could change my life.
I am 77 years old. My phone # 903-893
2931.

Thank you for Reading My Lettee

Judy Robison Feb. 19, 2024

COMMENTS: Dear Members of the TCEQ Board. I am writing to express my deepest concerns regarding the application submitted by BM Dorchester LLC for the operation of a cement kiln in Dorchester, TX. As a resident of Gunter who is 5 miles to the south of the proposed project the pollution that will be generated ie Sulfuric Acid, Lead, Particulate Matter etc. will cause great harm to our water sources. This will cause health issues with our community and our livestock. I worked in semiconductor industry for 40 years and I can assure you that the blasting that will have a major impact on the equipment that makes semiconductors and cause scrap. I urge the TEQC to thoroughly consider the potential health and well-being of the residents and the surrounding areas. I ask you to take into account the voices of residents and to ensure that any decision made regarding these application is in the best interest of the publics overal well being.

COMMENTS: The current number of large semi trucks and vehicle activity on FM 902 has us questioning staying in the community. This plant will drastically add to the problem on FM 902 in Dorchester where we live. If this plant comes to town, we will be leaving the community. Traffic and large trucks are already overwhelming in front of our property, add the concern with air quality, noise, pollution, trucks... why would anyone stay in the area? Please say NO to this plant in Dorchester, Howe, or Sherman.

COMMENTS: We live just a couple of miles east of this potential plant. We are concerned for the people, the livestock, the crops, the run off into our water supplies and stock ponds that this plant will produce. This will pose health risks, from multiple issues this plant will produce (water and air pollution, etc) to our local citizens, live stock, as well as our employees.

COMMENTS: I am opposed to this permit, which, if approved, would adversely impact the entire community of Dorchester, Texas. A brief listing of concerns with this permit: • Air pollution (Dust, fuel and chemical) - increases health risks to all citizens, especially those with COPD, asthma, and other lung conditions • Noise pollution • 24-hour light pollution • Excessive draw on the water table – Dorchester currently supplies Sherman, Dorchester, Howe, and Gunter with water In addition to these environmental harms, approval of the application will damage local roads with heavy

industrial traffic and decrease property values of adjoining and adjacent properties. For these reasons, the permit should be denied.

COMMENTS: I and my family strongly object to the proposed limestone mine development in Grayson County in the Dorchester community. There are many reasons why this permit should be rejected. This limestone mine/cement plant would destroy the peaceful farming community and negatively affect the health and well being of its residents. Mining for the limestone would negatively affect the ground and surface water. Dorchester is the home for water wells that supply water to Sherman, Howe, Dorchester, and Gunter. There would be excessive noise pollution and air pollution.

There would be heavy industrial traffic on country and neighborhood roads which would be very dangerous. Property values in the area would be greatly reduced and many of the properties in the area have been in the area for generations. Some families are already planning to move out of the area if the limestone mining plant gets a permit because of the very harmful effect it will have. My family has been in the Dorchester area since the early 1900's and my grandparents were the Taylors for which Taylor Road near Dorchester is named. I want to see the community of Dorchester thriving--not destroyed.

To Whom it May Concern:

This letter is to address the construction of the Black Mountain Limestone Mining Kiln. I understand that the company plans to construct a facility in Dorchester, Texas behind the First Baptist Church. As you are certainly aware, not only will this adversely affect the health of those in the Dorchester area, it will spread toxic airborne particulates to at least a 50 mile radius. Additionally, our property values will plummet, halting an otherwise optimistic future for the community of Dorchester, as well as its families, businesses, farms, and property owners.

Speaking personally, my wife grew up in the community of Dorchester, and we were planning to build a new home and retire on her parents' property, located approximately one mile northwest of the proposed site. We inherited a mobile home park on the same property that was in a disastrous state at which we have worked very hard and invested a lot of money, hoping to reform a business to hand down to our children. All of these dreams, funds, and hard work will be completely lost if this facility is constructed.

My specific concerns are as follows:

When BMD (Black Mountain Dorchester) applied for their permits, they omitted vital information and/or gave false information on the application. The following items, at least, should be thoroughly investigated.

1. There is a blatant noncompliance with bilingual requirements on their signage. All surrounding school districts meet the requirements of bilingual programs in their elementary and middle schools. Therefore, the signage posted by BMD should have been in both English and Spanish. It is not.
2. First Baptist Church of Dorchester has a chartered school within 3,000 feet of the proposed sight. This was omitted in the permit application.
3. BMD does not recognize the Dorchester Airport (TXAerosport Aerodrome) and therefore does not include it in their application.
4. BMD claims that they are not within 100 Km of the Oklahoma state line. This is false; the proposed sight is approximately 48 Km from the state line.
5. BMD claims that a Disaster Review is not necessary. However, since the plant will be storing and using NH₃ (a type of ammonia) they are required to include a Disaster Review. I am confused as to how these items were not investigated more thoroughly.

I also ask that the following concerns be addressed regarding the PSD Permit application:

1. Hagerman National Wildlife Refuge is located only a few miles north of the proposed site. Although it is not currently designated as a Title 1 property, it meets all of the requirements of such, and will likely be named as a Title 1 soon.
2. There is no written plan for the contamination of the Choctaw and Trinity watershed systems.
3. There is not an acceptable detailed plan to utilize equipment that is truly BACT that produces a maximum reduction of all pollution and emissions.
4. BMD has failed to produce a study of the local limestone including an expulsion test showing what organic compounds and pollutants will be generated from the daily operation of the kiln.
5. On the permit application, Black Mountain claims that this plant will not result in an increase of additional heavy industry businesses, including concrete plants. This claim is most likely false. These industries will likely come in to support the machinery, need for materials, supplies, etc, that the plant will require for operation, as well as to utilize the product from the plant to supply a concrete plant. In short, this plant will create a demand, and other unwanted business will come in to supply that demand.
6. Currently Black Mountain is utilizing the meteorological data from the Denton Regional Airport study. The property for the plant is 180 feet higher than the Denton Airport. The wind conditions at the plant construction site are significantly different (higher speed and greater sustained winds) than they are at Denton Regional Airport. Therefore a new study should be required from a third party that is conducted from the proposed site, since it is one of the highest locations in the county.
7. The property surface roughness currently falls under the "Low Range" category. The construction of the plant will change the terrain so that it will fall under the "Medium Range" category. As you are aware, this will cause the passing air currents to be more turbulent. This will affect the airport, as well as causing the air currents to pick up more of the pollution from the plant and carry the emissions from the plant to the downwind areas. This result is vastly different from the impact prediction that Black Mountain submitted included in their permit application.

To conclude, BMD has been given far too much latitude for a full three years, when there are significant indications that they have withheld information in some cases, and outright falsified information in other cases. Please investigate ALL parts of the application, and you will come to the conclusion that this permit MUST be denied.

Thank you for your time and consideration in this matter.

Sincerely,

Russ Rutherford
Property and Business Owner
Dorchester, TX

COMMENTS: I am not in support of the concrete plant being put in Dorchester. I'm a lifelong resident of Grayson County, and have experienced the south winds bring odors from the sewage treatment plant and the old Folger's plant from south Sherman into the city. This leads me to believe that the dust and pollution from a concrete plant in Dorchester would be brought to our city regularly and negatively impact the quality of life for its residents. I also believe it will have a negative effect on the economic development and growth of our community.

COMMENTS: This is not good for our community! Decreased quality of country living • Health risks to all citizens – Do you know any one with Asthma or breathing conditions? • Excessive noise pollution • Decreased property values • 24-hour a day lighting pollution • Air pollution – Dust, fuel and chemicals including sulfuric acid, nitrogen oxides, and carbon monoxide • Excessive draw on the water table – Dorchester is currently home to wells that supply Sherman, Dorchester, Howe, and Gunter populations. With existing water concerns, this WILL affect our water supply! • Health risks to livestock and wildlife • Heavy industrial traffic on our neighborhood roads • Commercial traffic will never stop

COMMENTS: As a homeowner bordering this proposed monstrosity that will forever change the landscape and quality of life in Grayson County, allow me to share my concerns not only for the health and wellness of the citizens but for our livestock and wildlife as well. The runoff from this property flows directly to mine - where my livestock eats and drinks - And directly affects the Trinity River and Lake Lavon watersheds. Contamination not only of our air, but water is of grave concern to me. However, the boxes have not been checked and protocol has not been followed - As I was reviewing the application for permit, there are so many inaccuracies, mistruths, and deceptions. The fact that a weather station is Denton was used for this is 100% wrong. There is a substantial difference in the elevation of Denton to Dorchester and it is only right that a weather station be used that is closer in proximity and topography. Furthermore, the school district is not even right. I am employed by Howe ISD and yes, Spanish postings are required. Uphold the law TCEQ - Make BM follow the rules and do what is right.

COMMENTS: TCEQ do better. Accepting yet another app from Black Mountain that is full of errors, omissions, and outright lies sheds a dark dark light on your agency. My property, family, livestock, and way of life is located 30 feet from the property where this plant is slated. It does without saying that not only air quality, but water, land, noise, and general pollution would wreak from this plant. I demand a hearing and at that hearing all previous comments be noted in addition to the facts that there are still

major errors within the application. Oklahoma must be included. The school and airport must be taken into consideration. And, lastly, a indepth review must be conducted on the models that were used with inaccurate weather locations and data being used. Denton is too far and the land in question for the plant has a MUCH higher elevation. DO RIGHT TCEQ. Do right Texas. Don't pollute my home.

COMMENTS: I am concerned about the Dorchester water well system and the water table (aquifers) being lowered so much that we will lose our system. I am on this system and dependent on it for our life. All the water from Hwy 289 runs to the West, where I live on my farm 3 miles West and a branch of Range Creek runs thru my property. I am concerned about the runoff from this plant contaminating our ponds and Lake Roberts, due to the fact that the creek overflows during heavy rains and runs into our livestock ponds and on to Lake Roberts. If the plant goes in we will be living due

West of it in the path of the air being emitted from the plant when the wind is out of the East. Please do not let this happen to a good community in Grayson County.

COMMENTS: Upon reviewing the application for this permit, I am astounded to see the inaccurate information that is included. This alone should be enough to deny this permit. Wrong school district, no Spanish postings, homes omitted from the map, schools omitted from the map filed, and so many other things. Come on State of Texas- Do what is right. Don't be bought by big business who paid an extra \$20K to have this permit expedited. Furthermore, is it common for the lead on this case, Joel Stanford, to correct so many things on this for BM. I have emails stating where he "corrected this for you". I thought he worked for the State of Texas - Should he be correcting things for the private sector on applications? I think not. Do better TCEQ. Deny this permit for the almost 150,000 people of Grayson County who deserve quality of life.

COMMENTS: With the re-application of this app from Black Mountain for the Kiln Plant - Please consider the following - My home is 30 feet from the property line where this eye sore and detriment to our community is slated to be located. I am still in awe that the application is laden with errors. Using data from Denton Regional Airport is at a totally different elevation and it should be a non -negotiable that local weather data be used for the models. Quality of life for those of us who have made Dorchester their

home is dependent upon the State of Texas requiring accurate reporting and correct data for this proposed plant. Furthermore it is important to note that despite the political contributions made by the parent company of Black Mountain - Christi Craddock, Greg Abbott, and the other benefactors of these political donations by the High Roller Group should put the welfare of the citizens, their constituents, and our community ahead of any personal gain they may claim. Right is right. Wrong is wrong. Black Mountain Dorchester is wrong and not welcome in Dorchester. The facts that the app omits including the charter school at First Baptist Church, the airport, the grain elevator, and the fact the plant would be located well within the 100 km of Oklahoma are outright lies and omissions. Furthermore no disaster review is a tragedy in itself waiting to happen with the type of ammonia that would be used. Come on Texas. Do better for the citizens of Dorchester and the future of Grayson County. Quality of life, agricultural endeavors, and the future of our county and country depend upon it.

COMMENTS: I have lived in the Dorchester area all my life and the Frist Baptist Church Dorchester is my church. I am totally against the BM Dorchester project, the destruction of our quality of life this will bring. The pollution of air and water, traffic, change of country side. The value of homes and land will go down, the health, and quality of life for myself and my family and friends. I hope and pray this permit is not granted, because what makes the money that BM would make more important than the lives of the people in Grayson county and the counties around us.

COMMENTS: I'm writing to object to the planned kiln to be constructed in Dorchester, which would affect the health, safety, and livelihoods of the community that I grew up in and the residents of Grayson County. I've lived in Grayson County since I was three, and now as an independent, tax-paying, voting adult who is looking for a place to raise my own family, I'm distressed by the future of the region should this kiln come into place. Grayson County is a quickly growing area, and the kiln would affect the quality of life and the escape from the city-life DFW offers. Its nature, peace, and fine quality of water and air are all reasons that it has grown, and opening a kiln here would affect the thousands of residents and their families, only to harm them. The economic growth in the area is not necessary - the area doesn't lack new jobs or industries coming in. This kiln will only take away some of the strongest and most attractive parts of the area, and will be a disservice to the residents, environment, and economics. I write as a plea for the health of the residents and the Grayson County that I grew up in - one that is growing, is prospering, and that serves as a safe haven from the bustle and pollution of larger cities further south. Please find another location for your kiln - it is not wanted or advantageous here. Thank you, True Shaw

COMMENTS: I do not want this plant in our area. This plant will pollute our air quality with toxins. Not to mention they want to destroy another towns history by demolishing a church

COMMENTS: My husband & I have lived on State Hwy 289 for 14 years and just got our home paid for in 2019. We live approximately 2 miles from the Dorchester Baptist Church. We moved out here to enjoy the peace and quiet. We are on a fixed income with no retirement. If the Plant should come to this area, it would lower our property value so much that we could not afford to move elsewhere at our age. I have suffered from extensive allergies for 22 years which include chemical, dust, smells, etc. I cannot breath in that type of toxic environment. I cannot tolerate even the smell of a

burning fireplace if I walk outside. My husband has open heart surgery and cancer. The blasting would be a problem for heart patients and would be a total disruption of peace and tranquility. This will also affect the livestock and wildlife that is prevalent in this area. It will affect the water quality and supply provided by the wells in Dorchester. We have very good, healthy water. We would like for it to stay that way. It will affect the ground water, surface water, could cause sinkholes and flooding. We are on flat land and already have dealt with flooding. The traffic is so heavy now that we can hardly get into our driveway safely. This would double or triple the traffic to say the least! Semi loads of equipment and materials will destroy our roads and highways including FM 902, Hwy 289, and too many county roads to list. Our area, State Hwy 289, Dorchester, Gunter, and even Sherman, with the newly built High School will all be impacted! This area is finally growing as folks from the Metroplex are moving this way for a more tranquil lifestyle. This will kill our economy and force many families to move elsewhere. Many of us cannot afford to do that, especially if our property value suffers. The older ones do not want to move back in town and possibly go to a Senior Citizens low income housing. Please do not do this!!

COMMENTS: Please accept all comments under permit 167404 as also pertaining to this linked permit on TCEQ's information page. I would like to add that all significant deterioration factors are not being considered in this permit with the attachment listing areas of the application that are incorrect leading to a incorrect analysis and an invalid air modeling and impact study. The supporting documents to this attachment was also a large file and was overnighted to TCEQ and will be in the 167404 comments file as well if needed. The City of Dorchester strongly opposes this and would

take legal action prohibiting 24/7 operation and possibly any operation because of the close proximity and noise level to homes, a church, school, airport(that it will be invading airspace safety protocols per FAA), and lots that was platted residential long before the filing of this application that should be afforded the same protection as permits under the State Clean Air Act 382.05198. It also appears from the site plan that this facility does not meet the requirements of this section as equipment, stockpiles, and vehicles used at the plant may not meet the criteria of distance needed.

TCEQ PUBLIC MEETING COMMENTS

Federal project 335160, Permit Nos. 167404, PSDTX1602, GHGPSDTX212 and CN605952373 & RN111368437

1	a		In the application workbook, public notice Form PI-1, section C, there is a false answer considering if a bilingual program is required in the School District by the Texas Education Code.
			Posting on site was only in English for first posting and maximum 9 days of the 30 days required. Second posting is ongoing and again is not in Spanish.
		1,2,3,4	See Public Notice copy, TCEQ's Instructions for Public Notice, Form PI-1 Glossary, and past comments posted to TCEQ, and email that first posting was "sorted".
		5	See notice of rejection of proof of publication from February 29th, it is also a notice of Title VI violation after repeated notice to comments to TCEQ and not addressed.
1	b		In the application workbook, public notice Form PI-1, section D, there is a false answer considering if facilities are located within 100 km or less of an affected state or Class 1 area.
		1,2,3	See Public Notice copy, TCEQ's General Application Copies stating within 100 km of Tribal Lands or Oklahoma State border, and EPA 40 CFR 51.166(g).
1	c		Special consideration for Hagerman Wildlife Refuge that qualifies for a Type 1 land, but has not been designated. Pollutants will decrease waterfowl and bird, including bald eagles, successful laying and hatching rates.
		1,2	See Hagerman details and Type I requirements.
2	a		In the TCEQ General Application section IV, B it falsely states that there is not a school in 3,000 ft of the site boundary.
	b		In the TCEQ General Application section VI, all statements about maps, plots, and calculations are inaccurate because maps are not correct and section V is false on authorized to operate 8,760 hours per year.
	c		In the TCEQ General Application, workbook, and entire modeling is incorrect because all emissions applicable are not considered.
		1	See General Application for notes on incorrect answers.
		2	See maps for details on correct area classifications and see city ordinance for noise ordinance on operation times.
		3	See 40 CFR 51.166 for federal regulations governing requirements for air permits, including requirements for all emitting sources from the quarry, handling, and transporting to be included.
		4	See TCEQ facility operations description and flow chart that list the quarry as part of the operations, and incorrectly notes State (30 TAC), because this is a federal permit, that exempts a mine or quarry as a facility.
		5	See NAICS code definition for 327310 as listed on application, including quarry or mining.
		6	See memo from Heather Brister noting consideration should be made for impact of potential nuisance conditions on the close sensitive receptors.
			This section makes the complete air modeling, emissions, and all other pollutant data invalid in this whole application.
3			In the General Application, Summary and Technical pages, it shows a Disaster Review is not required.
		1	NH3 is a listed agent/ pollutant on facility grounds, Disaster Review should be done.
4			In the EMEW workbook, it is stated No on an Airport.
			This property borders an airport, and should not be able to construct a facility as modeled due to safety of height restrictions in such close proximities to an airport.
		1	See EMEW page and reference maps showing airport in section 2-2.
5			Challenge the answer of Yes to the company (including parent and subsidiary companies) having fewer than 100 employees.
		1	See General Application, Public notice page.
6			Is PM listed Primary, Condensable, or Filterable PM? Is PM considered that is fogged out of the air but dries and becomes airborne again when the wind changes direction?
7			What is determination of fuel source being locked in as natural gas, not just a modeling tool?
8			Challenge of a two or three sided shed to be able to have a 85% or above containment. What is done with the slurry from the foggers that collect a portion of the dust and pollutants?
9		1	See protection of Federal Funds and National Security letter sent to Federal and State public representatives and Agencies. It outlines errors and omissions from the application and the significant impact it can have to the area.
10		1	See Resolution from the City of Dorchester opposes all permits requested from the TCEQ, FAA, EPA, and other local, state, and federal governmental agencies.
11		1	Challenge of the statement in the PSD Additional Impact analysis, section 11.1 of Growth analysis is fictional. If a project of this type is in the area, it will bring other cement or concrete businesses to the area, along with heavy equipment support including fuel depots and traffic congestion that would multiply beyond this project.
12			Concerns for recently changed data on air emissions and changing of facility equipment, notice for extended time to have reviewed and modeled.

COMMENTS: This comment is in addition and supplement other comments. See attached.

I am here this evening with some additional questions or comments. I have received information that from an air engineering standpoint on the submitted application that the wrong surface roughness category has been used considering the facility, that the emissions on the study would not be in an acceptable range per PSD and NAACS. This does not consider the other bad data points used, such as being a major emitter, an on-site meteorological study should have been completed which should show at an elevation of around 180 ft greater than Denton, the difference in wind speed and consistency would change all data in your application and again be higher than allowed. If the haul road, raw material handling, and the blasting and quarry operations were included as legally required federally, this alone would also put it above required limits. With all three of these in the picture, it is unforeseeable this facility would ever be approved if the permit was considered with the correct data at this location.

Looking at the questionnaire part of the application, the incorrect answers of the school district, bilingual language requirement, charter school within 3,000 ft, incorrect maps, that current BACT was being used is incorrect, if you are within 100 km of Oklahoma,, I could go on but the slipshod work is apparent and this application is not complete or accurate, nor follows normal current practices for an air study according to some air engineers, much less an application that peoples health, livelihoods, businesses, and environmental impacts would ever considered by TCEQ personnel.

I was told the maps did not matter when I inquired lately about them continuously being incorrect, then corrected somewhat, then changed back for the latest submission of site maps. This facility should be miles from a town or business development. I ask would the TCEQ personnel be complicit if I set a Sulfuric Acid mister up outside their home?

Because of the location of this facility, the FDA would have to be contacted (for a Food Facility that is not on the map, that uses ambient air to aerate and condition the stored grain). FCC would be involved with the blocking of broadband internet signal that has been promoted by the federal government for rural areas. There would be probable legal claims each year of over 100,000,000 dollars, not just from the tech sector, but from the degradation of crops in the area, livestock, and agriculture production. The EPA would be requested because the PSD is falsely covering air events, but needed water pollution and plans would be required for Lake Texoma, the Trinity watershed, Choctaw watershed, and Hagerman Wildlife Refuge that would also bring in the US Fish and Wildlife Service. If that is not enough the FAA would have to consider the facility's danger to the airport next door because of a slope impediment. Since a dangerous level starts at a 20:1 slope, and this facility would be at an extremely dangerous 5 or 6:1 slope from the airport runway also blocking the view of pilots landing or taking off of flocks of birds leaving the settling and cooling ponds of the proposed kiln facility until too late to avoid. Last but not least is the Dorchester Noise ordinances that should prohibit 24-hour operation to protect the safety, health, and quiet enjoyment of our residents that are and will be located at such a close proximity.

The thought after all of this would have to lead to why? Have BM's engineers informed them of proper procedures that should be done for a major emitter and PSD and what the results would be? What would be the purpose of a construction permit be for a facility that would not pass for an actual title V permit if constructed. I would think answers would be to flip and sell the construction permit for someone else to have the end problems possibly? Would it be leverage for the company to know they have pressure, whether requested or not, for a payout not to construct from the area or tech industry? When does the TCEQ staff get involved and require the correct studies, information, and correct input for the PSD and air modeling to be done, to allow a correct application and review with proper data and studies?

I call for this application to be either withdrawn or denied.

COMMENTS: This is a supplemental comment. Please see attached.

This is a very small site for a cement plant. Most are thousands of acres. Fugitive dust will be an issue with a small area like this to contain.

Questions from the draft permit conditions.

Condition 18: For haul roads specifically and all other unpaved roads, there is no standard for dust control other than "compliance with rules and regulations." A 95% control efficiency should be mandated for all unpaved roads. This is a standard widely used in the mining industry and should be used here. Why was it not included?

Condition 27, Subpart B: All these conditions allow them to continue operating while they try to "contain" or repair a very dangerous leak. Ammonia leaks are dangerous to employees and neighbors alike. Why isn't "shut down the plant until you fix it" the mandated condition?

Condition 35: This is unclear. This condition states additional testing is required if 2% more production is achieved if the maximum production rate is not achieved in a previous emissions compliance test. 2% on what production basis? Hourly, daily? How can the 10% rule apply? If the previous test was at maximum production rate (if not, the 2% rule would apply) how can they be at 10% more without demonstrating they are willfully running out of compliance? Why isn't the maximum production rate set at whatever is demonstrated/achieved in the emissions compliance test? What is the maximum hourly production rate under this permit for testing purposes, as emissions testing runs are done in less than 24hr intervals?

Conditions 40,45,46, 47: Why does the Finish Mill Stack not have a PM CEMS or CPMS? This is a significant source of PM, and a single 6-minute daily visible emissions check is woefully inadequate. Why does the Finish Mill stack not have NOx and CO CEMS and enforceable limits when it has a natural gas fired hot gas generator? The Finish Mill should have enforceable limits for ammonia and mercury emissions. Cement plants often use synthetic gypsum which usually contain ammonia and mercury. This is a hazard in high enough concentrations and in the case of ammonia, a severe nuisance odor to those downwind. If not limits, then what about a prohibition on the use of synthetic gypsum?

What raw materials testing has been done to estimate your mercury and lead emissions? How far does the air modeling say you will spread these pollutants, and in which prevailing direction?

PM limits are not just about dust and respiratory issues. They are a proxy for non-volatile heavy metals. What analysis have you done for heavy metals other than mercury and lead? The community has a right to know, even if the total PM emissions are under the limits.

You propose no controls other than "good combustion practices" for Volatile Organic Compounds (VOCs) and Organic Hazardous Air Pollutants (O-HAPs). What will you do if you cannot comply with your 24ppm Total Hydrocarbon (THC) and 12ppm O-HAPs limits?

You have not permitted burning waste in this kiln, as most of the cement does today. Will you commit here right now to never pursue a permit for burning waste?

In your MSS analysis, you estimate 4 unscheduled kiln stops (Case 3) per year. Subtracting 3 weeks total for Case 1 and Case 2 planned maintenance, that yields a kiln Mean Time Between Failure (MTBF) of 2058 hours (49 weeks*168 hrs/4). The average preheater/precalciner kiln in the United States has a kiln MTBF of 250-300 hours. You are estimating you will be 7-8X better than everyone else. Where else in this application have you made such generous assumptions in estimating your emissions?

Surface Roughness: the applicant does not address (i.e., "take into account") how the plant's construction will affect local surface roughness. This project is being built at a greenfield site. The applicant used current land use and surface roughness characteristics to justify use of TCEQ meteorological data sets for Grayson County. Based on current land use, the

AERSURFACE preprocessor program calculated the area within 1km of the emission sources to be 0.082m, which falls into the “low” surface roughness category. However, as demonstrated by the Area Map in the PSD Air Quality Analysis, land use is currently pasture/undeveloped land with little or surface roughness features (trees, shrubs, structures, terrain features, etc). The analysis failed to consider how the plant’s construction, as well as operation of the onsite limestone quarry, will significantly alter the local surface roughness features within the same 1km of the emission sources after the full build out of the plant. Accounting for these changes in surface roughness could easily change the AERSURFACE result to $\geq 0.1\text{m}$, which would fall into the “medium” range. Such a result would require modeling the meteorological files associated with “medium” roughness. The demonstration should be sufficiently protective and robust to show no adverse air quality effects will occur from changes in surface roughness. Many of the results presented in the Air Quality Analysis dangerously encroach on PSD Increment and NAAQS standards. The analysis should be augmented to ensure the plant, once fully built, fully complies with these standards according to the surface characteristics that will exist post-construction. This likely means “medium” surface roughness should have been included in the analysis, and the worst-case chosen to demonstrate compliance with applicable standards.

Background concentrations (focusing on PM2.5):

PM2.5: Dallas Hinton (EPA Site Number 48-113-0069) was proposed in the PSD Modeling Protocol as the monitor for background concentrations (up through the 3rd revision to the document). However, a different monitor (Denton Airport South) was ultimately used for background concentrations in the Air Quality Analysis submittal. What is the explanation for the change, and where does the record reflect TCEQ approved of the applicant’s change to the protocol?

In the PSD Modeling Protocol (3rd Revision), the Dallas Hinton PM2.5 monitor chosen by the applicant was for the three-year period of 2019-2021. This period shows an annual background concentration of 8.6 ug/m^3 , which was compared to the existing PM2.5 annual standard of 12 ug/m^3 . However, on February 7, 2024 EPA lowered the PM2.5 annual NAAQS to 9 ug/m^3 . Comparing 8.6 ug/m^3 to the new 9 ug/m^3 standard shows only a 0.4 ug/m^3 differential between current air quality and the standard. The project’s annual PM2.5 impact is predicted to exceed 0.4 ug/m^3 .

Moreover, evaluating the latest 3-years of data available shows the PM2.5 annual average increased during 2021-2023 to 9.23 ug/m^3 , which shows a violation of the 2024 PM2.5 annual NAAQS. Table 1, below, presents an evaluation of the latest 3-year annual average concentrations for Dallas Hinton.

Table 2 presents this same information for Denton Airport South, which is the monitor presented in the Air Quality analysis. The 2021-2023 average is calculated to be 8.14 ug/m^3 , which also is dangerously close to the 9 ug/m^3 standard. According to the AQA, the Project’s predicted impact is 2.4 ug/m^3 . Adding this result to 8.14 ug/m^3 exceeds the 9 ug/m^3 standard.

Therefore, even use of this site shows the project would violate the 2024 PM2.5 annual standard.

The TCEQ should not authorize a project that, as proposed, can be shown that it will not demonstrate compliance with the new PM2.5 annual NAAQS standard. Please explain how the analysis demonstrates it will comply with the new NAAQS, and how the existing air quality can even support this project to begin with.

PM10: Similar to PM2.5, an alternate monitor (Convention Center) was used for PM10, when PM10 is also collected at the Dallas Hinton location. What is the explanation for an alternate monitor being proposed in the modeling protocol and used for PM10, when PM2.5 concentrations are available from the same monitor?

Additional Impacts / Haul Road Traffic: It is not clear from the AQA how raw materials will be delivered for production. Will there be an onsite quarry that will deliver the raw materials to the plant? If the site may eventually serve as a quarry to provide future raw materials, it should be addressed at this phase of the analysis; as, overlooking this step would be deemed "phased construction" thus circumvents the PSD permitting process for the site.

If off-site trucks will deliver the raw materials, this likely will result in significant increases in truck traffic and associated emissions. There does not appear to be haul road emissions associated with the truck traffic. Cement plants also can have substantial track-out of dust due to spillage on the roadways and/or road travel. Nor, does the additional impacts analysis address adverse air quality impacts from increased truck traffic. Roadways may have to be widened and turn lanes added to increase public and worker driver safety.

How quarry emissions of particulate matter (removal of topsoil, movement of overburden, potential blasting, etc) were included in the analysis, both directly and indirectly. A lot of overburden gets moved around. Blasting may occur, etc. The PSD Additional Impacts Analysis fails to mention or assess that activity, nor emission increases due to haul road traffic that may occur due to the project.

Would a truck wash be required for outbound cement tanker trucks to keep fugitive cement dust off local roads, buildings, and vehicles?

COMMENTS: This is an additional submission. See attached cover page of documents sent with additional questions. From the public meeting I would like to emphasize two questions. This application is also for a PSD permit which also requires a study and plan for water, air, and soil contamination. With TCEQ saying they were only considering air, this permit cannot be passed without the TCEQ taking all liability for any contamination for the life of the project. Approving a permit without considering the required parameters is a direct violation. I would also like to challenge and question how the TCEQ is attempting to use Texas Health Code in not including emissions from the quarry and haul road, when it is required by law, for TCEQ to have access to federal and PSD applications, to abide by Title 40 regulations directly directing the rules the state abides by.

TCEQ PUBLIC MEETING COMMENTS

Federal project 335160, Permit Nos. 167047, PSDTX1602, GHGPSDTX212 and CN605952373 & RN111368437

1	a		In the application workbook, public notice Form PI-1, section C, there is a false answer considering if a bilingual program is required in the School District by the Texas Education Code.
			Posting on site was only in English for first posting and maximum 9 days of the 30 days required. Second posting is ongoing and again is not in Spanish.
		1,2,3,4	See Public Notice copy, TCEQ's Instructions for Public Notice, Form PI-1 Glossary, and past comments posted to TCEQ, and email that first posting was "sorted".
		5	See notice of rejection of proof of publication from February 29th, it is also a notice of Title VI violation after repeated notice to comments to TCEQ and not addressed.
1	b		In the application workbook, public notice Form PI-1, section D, there is a false answer considering if facilities are located within 100 km or less of an affected state or Class 1 area.
		1,2,3	See Public Notice copy, TCEQ's General Application Copies stating within 100 km of Tribal Lands or Oklahoma State border, and EPA 40 CFR 51.166(g).
1	c		Special consideration for Hagerman Wildlife Refuge that qualifies for a Type 1 land, but has not been designated. Pollutants will decrease waterfowl and bird, including bald eagles, successful laying and hatching rates.
		1,2	See Hagerman details and Type I requirements.
2	a		In the TCEQ General Application section IV, B it falsely states that there is not a school in 3,000 ft of the site boundary.
	b		In the TCEQ General Application section VI, all statements about maps, plots, and calculations are inaccurate because maps are not correct and section V is false on authorized to operate 8,760 hours per year.
	c		In the TCEQ General Application, workbook, and entire modeling is incorrect because all emissions applicable are not considered.
		1	See General Application for notes on incorrect answers.
		2	See maps for details on correct area classifications and see city ordinance for noise ordinance on operation times.
		3	See 40 CFR 51.166 for federal regulations governing requirements for air permits, including requirements for all emitting sources from the quarry, handling, and transporting to be included.
		4	See TCEQ facility operations description and flow chart that list the quarry as part of the operations, and incorrectly notes State (30 TAC), because this is a federal permit, that exempts a mine or quarry as a facility.
		5	See NAICS code definition for 327310 as listed on application, including quarry or mining.
		6	See memo from Heather Brister noting consideration should be made for impact of potential nuisance conditions on the close sensitive receptors.
			This section makes the complete air modeling, emissions, and all other pollutant data invalid in this whole application.
3			In the General Application, Summary and Technical pages, it shows a Disaster Review is not required.
		1	NH3 is a listed agent/ pollutant on facility grounds, Disaster Review should be done.
4			In the EMEW workbook, it is stated No on an Airport.
			This property borders an airport, and should not be able to construct a facility as modeled due to safety of height restrictions in such close proximities to an airport.
		1	See EMEW page and reference maps showing airport in section 2-2.
5			Challenge the answer of Yes to the company (including parent and subsidiary companies) having fewer than 100 employees.
		1	See General Application, Public notice page.
6			Is PM listed Primary, Condensable, or Filterable PM? Is PM considered that is fogged out of the air but dries and becomes airborne again when the wind changes direction?
7			What is determination of fuel source being locked in as natural gas, not just a modeling tool?
8			Challenge of a two or three sided shed to be able to have a 85% or above containment. What is done with the slurry from the foggers that collect a portion of the dust and pollutants?
9		1	See protection of Federal Funds and National Security letter sent to Federal and State public representatives and Agencies. It outlines errors and omissions from the application and the significant impact it can have to the area.
10		1	See Resolution from the City of Dorchester opposes all permits requested from the TCEQ, FAA, EPA, and other local, state, and federal governmental agencies.

11		1	Challenge of the statement in the PSD Additional impact analysis, section 11.1 of Growth analysis is fictional. If a project of this type is in the area, it will bring other cement or concrete businesses to the area, along with heavy equipment support including fuel depots and traffic congestion that would multiply beyond this project.
12			Concerns for recently changed data on air emissions and changing of facility equipment, notice for extended time to have reviewed and modeled.
13			Stipulation in Construction Permit is Regenerative Thermal Oxidizer to be installed and maintained for BACT and close proximity of sensitive receptors.
14			Require sampling and analysis of organic compounds of limestone to be processed before application consideration is complete. This analysis should be released to the public for third party analysis to complete air modeling.
15			How many year reserve do you estimate to be on-site? Where is the contents of the rest of the 40 to 50 year supply to come from?
16			Monitors should be required as part of the permit, including haul road and raw material site, and should have a redundant setup.
17			Kiln Dust is Caustic, what is the flow of washdown/ runoff and cleanup of baghouse filters program to track and discard. This is necessary for a complete PSD permit consideration.
18			Meteorological data was taken from Pilot Point which elevation is approximately 150 ft lower than the proposed site. A MET Station study should be completed before any air dispersion study should be considered from applicant to have correct data. The higher elevation should show higher and more consistent wind levels.
19			Has expulsion test been done and what are the results?
20			For a complete PSD permit analysis and ability for any permit to be approved, the study of water pollution should be released since this is the head of both the Choctaw Watershed and Upper Trinity Watershed and impacts drinking water supplies.
21			Consideration if the facility can be constructed and operated with the close proximity to City limits, platted residential lots, Church, School, Airport, and residences. Noise ordinances and state statute would limit obtrusions to neighboring property owners at risk.

COMMENTS: City passed a Resolution against permitting proposed kiln and mining operations. See attached Resolution.

CITY OF DORCHESTER, TEXAS
RESOLUTION NO. 022

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF DORCHESTER, TEXAS, OPPOSING AIR QUALITY PERMIT 167047, PREVENTION OF SIGNIFICANT DETERIORATION (PSD) PERMIT PSDTX1602, GREENHOUSE GAS PREVENTION OF SIGNIFICANT DETERIORATION (GHGPSD) PERMIT GHGPSD/TX212, AND ALL OTHER PERMITS SUBMITTED TO THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY BY BM DORCHESTER, LLC, REGARDING THE CONSTRUCTION OF THE PROPOSED DORCHESTER CEMENT PRODUCTION PLANT (PRECALCINER KILN AND ASSOCIATED EQUIPMENT FACILITY) AND OPERATION OF PERMANENT ROCK AND CONCRETE CRUSHERS (QUARRY) AT A SITE EAST OF THE HIGHWAY 289 AND FM 902 INTERSECTION APPROXIMATELY .80 MILES, DIRECTLY NORTH OF FM 902 AFTER THE TAYLOR ROAD INTERSECTION; RECOGNIZING THE PUBLIC HEALTH, SAFETY, AND WELFARE IMPLICATIONS OF THE PROPOSED OPERATION; AND URGING THOROUGH REVIEW OF SAID APPLICATIONS.

WHEREAS, City Council of the City of Dorchester, Texas ("City Council") finds it to be in the public interest and necessary for the public health, safety, and welfare to announce and submit its concerns regarding potential nuisances resulting from a proposed use of land that the City Council believes is incompatible with surrounding uses and sound regional planning; and

WHEREAS, BM Dorchester, LLC, is seeking to build and operate a 600-acre cement production plant consisting of a precalciner kiln and associated equipment facility and permanent rock and concrete crushers (quarry) facility (collectively, the "Cement Plant") at a site east of the Highway 289 and FM 902 intersection approximately .80 miles directly north of FM 902 after the Taylor Road intersection; and

WHEREAS, a portion of the Cement Plant site is currently located within the jurisdictional boundaries of the City of Dorchester, with the remainder located within the City's extrajurisdictional jurisdiction; and

WHEREAS, BM Dorchester, LLC, has applied to the Texas Commission on Environmental Quality ("TCEQ") for the issuance of an Air Quality Permit 167047, a Prevention of Significant Deterioration (PSD) Permit PSDTX1602, and a Greenhouse Gas Prevention of Significant Deterioration (GHGPSD) Permit GHGPSD/TX212, regarding the construction and operation of the Cement Plant (collectively, the "Permits"); and

WHEREAS, TCEQ is seeking written comments about the permit applications, which the public may submit through TCEQ's website, though there is a deadline; and

WHEREAS, the City Council is concerned about the location of the proposed Cement Plant for reasons that include its compatibility with surrounding uses, such as the immediately adjacent church and school, the nearby airport, the nearby Sherman industrial park, and residential areas in close proximity to the proposed site; its impact on water quality due to the adjacency of the site to the Choctaw Watershed and Trinity Watershed and numerous public and private wells; and

WHEREAS, specifically, the proposed site is located in extremely close proximity to the Dorchester Baptist Church, commercial businesses, and residential properties, Dorchester Baptist Church is also home to a school (First Class North Texas) with 100 students that meet once per week for both indoor and outdoor activities. In fact, the place of worship and at least one residential property are both situated right on the boundary line of the site. In addition, an airport (TxAerosport Aerodrome) is located in close proximity to the site. As such, the proposed site does not comply with TCEQ's rules governing distance limitations; and

WHEREAS, the TCEQ's approval of the requested Permits will result in significant negative impacts to the health, safety, and welfare of citizens; water quality and availability; the watershed and floodplain; air quality; traffic flow; roadway safety; wildlife habitat; and property values within the City and its extraterritorial jurisdiction as well as Grayson County; and

WHEREAS, should the TCEQ approve the Permits and the Cement Plant begin operations, the monetary damages resulting from the significant negative impacts described above will exceed \$100,000,000. The City Council is prepared to fight to protect the health, safety, welfare, and property rights of its citizens, businesses, and other stakeholders, including through litigation against the TCEQ and Cement Plant, if necessary, and the City Council encourages others in the community to do the same; and

WHEREAS, City Council is also concerned about potential air, noise, blast, seismic waves and light pollution from the proposed Cement Plant and the nuisance conditions that could result from the operation. For example, seismic waves and other activity emanating from the Cement Plant could negatively affect sensitive landowners and users nearby, including high-technology manufacturers with multi-billion dollar production facilities in the area that are essential to our local, state and national economy; and

WHEREAS, the site for the proposed Cement Plant is located in the middle of a major and growing employment corridor, which includes jobs that are incentivized by the State of Texas and local jurisdictions; and

WHEREAS, City Council supports private property rights and the rights of property owners to develop their property as they wish so long as they do so in compliance with all federal, state, and local laws and regulations, and they do so in ways that do not negatively impact surrounding property owners or their uses and property values; and

WHEREAS, based upon the information and concerns stated above, City Council finds that its action in adopting this Resolution is in the public interest as to the public's health, safety,

and general welfare.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF DORCHESTER, GRAYSON COUNTY, TEXAS:

SECTION ONE. The City Council hereby states its opposition to the proposed Cement Plant and the Permits. Pursuant to this opposition, City Council requests the following:

1. That TCEQ, in reviewing the applications for the Permits, use its expertise and authority to protect the health, safety, and welfare of the citizens, property owners, and environment of the City and deny the Permits; and
2. That all operations at the proposed Cement Plant, including air and steam emissions, water usage and water protection, water run-off, increased traffic, seismic waves and other activity and other environmental effects be thoroughly reviewed for health, safety, and compatibility purposes; and
3. That the City's representatives in the Texas Legislature work with TCEQ to review requirements for air quality permits, water quality oversight, and other environmental protections in Texas, for Texans, and strengthen them as needed.

SECTION TWO. City Council hereby directs City staff and/or the mayor to submit written comments, including this Resolution, to TCEQ as evidence of the City's concerns. Such concerns may include the filing of these public comments with TCEQ, other state agencies, and the Texas Legislature along with seeking a contested case hearing or taking other appropriate actions.

SECTION THREE. City Council urges other local entities, to include the City of Sherman, Choctaw Watershed Water Improvement District, Trinity Watershed District, and Grayson County, to consider the pending action before TCEQ regarding the foregoing matters and to take steps to protect the public interest in accordance with their respective authority and missions.

SECTION FOUR. This Resolution shall become effective immediately.

[The remainder of this page intentionally left blank.]

DULY PASSED AND APPROVED BY THE CITY COUNCIL OF THE CITY OF
DORCHESTER, TEXAS on this 1st day of April, 2022.

David Smith, Mayor

COMMENTS: This comment does not replace any previous comment and allows for future comments. The City has received requests to start housing on residential lots already established on property bordering the proposed application land as referenced on an earlier comment. The platted lots were established before the application was submitted and the City requests that the application be terminated. These lots/houses are/will be closer than the allowed distance for crushers to operate.

3. Alternate Language Publication

In some cases, public notice in an alternate language is required. If an elementary or middle school nearest to the facility is in a school district required by the Texas Education Code to have a bilingual program, a bilingual notice will be required. If there is no bilingual program required in the school nearest the facility, but children who would normally attend those schools are eligible to attend bilingual programs elsewhere in the school district, the bilingual notice will also be required. If it is determined that alternate language notice is required, you are responsible for ensuring that the publication in the alternate language is complete and accurate in that language.

Is a bilingual program required by the Texas Education Code in the School District?	No
Are the children who attend either the elementary school or the middle school closest to your facility eligible to be enrolled in a bilingual program provided by the district?	No

4. PSD and Nonattainment Permits Only

Is this an application for emissions of GHGs, select either "Separate Public Notice" or Consolidated Public Notice". Note: Separate public notices requires a separate application.	Consolidated Public Notice
---	----------------------------

We must notify the applicable county judge and presiding officer when a PSD or Nonattainment permit or modification application is received. This information can be obtained at the link below:

<https://www.txdirectory.com>

Provide the information for the **County Judge** for the location where the facility is or will be located.

The Honorable:	Bill Magers
Mailing Address:	100 W. Houston
Address Line 2:	Suite 15
City:	Sherman
State:	Texas
ZIP Code:	75090

Provide the information for the **Presiding Officer(s)** of the municipality for this facility site. This is frequently the Mayor.

First Name:	David
Last Name:	Smith
Title:	Mayor
Mailing Address:	373 Main Street
Address Line 2:	
City:	Dorchester
State:	Texas
ZIP Code:	75459

Are the proposed facilities located within 100 km or less of an affected state or Class I Area?	No

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Instructions for Public Notice For New Source Review & Prevention of Significant Deterioration Air Permit

Notice of Application and Preliminary Decision

We have completed the technical review of your application and issued a preliminary decision. You must comply with the following instructions:

Review Notice

Included in the notice is all of the information which the commission believes is necessary to effectuate compliance with applicable public notice requirements. Please read it carefully and notify the Texas Commission on Environmental Quality (TCEQ) immediately if it contains any errors or omissions. You are responsible for ensuring the accuracy of all information published. You may not change the text of the notice without prior approval from the TCEQ.

Newspaper Notice

- You must publish the enclosed *Notice of Application and Preliminary Decision for an Air Quality Permit* within **33 calendar days** after the date this information was mailed to you (see date of letter). As part of the expedited permitting process, it is recommended that you publish immediately.
- You must publish the enclosed *Notice of Application and Preliminary Decision for an Air Quality Permit* at your expense, in the same newspaper(s) in which you published the *Notice of Receipt and Intent to Obtain Permit* for this application. The newspaper must be a newspaper that is of general circulation in the municipality where the facility is or will be located. If the facility is not located within a municipality, the newspaper must be of general circulation in the municipality nearest the location.
- You must publish this notice in one issue of any applicable newspaper.
- You will find two example notices enclosed in this package. *Example A* must be published in the "public notice" section of the newspaper. The phrase "Example A" is not required to be published. *Example B* must be published in the **same issue** of the newspaper as *Example A*; however, it must be published in a prominent location (other than the public notice section). *Example B* refers the public to the "public notice" section of the newspaper where *Example A* provides more information regarding the permit application.
- *Example B* must be a total of at least **6 column inches (standard advertising units)** with a height of at least **3 inches** and a horizontal dimension of **2 column widths**. If the newspaper chosen does not use standard advertising units for measurement, the notice must be at least **12 square inches** with the shortest side of at least **3 inches**.
- The bold text of the enclosed notice **must** be printed in the newspaper in a font style or size that distinguishes it from the rest of the notice (i.e., **bold**, *italics*). **Failure to do so may require re-notice.**

Alternative Language Notice

In certain circumstances, applicants for air permits must complete notice in alternative languages.

- Public notice rules require the applicant to determine whether a bilingual program is required at either the elementary or middle school nearest to the facility or proposed facility location. Bilingual education programs are determined on a district-wide basis. When students who are required to attend either school are eligible to be enrolled in a bilingual education program, some alternative language notice is required (newspaper notice).
- Since the school district, and not the schools, must provide the bilingual education program, these programs do not have to be located at the elementary or middle school nearest to the facility or proposed facility to trigger the alternative language notice requirement. If there are students who would normally attend the nearest schools eligible to be taught in a bilingual education program at a different location, alternative language notice is required.
- If triggered, publications of alternative language notices must be made in a newspaper or publication printed primarily in each language taught in the bilingual education program. The same newspaper(s) used for *Notice of Receipt and Intent to Obtain Permit* must be used for publication of the *Notice of Application and Preliminary Decision for an Air Quality Permit*. This notice is required if such a newspaper or publication exists in the municipality or the county where the facility is or will be located.
- The applicant must demonstrate a good faith effort to identify a newspaper or publication in the required language. If a newspaper or publication of general circulation published at least once a month in such language cannot be found, publishing in that language is not required, but signs must remain posted in the same location(s) utilized during the *Notice of Receipt of Intent to Obtain Permit (1st public notice)*.
- Publication in an alternative language section or insertion within an English language newspaper does not satisfy these requirements.
- The applicant has the burden to demonstrate compliance with these requirements. You must fill out the **Public Notice Verification Form (Form TCEQ-20244)** indicating your compliance with the requirements regarding publication in an alternative language. **This form is available at www.tceq.texas.gov/permitting/air/nav/air_publicnotice.html.**
- It is suggested the applicant work with the local school district to do the following:
 - (a) determine if a bilingual program is required in the district;
 - (b) determine which language is required by the bilingual program;
 - (c) locate the nearest elementary and middle schools; and
 - (d) determine if any students attending either school are entitled to be enrolled in a bilingual educational program.
- **If you determine that you must meet the alternative language notice requirements after receipt of the full public notice package, you are responsible for ensuring that the publication in the alternative language is complete and accurate in that language. Spanish notice templates are available through the Air Permits Division Web site at www.tceq.texas.gov/permitting/air/nav/air_publicnotice.html. All italic notes should be replaced with the corresponding Spanish translations for the specific application and published in the alternative language publication. Email a copy to Air Permits Division staff.**
- If you are required to publish notice in a language other than Spanish, you must translate the entire public notice at your own expense.

Public Comment Period

- The public comment period will last at least **30 calendar days after publication of the last notice**.
- The comment period will be longer if the last day of the public comment period ends on a weekend or a holiday. In this case, the comment period will end on the next business day.
- The comment period for the permit may lengthen depending on whether a public meeting is held. If a public meeting is held, the comment period will be extended to the later of either the date of the public meeting or the end of the second notice period.

Proof of Publication

- Check each publication to ensure that the articles were accurately published. If a notice was not published correctly you may be required to republish.
- For each newspaper in which you published, you must submit proof of publication that shows the notice, the date of publication, and the name of the newspaper to the Office of the Chief Clerk within **10 business days** after the date of publication. Acceptable proofs of publication are 1) copies of the published notice or 2) the newspaper clippings of the published notice. If you choose to submit copies of the published notice to the Office of the Chief Clerk, copies must be on standard-size 8½" x 11" paper and must show the actual size of the published notice (do not reduce the image when making copies). Published notices longer than 11" must be copied onto multiple 8½" x 11" pages. Please note, submitting a copy of your published notice could result in faster processing of your application. It is recommended that you maintain newspaper clippings or tear sheets of the notice for your records.
- You must submit an **affidavit of publication for air permitting and alternate language affidavit of publication for air permitting (if applicable)** to the Office of the Chief Clerk within **30 calendar days** after the date of publication. **You must use the enclosed affidavits of publication.** The affidavits must clearly identify the applicant's name and permit number. You are encouraged to submit the affidavit with the proof of publication described above.
- You must submit the **Public Notice Verification Form (Form TCEQ-20244)** to the Office of the Chief Clerk within **10 business days** of the end of this public comment period. You must use this form to certify that you have met alternative language notice requirements. **This form is available at www.tceq.texas.gov/permitting/air/nav/air_publicnotice.html.**
- The **affidavits of publication, Public Notice Verification Form, and acceptable proof of publication of the published notices** should be emailed to PROOFS@tceq.texas.gov or mailed to:

Texas Commission on Environmental Quality
Office of the Chief Clerk, MC-105
Attn: Notice Team / AIR Expedited Permitting
P.O. Box 13087
Austin, Texas 78711-3087

- Please ensure that the affidavit(s) you send to the Chief Clerk have all blanks filled in correctly.
- Photocopies of newspaper clippings, affidavits, and verifications must also be sent to those listed on the enclosed *Notification List* within the deadlines specified above.

Failure to Publish and Submit Proof of Publication

You must meet all publication requirements. **If you fail to publish the notice or submit proof of publication on time**, the TCEQ may suspend further processing on your application or take other actions.

Sign Posting

HAZ

It is recommended that the signs that were put in place prior to publication of the first notice remain in place and be legible and visible until 30 days after publication of the *Notice of Application and Preliminary Decision* (either English or alternative language notice, whichever is later).

Application in a Public Place

- You must provide a copy of the complete application, the executive director's preliminary decision (including the draft permit), the executive director's preliminary determination summary and the executive director's air quality analysis, (including any subsequent revisions), at a public place for review and copying by the public. This place must be in the county in which the facility is located or proposed to be located.
- A public place is one that is publicly owned or operated (ex: libraries, county courthouses, or city halls). Location selected must provide public access to the internet.
- This copy must be accessible to the public for review and copying. The copy must be available beginning on the first day of newspaper publication and remain in place until the commission has taken action on the application or the commission refers issues to the State Office of Administrative Hearings.
- If the application is submitted to the TCEQ with information marked as "CONFIDENTIAL," you are required to indicate which specific portions of the application are not being made available to the public. These portions of the application must be accompanied with the following statement: "Any request for portions of this application that are marked as confidential must be submitted in writing, pursuant to the Public Information Act, to the Texas Commission on Environmental Quality, Public Information Coordinator, MC-197, P.O. Box 13087, Austin, Texas 78711-3087."
- You must submit verification of file availability using the **Public Notice Verification Form (Form TCEQ-20244)** within **10 business days** after end of the publications' designated comment period. Do not submit the form verifying that the application was in a public place until after the comment period is complete. If a public meeting is held or second notice is required causing the public comment period to be extended, at a later date you will be required to verify that the application was in a public place during the entire public comment period. **This form is available at www.tceq.texas.gov/permitting/air/nav/air_publicnotice.html.**

General Information

When contacting the Commission regarding this application, please refer to the permit number at the top of the *Notice of Application and Preliminary Decision*.

If you have questions or need assistance regarding publication requirements, please contact the Office of the Chief Clerk at (512) 239-3300 or the project reviewer listed in the cover letter.

Texas Commission on Environmental Quality
Form PI-1 General Application
Glossary

Date: _____
 Permit #: _____
 Company: _____

Bilingual Program	If an elementary or middle school nearest to the facility is in a school district required by the Texas Education Code to have a bilingual program, a bilingual notice will be required. If there is no bilingual program required in the school nearest the facility, but children who would normally attend those schools are eligible to attend bilingual programs elsewhere in the school district, the bilingual notice will also be required.
Concrete Batch Plant	All applications for concrete batch plants must complete Section IID, regardless of public notice applicability.

Sheet: BACT

Heading:	Description:
FINs	This tab will automatically populate with the FINs entered on the "Unit Types - Emission Rates" sheet.
Unit Type	This column will automatically populate with the unit type listed for that FIN in the "Unit Types - Emission Rates" tab.
Pollutant	This column will automatically populate with the pollutants listed for that FIN in the "Unit Types - Emission Rates" tab, up to 13 pollutants. The last row under each FIN and unit type is marked "MSS" for Maintenance, Startup, and Shutdown operations.
Tier I BACT	BACT is an emission limitation based on the maximum degree of reduction of each pollutant subject to regulation under the FCAA emitted from or which results from any proposed stationary source. The TCEQ has established Tier I BACT requirements for a number of industry types. The established Tier I requirements will automatically populate for the listed unit type. If one is not listed, or more detail is needed, follow the prompt to add additional detail in the "Additional Notes" column.
Confirm	Confirm that you have read and agree to comply with each Tier I BACT requirement by entering or selecting "Yes."
Additional Notes: Enter additional information, if needed	Additional information may be required to clarify the Tier I BACT requirements. Additional analysis is also required for Tier II, Tier III, and LAER proposals.

Sheet: Monitoring

Heading:	Description:
EPN	This column is an automatically compiled list of all EPNs that are new, modified, or consolidated as identified on the "Unit Type-Emission Rates" sheet. This is the primary identifier for each unit type in this sheet.
Unit Type	This column will automatically populate with the unit type listed for that FIN in the "Unit Types - Emission Rates" tab.
Pollutant	This column will automatically populate with the pollutants listed for that EPN in the "Unit Types - Emission Rates" sheet, up to 13 pollutants.
Minimum Monitoring Requirements	Permits must contain adequate monitoring and recordkeeping requirements to demonstrate compliance with the emissions rates for each pollutant emitted from each EPN. This column will automatically populate with the minimum required monitoring for the listed unit type. If one is not listed, or more detail is needed, follow the prompt to add additional detail in the "Additional Notes" column.
Confirm	Confirm that you have read and agree to comply with each minimum monitoring requirement by entering or selecting "Yes."
Additional Notes	Describe the methodology of determining facility-specific requirements for the operational limits placed on this facility. Be specific to the EPN/FIN and pollutant listed.

Date: Jan 31, 2024 at 9:12:50 AM
To: City cityofdorchester@yahoo.com

That is correct on the second public comment period! The second notice will also announce the meeting within the body of the text. They did actually eventually get their first notice done correctly. There were some issues with the local paper as well as with people stealing their sign, but it was eventually sorted.

Regards,

Joel Stanford

Subject: Re: BM Dorchester Application Updates

Am I remembering correctly they will have to post and there will be another public comment period before the contested case hearing. Asking because they never posted correctly the first time.

Thanks,
David

FYI: Here's the public meeting information for this permit application.

The Public Meeting is to be held:

Monday, March 25, 2024 at 7:00 PM

01566
1/31/24

RESPONSE TO: PUBLIC NOTICE REQUIREMENTS – PROOF OF PUBLICATION AND AFFIDAVIT FORM

RECEIVED February 29, 2024

This is a notice of rejection of the proper posting of the BM Dorchester LLC facility with Permit numbers: 167047 and PSDTX1602, TCEQ Project Number 335160, Customer Reference Number CN605952373, and Regulated Entity Reference Number RN111368437.

BM Dorchester is in violation of Title VI in the consideration of Civil Rights as the application rules and regulations read. BM Dorchester and TCEQ have been repeatedly informed of this violation from their first posting, which was never done by regulation, by comments to the application and emails since December of 2021. They have continued to have misleading and false answers on their application to hamper the efforts of the EPA and TCEQ in performing a true consideration on their permit. The site is included and surrounded by the requirement in needs of posting in a second language as the rules state, and now, after knowing this they continue to ignore the law in the second posting posing the discrimination the rules were enacted for. We ask for an immediate dismissal of this application not only because of this, but the following errors noted by simple reading of the application.

Attention to the posting of this Permit request is very concerning. It was posted a total of 9 days of the required 30 days on the major road frontage. This was reported and allowed, when others in the area were made to repost or facilitate arrangements to keep their signs posted; this is alarming and a direct violation of law. In a very quick glance at the application (the latest workbook supplement submitted) there are several major incorrect answers; such slipshod work is alarming.

In the Public Notice section, questions 90 & 91 are untrue on the bilingual statements, question 116 is not correct as affected states (Oklahoma) and I feel that affected lands by definition are that the Choctaw and Chickasha Nations needs to be notified also, and question 127 should be incorrect as the owners have been reported to own many companies in Texas well exceeding the questioned 100 employee threshold.

In the General Section, question 107 stating a school is not in the 3,000-foot area is untrue, question 154 about school and residences mapping, though included, is terribly incorrect, and questions 158 and 159 on all emission points included is untrue, thus making most of the application and all data (modeling protocol) invalid on a federal application for permit.

In the Tech Section; question 165 on off property MCRA appears to be incorrect, and question 168 on Disaster Review for site needs is untrue (anhydrous ammonia is a listed agent, possibly others).

The application has repeatedly used an inaccurate area map for its modeling protocols, even after being reported in the comments and constant changing of the modeling protocols to attempt to meet specifications on the erroneous shown land uses. There are residents on the north and north-east direction from the facility (none shown on the area map). On the south side, a School Site (part of the Church) not correctly identified, and residents, along with a great number of residential lots touching the facility property already filed and platted with the County before the Kiln application was filed, thus giving them the protection of building homes and having the residents safe.

Also on the south side of the Facility is an operating FAA Public General Aviation airport. The proximity of the Kiln, with the height (350 ft approx.) of the facility directly contradicts acceptable land uses (safety zone) around an airport as specified by the FAA of a 20:1 ratio down to a 5:1 ratio. The site plan also shows a cooling water

reservoir and a settling pond which are also not acceptable land uses in this proximity of an airport as specified by the FAA. This is also marked as "no" as an airport in the area on in the Electronic Modeling Evaluation Workbook on the application leading to the investigation of possible structures on site not being accomplished.

This application does not have a valid Air Study, Modeling Protocol, or accurate release of pollutants without taking local ordinances or Federal regulations into consideration. This, in short, is a mockery of any type of standard of rules or regulations to keep our environment or community safe.

Sincerely,

David Smith, Mayor
City of Dorchester

C. Alternate Language Publication

In some cases, public notice in an alternate language is required. If an elementary or middle school nearest to the facility is in a school district required by the Texas Education Code to have a bilingual program, a bilingual notice will be required. If there is no bilingual program required in the school nearest the facility, but children who would normally attend those schools are eligible to attend bilingual programs elsewhere in the school district, the bilingual notice will also be required. If it is determined that alternate language notice is required, you are responsible for ensuring that the publication in the alternate language is complete and accurate in that language.

Is a bilingual program required by the Texas Education Code in the School District?	No
Are the children who attend either the elementary school or the middle school closest to your facility eligible to be enrolled in a bilingual program provided by the district?	No

D. PSD and Nonattainment Permits Only

If this is an application for emissions of GHGs, select either "Separate Public Notice" or "Consolidated Public Notice". Note: Separate public notices requires a separate application.	Consolidated Public Notice
---	----------------------------

We must notify the applicable county judge and presiding officer when a PSD or Nonattainment permit or modification application is received. This information can be obtained at the link below:

<https://www.txdirectory.com>

Provide the information for the **County Judge** for the location where the facility is or will be located.

The Honorable:	Bill Magers
Mailing Address:	100 W. Houston
Address Line 2:	Suite 15
City:	Sherman
State:	Texas
ZIP Code:	75090

Provide the information for the **Presiding Officer(s)** of the municipality for this facility site. This is frequently the Mayor.

First Name:	David
Last Name:	Smith
Title:	Mayor
Mailing Address:	373 Main Street
Address Line 2:	
City:	Dorchester
State:	Texas
ZIP Code:	75459

Are the proposed facilities located within 100 km or less of an affected state or Class I Area?

No

Important Note: Region 6 office has requested that all applications, including any updates, submitted to EPA be provided in electronic format via email or as a readable media via CD, DVD, or flash drive by mail. Microsoft Word for text, Excel for spreadsheets, and searchable Adobe Acrobat (pdf) files are the preferred formats. Do not submit any compressed or zip files, or files with an ".exe" extension. Files that contain confidential information may be submitted by email or digital media, but those files must be sent as a separate file and clearly identified as confidential in the file name. Individual files larger than 10 megabytes cannot be submitted via email, and the total size of all attachments cannot exceed 25 megabytes per email. Larger files can be submitted to EPA through the FTP process which can be initiated by submitting an email requesting FTP transfer of large files. No hard copies should be submitted to EPA. Any application, including any updates, submitted via email should be submitted to EPA (email address below). Identify the associated permit number when submitting information. Contact Ms. Aimee Wilson (email address below) at (214) 665-7596 if you need to submit large files via FTP or have any questions pertaining to electronic submittals to the EPA.

(d) The concentration permitted under the national primary ambient air quality standard, whichever concentration is lowest for the pollutant for a period of exposure.

(e) **Restrictions on area classifications.** The plan shall provide that—

- (1) All of the following areas which were in existence on August 7, 1977, shall be Class I areas and may not be redesignated:
 - (i) International parks,
 - (ii) National wilderness areas which exceed 5,000 acres in size,
 - (iii) National memorial parks which exceed 5,000 acres in size, and
 - (iv) National parks which exceed 6,000 acres in size.
- (2) Areas which were redesignated as Class I under regulations promulgated before August 7, 1977, shall remain Class I, but may be redesignated as provided in this section.
- (3) Any other area, unless otherwise specified in the legislation creating such an area, is initially designated Class II, but may be redesignated as provided in this section.
- (4) The following areas may be redesignated only as Class I or II:
 - (i) An area which as of August 7, 1977, exceeded 10,000 acres in size and was a national monument, a national primitive area, a national preserve, a national recreational area, a national wild and scenic river, a national wildlife refuge, a national lakeshore or seashore; and
 - (ii) A national park or national wilderness area established after August 7, 1977, which exceeds 10,000 acres in size.

(f) **Exclusions from increment consumption.**

- (1) The plan may provide that the following concentrations shall be excluded in determining compliance with a maximum allowable increase:
 - (i) Concentrations attributable to the increase in emissions from stationary sources which have converted from the use of petroleum products, natural gas, or both, by reason of an order in effect under section 2 (a) and (b) of the Energy Supply and Environmental

Texas Commission on Environmental Quality
Form PI-1 General Application
General

Date: October 2023
 Permit #: 167047
 Company: BM Dorchester LLC

If required to obtain a SOP or GOP , list all associated permit number(s). If no associated permit number has been assigned yet, enter "TBD":	TBD
---	-----

IV. Facility Location and General Information

A. Location

County: Enter the county where the facility is physically located.	Grayson
TCEQ Region	Region 4
County attainment status as of Sept. 23, 2019	attainment or unclassified for all pollutants
Street Address:	
City: If the address is not located in a city, then enter the city or town closest to the facility, even if it is not in the same county as the facility.	Dorchester
ZIP Code: Include the ZIP Code of the physical facility site, not the ZIP Code of the applicant's mailing address.	75459
Site Location Description: If there is no street address, provide written driving directions to the site. Identify the location by distance and direction from well-known landmarks such as major highway intersections.	From the intersection of highway 289 and Farm to Market (FM) 902 east of Dorchester, Texas, head east on FM 902 for approximately 0.80 miles. The Dorchester Plant site will be located directly north of FM 902 after the intersection of Taylor Rd.
Use USGS maps, county maps prepared by the Texas Department of Transportation, or an online software application such as Google Earth to find the latitude and longitude.	
Latitude (in degrees, minutes, and nearest second (DDD:MM:SS)) for the street address or the destination point of the driving directions. Latitude is the angular distance of a location north of the equator and will always be between 25 and 37 degrees north (N) in Texas.	33:32:17.43
Longitude (in degrees, minutes, and nearest second (DDD:MM:SS)) for the street address or the destination point of the driving directions. Longitude is the angular distance of a location west of the prime meridian and will always be between 93 and 107 degrees west (W) in Texas.	96:41:22.67
Is this a project for a lead smelter, concrete crushing facility, and/or a hazardous waste management facility?	No

B. General Information

Site Name:	Dorchester Plant
Area Name: Must indicate the general type of operation, process, equipment or facility. Include numerical designations, if appropriate. Examples are Sulfuric Acid Plant and No. 5 Steam Boiler. Vague names such as Chemical Plant are not acceptable.	Preheater / Precalciner kiln line and associated equipment
Are there any schools located within 3,000 feet of the site boundary?	No

C. Portable Facility

Permanent or portable facility?	Permanent

D. Industry Type

Principal Company Product/Business:	Portland Cement Production

State Representative: Reggie Smith

District: 62

V. Project Information

A. Description

Provide a **brief** description of the project that is requested (describe the what, not the how and why). Limited to 500 characters.

Black Mountain Dorchester LLC is proposing to construct a greenfield portland cement production plant that will be located in Dorchester, Texas.

B. Project Timing

Authorization must be obtained for many projects before beginning construction. Construction is broadly interpreted as anything other than site clearance or site preparation. Enter the date as "Month Date, Year" (e.g. July 4, 1776).

Projected Start of Construction: August 1, 2022

Projected Start of Operation: August 1, 2023

C. Enforcement Projects

Is this application in response to, or related to, an agency investigation, notice of violation, or enforcement action?

No

D. Operating Schedule

Will sources in this project be authorized to operate 8760 hours per year?

Yes

VI. Application Materials

All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. (30 TAC § 116.116)

A. Confidential Application Materials

Is confidential information submitted with this application?

No

B. Is the Core Data Form (Form 10400) attached (link to the form below)?

Yes

<https://www.tceq.texas.gov/assets/public/permitting/centralregistry/10400.docx>

C. Is a current area map attached?

Yes

No
2-1 Not Accurate

Texas Commission on Environmental Quality
Form PI-1 General Application
General

Date: October 2023
 Permit #: 167047
 Company: BM Dorchester LLC

Is the area map a current map with a true north arrow, an accurate graduated scale, the entire plant property, the location of the property relative to prominent geographical features including, but not limited to, highways, roads, streams, and significant landmarks such as buildings, residences, schools, parks, hospitals, day care centers, and churches?	Yes	<i>Not Accurate</i>
Does the map show a 3,000-foot radius from the property boundary?	Yes	
D. Is a plot plan attached?	Yes	
Does your plot plan clearly show a north arrow, an accurate scale, all property lines, all emission points, buildings, tanks, process vessels, other process equipment, and two bench mark locations?	Yes	<i>← No PSD</i>
Does your plot plan identify all emission points on the affected property, including all emission points authorized by other air authorizations, construction permits, PBRs, special permits, and standard permits?	Yes	<i>All emissions</i>
Did you include a table of emission points indicating the authorization type and authorization identifier, such as a permit number, registration number, or rule citation under which each emission point is currently authorized?	Yes	<i>Not Accurate</i>
E. Is a process flow diagram attached?	Yes	
Is the process flow diagram sufficiently descriptive so the permit reviewer can determine the raw materials to be used in the process; all major processing steps and major equipment items; individual emission points associated with each process step; the location and identification of all emission abatement devices; and the location and identification of all waste streams (including wastewater streams that may have associated air emissions)?	Yes	
F. Is a process description attached?	Yes	
Does the process description emphasize where the emissions are generated, why the emissions must be generated, what air pollution controls are used (including process design features that minimize emissions), and where the emissions enter the atmosphere?	Yes	
Does the process description also explain how the facility or facilities will be operating when the maximum possible emissions are produced?	Yes	
G. Is a detailed list of requested actions included in the application? This list can be included in the project description.	Yes	
H. Are detailed calculations attached? Calculations must be provided for each source with new or changing emission rates. For example, a new source, changing emission factors, decreasing emissions, consolidated sources, etc. Calculations do not need to be submitted for sources without any proposed emission rate changes. <i>Note: the preferred format is an electronic workbook (such as Excel) with all formulas viewable for review.</i>	Yes	<i>Not Accurate + Run Time + all emission sources</i>
Are emission rates and associated calculations for planned MSS facilities and related activities attached?	Yes	
I. Is a material balance (Table 2, Form 10155) attached?	Yes	
Table 2 (Form 10155), entitled Material Balance: A material balance representation may be required for all applications to confirm technical emissions information. Typically this is required for refining and chemical manufacturing processes involving reactions, separations, and blending. It may also be requested by the permit reviewer for other applications. Table 2 should represent the total material balance; that is, all streams into the system and all streams out. Additional sheets may be attached if necessary. Complex material balances may be presented on spreadsheets or indicated using process flow diagrams. All materials in the process should be addressed whether or not they directly result in the emission of an air contaminant. All production rates must be based on maximum operating conditions.		
J. Is a list of MSS activities attached?	Yes	
Are the MSS activities listed and discussed separately, each complete with the authorization mechanism or emission rates, frequency, duration, and supporting information if authorized by this permit?	Yes	
K. Is a discussion of state regulatory requirements attached, addressing 30 TAC Chapters 101, 111, 112, 113, 115, and 117?	Yes	
For all applicable chapters, does the discussion include how the facility will comply with the requirements of the chapter?	Yes	
For all not applicable chapters, does the discussion include why the chapter is not applicable?	Yes	
L. Are all other required tables, calculations, and descriptions attached?	Yes	

3. AREA MAP

The Dorchester Cement Plant is located in Grayson County, Texas. Figure 3-1 shows the location of the Dorchester Cement Plant and the surrounding land use within 3,000 feet. The area map below shows the fenceline, UTM coordinates on the horizontal and vertical axis, urban areas within the AOI, and location of the nearest non-industrial receptors. The fenceline is just inside the property line and is used as the ambient air boundary.

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF DORCHESTER, TEXAS, ESTABLISHING NOISE CONTROL WITHIN THE CITY OF DORCHESTER, TEXAS; REGULATING NOISE DISTURBANCES THAT ARE DETRIMENTAL TO LIFE OR HEALTH, OR THAT INTERFERE WITH THE ENJOYMENT OF PROPERTY OR THE PUBLIC PEACE AND COMFORT; DEFINING THOSE NOISES WHICH ARE UNLAWFUL; PROVIDING FOR EXEMPTIONS, VARIANCES AND APPEALS; PROVIDING A REQUIREMENT THAT CONTRACTS WITH THE CITY ARE CONDITIONED UPON COMPLIANCE WITH THIS ORDINANCE; PROVIDING A PENALTY CLAUSE, SAVINGS/REPEALING CLAUSE, SEVERABILITY CLAUSE AND AN EFFECTIVE DATE; AND PROVIDING FOR THE PUBLICATION OF THE CAPTION HEREOF.

WHEREAS, it is declared to be the policy of the City of Dorchester, Texas (the "City") to minimize exposure to the physiological and psychological harm of excessive noise and to protect, promote and preserve the public health, comfort, convenience, safety and welfare; and

WHEREAS, it is the intent of the City Council of the City of Dorchester, Texas ("City Council") to control the level of noise in a manner that promotes commerce, protects the sleep and repose of citizens and preserves the quality of life and the environment; and

WHEREAS, the City Council finds that noise pollution is a serious concern to all inhabitants of the community and that it is in the best interest of the citizens of the City to adopt this Ordinance.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF DORCHESTER, TEXAS:

SECTION 1: Purpose/Findings Incorporated. The purpose of this Ordinance is to make it unlawful for any person or entity to make, cause to be made or allow any unreasonably loud and disturbing noise of such a character, intensity and duration as to be detrimental or offensive to the ordinary sensibilities of the citizens of the City and/or which renders the enjoyment of life, health or property uncomfortable or interferes with the public peace and comfort. The findings set forth above are incorporated into the body of this Ordinance as if fully set forth herein.

SECTION 2: Compliance by Contractors and Proposed Developments. It is the policy of the City that all contractors and subcontractors be included as those required to comply with the provisions and intent of this Ordinance in their operations.

SECTION 3: City Contracts to be Conditioned on Compliance. Any written agreement, purchase order or instrument committing an expenditure of City funds in return for work, labor, services, supplies, equipment, materials or any combination of the foregoing shall be subject to the provisions of this Ordinance, and the person or entity entering into the contract

must operate, construct, conduct or manufacture its business without violating this Ordinance.

SECTION 4: Definitions.

- A. Construction – Any site preparation, assembly, erection, substantial repair, alteration or similar action (excluding demolition) of public or private right-of-way surfaces, structures, utilities or similar property.
- B. Demolition – Any dismantling, intentional destruction or removal of public or private right-of-way surfaces, structures, utilities or similar property.
- C. Device – Any mechanism that is intended to produce or that actually produces noise when operated or handled.
- D. Emergency Vehicle – A motor vehicle used in response to a public calamity or to protect persons or property from an imminent exposure to danger.
- E. Motor Vehicle – Any vehicle propelled by mechanical power, such as but not limited to, any passenger car, truck, truck-trailer, semi-trailer, camper, motorcycle, mini-bike, go-cart, dune buggy or racing vehicle.
- F. Noise Disturbance – Any sound that annoys or disturbs, or that causes or tends to cause, an adverse psychological or physiological effect on the sensibilities of a reasonable, prudent, adult person; any unreasonably loud or disturbing noise that is offensive to the sensibilities of a reasonable, prudent, adult person; or any unreasonably loud or disturbing noise that renders the enjoyment of life or property uncomfortable or interferes with public peace and comfort.
- G. Noise Disturbance Per Se – Not requiring extraneous evidence or support to establish the existence of a noise disturbance.
- H. Person – Any individual, firm, association, partnership, corporation or any other entity, public or private.
- I. Non-Residential District – Any district not classified by the City's Comprehensive Zoning Ordinance, as it exists or may be amended, as containing residential homes, apartments or condominiums.
- J. Power Equipment – Any motorized electric or fuel powered equipment, including but not limited to, tractors, lawnmowers and all other motorized electric or fuel-powered equipment.
- K. Powered Model Vehicle – Any self-propelled airborne, waterborne or landborne plane, vessel or vehicle that is not designed to carry persons, including but not limited to, any model airplane, boat, car or rocket.

- L. Property Boundary – An imaginary line exterior to any enclosed structure, at the ground surface and its vertical extension, that separates the real property owned by one person from that owned by another person.
- M. Quiet Zone – Property on which a school, hospital, clinic, library or other noise disturbance sensitive facility, as determined by the City, is operated.
- N. Residential District – Any district classified by the City's Comprehensive Zoning Ordinance, as it exists or may be amended, as containing residential homes, apartments or condominiums.
- O. Within Five Hundred Feet (500') of any Residence or Quiet Zone – The shorter of the following two (2) distances, measured in a direct line: (i) from the property line of the source of the subject noise disturbance nearest the property line of the subject residence or quiet zone to the aforementioned property line of the subject residence or quiet zone; or (ii) from the source of the subject noise disturbance to the property line of the subject residence or quiet zone.

All terminology used in this Ordinance and not specifically defined above shall retain its meaning in conformance with applicable publications of the American National Standards Institute (ANSI) or its successor body and/or the latest volume of Webster's Collegiate Dictionary.

SECTION 5: Specific Noise Disturbance Prohibited.

- A. No person shall allow, make or cause to be made any unreasonably loud or disturbing noise in the City that is offensive to the sensibilities of a reasonable, prudent, adult person; renders the enjoyment of life or property uncomfortable; interferes with public peace and comfort; or causes a noise disturbance as defined herein.
- B. The following list includes, but is not limited to, activities that can create unreasonably loud or disturbing noises in violation of this Ordinance, including activities which are noise disturbances per se, unless an exemption exists pursuant to Section 6 or a permit of variance was first obtained as provided in Section 7:
 - 1. Animals. Owning, keeping, possessing or harboring any animal or animals that, by frequent or habitual noise making, unreasonably disturbs or interferes with the peace, comfort or repose of the citizens of the City, or causes a noise disturbance as defined herein. The provisions of this Ordinance shall apply to all private or public facilities including any animal shelter or commercial kennel that holds or treats animals.
 - 2. Radios, television sets, musical instruments, loud speaking amplifiers and similar devices.

- a. The using, operating or permitting to be played, used or operated any sound production or reproduction device, radio, receiving set, musical instrument, drums, phonograph, television set, loudspeakers and sound amplifiers or other machine or device for the producing or reproducing of sound within a residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone, in such a manner as to cause a noise disturbance. Furthermore, any such activity shall create a noise disturbance per se if conducted between the hours of 10:00 p.m. and 7:00 a.m.
 - b. The using, operating or permitting to be played, used or operated any sound production or reproduction device, radio, receiving set, musical instrument, drums, phonograph, television set, loudspeakers and sound amplifiers or other machine or device for the producing or reproducing of sound within a non-residential area in such a manner as to cause a noise disturbance.
 - c. The using, operating or permitting to be played, used or operated any sound production or reproduction device, radio, receiving set, musical instrument, drums, phonograph, television set, loudspeakers and sound amplifiers or other machine or device that produces or reproduces sound for the purpose of attracting attention to any cause or demonstration, or to any performance, show, sale or display of merchandise so as to attract attention to such cause, demonstration or premises when such use is done in a manner which causes a noise disturbance.
 - d. The using, operating or permitting to be played, used or operated any sound production or reproduction device, radio, receiving set, musical instrument, drums, phonograph, television set, loudspeakers and sound amplifiers or other machine or device on trucks or other moving vehicles for the purpose of attracting attention to any cause or demonstration, or for advertising any show, sale or display of merchandise when such use is done in a manner which causes a noise disturbance.
3. Vehicular Sound Amplification Systems. Operating or controlling a motor vehicle in either a public or private place within the City and operating any sound device which is part of, or connected to, any radio, stereo receiver, compact disc player or other similar device in the motor vehicle, in such a manner that, when operated, it is audible at a distance of thirty feet (30'), or when operated, causes a person to be aware of the vibration accompanying the sound at a distance of thirty feet (30') from the source when such operation is done in a manner which causes a noise disturbance.

4. Yelling, Shouting, Etc. The yelling, shouting, crying, hooting, whistling or singing of peddlers, hawkers or any other person within the City in such a manner as to cause a noise disturbance.
5. Loading Operations. The loading or unloading of any vehicle within the City in such a manner as to cause a noise disturbance.
6. Construction/Maintenance Work.
 - a. Operating or permitting to be operated any equipment used in construction, maintenance, repair, alteration or demolition work on buildings, structures, streets, alleys, lawns, golf courses or appurtenances thereto and/or the erection, including excavation, demolition, alteration or repair of any building within a residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone, in such a manner as to cause a noise disturbance. Furthermore, any such activity shall create a noise disturbance per se if conducted between the hours of 10:00 p.m. and 7:00 a.m.
 - b. Operating or permitting to be operated any equipment used in construction, maintenance, repair, alteration or demolition work on buildings, structures, streets, alleys, lawns, golf courses or appurtenances thereto within a non-residential district in such a manner as to cause a noise disturbance.
7. Batch Plants.
 - a. Operating or permitting to be operated any gravel pit, rock crusher or other machinery, equipment and/or motor vehicle used for the separation, gathering, grading, loading or unloading of sand, rock or gravel and/or any other machinery, equipment and/or motor vehicle used in the production of concrete or asphalt, within a residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone, in such a manner as to cause a noise disturbance. Furthermore, any such activity shall create a noise disturbance per se if conducted between the hours of 10:00 p.m. and 7:00 a.m.
 - b. Operating or permitting to be operated any gravel pit, rock crusher or other machinery, equipment and/or motor vehicle used for the separation, gathering, grading, loading or unloading of sand, rock or gravel and/or any other machinery, equipment and/or motor vehicle used in the production of concrete or asphalt within a non-residential district in such a manner as to cause a noise

disturbance.

8. Power Equipment.

- a. Operating or permitting to be operated any power equipment (as defined herein and excluding construction equipment which is specifically regulated by Subsection 6 above) within a residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone, in such a manner as to cause a noise disturbance. Furthermore, any such activity shall create a noise disturbance per se if conducted between the hours of 10:00 p.m. and 7:00 a.m.
- b. Operating or permitting to be operated any power equipment (as defined herein and excluding construction equipment which is specifically regulated by Subsection 6 above) within a non-residential district in such a manner as to cause a noise disturbance.

9. Motor Vehicles – Repairs or Testing.

- a. The repairing, rebuilding, modifying or testing of any motor vehicle (including off-road vehicles) or watercraft within a residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone, in such a manner as to cause a noise disturbance. Furthermore, any such activity shall create a noise disturbance per se if conducted between the hours of 10:00 p.m. and 7:00 a.m.
- b. The repairing, rebuilding, modifying or testing of any motor vehicle (including off-road vehicles) or watercraft within a non-residential district in such a manner as to cause a noise disturbance.

10. Motor Vehicles – Running Loud or Out of Repair.

- a. The use of any automobile, motorcycle or other vehicle so out of repair, so modified, or so loaded, which emits or creates loud or unnecessary grading, grinding or rasping noise, the excessive spinning of the tires, or the racing of a motor vehicle engine unnecessarily within a residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone, in such a manner as to cause a noise disturbance. Furthermore, such activity shall create a noise disturbance per se if conducted between the hours of 10:00 p.m. and 7:00 a.m.

- b. The use of any automobile, motorcycle or other vehicle so out of repair, so modified, or so loaded, which emits or creates loud or unnecessary grading, grinding or rasping noise, the excessive spinning of the tires, or the racing of a motor vehicle engine unnecessarily within a non-residential district in such a manner as to cause a noise disturbance.
- 11. Motor Vehicles – Exhaust. The discharge into the open air of the exhaust of any motor vehicle in such a manner as to cause a noise disturbance, except as discharged through a muffler or other device which effectively and efficiently prevents loud and unusual noises and annoying smoke.
- 12. Impulsive Sources. Causing impulsive sound sources including, but not limited to, the use of fireworks, explosives, the firing of guns or other explosive devices within the City in such a manner as to cause a noise disturbance. This is not intended to preclude any existing ordinances prohibiting such acts.
- 13. Powered Model Mechanical Devices.
 - a. The flying of model aircraft powered by internal combustion engines, whether tethered or not, or the firing or operating of model rocket vehicles or other similar noise producing devices, within a residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone, in such a manner as to cause a noise disturbance. Furthermore, any such activity shall create a noise disturbance per se if conducted between the hours of 10:00 p.m. and 7:00 a.m.
 - b. The flying of model aircraft powered by internal combustion engines, whether tethered or not, or the firing or operating of model rocket vehicles or other similar noise producing devices within a non-residential district in such a manner as to cause a noise disturbance.
- 14. Refuse Compacting Vehicles. Operating or permitting to be operated any refuse compacting, processing or collection vehicle or parking lot sweeper in any residential district or quiet zone, or within five hundred feet (500') of any residence or quiet zone in such a manner as to cause a noise disturbance.
- 15. Quiet Zone. Creating a noise disturbance on any street adjacent to any school, hospital, clinic, library or other noise sensitive facility, as determined by the City.
- 16. Vibration. Using or causing the use of any device that creates any ground

vibration which is perceptible without instruments at any point on or beyond the property boundary of the source.

17. Stationary Non-Emergency Signaling Devices. Sounding or permitting the sounding of any electronically activated or amplified signal from any stationary bell, chime, siren, whistle or similar device, intended primarily for nonemergency purposes, from any place for more than five (5) minutes during any consecutive sixty (60) minute period which causes a noise disturbance. Except such signaling device is allowed if used as a danger signal and/or as required by law if vehicle is backing, starting or turning in such a way as to likely cause a collision.

SECTION 6: Exemptions. The following sources of potential noise disturbances shall be exempt from the regulations of this Ordinance:

- A. Emergency safety signals, storm warning sirens or horns and the testing of such equipment, emergency vehicle sirens or horns used when responding to an emergency, and emergency pressure relief valves.
- B. Sound caused in the performance of emergency or public service work, including police, fire and public utility operations, acting in the performance of lawful duties to protect the health, safety or welfare of the community.
- C. Sounds caused by natural phenomena.
- D. Activities conducted on public parks and playgrounds that are approved, sponsored or sanctioned by the City. Activities conducted on public or private school grounds including, but not limited to, school athletic and school entertainment events which are approved, sponsored or sanctioned by the school.

SECTION 7: Permits of Variance.

- A. The City Administrator, or his/her designated representative, is authorized to grant permits for relief of any provision in this Ordinance on the basis of undue hardship in cases where:
 1. The sound source will be of short duration and the activity cannot be conducted in a manner as to comply with this Ordinance;
 2. Additional time is necessary for the applicant to alter or modify their activity or operation to comply with this Ordinance; or
 3. No reasonable alternative is available to the applicant.
- B. An automatic variance will be granted without the payment of permit fees for the purpose of conducting parades or other public events provided that any noise

disturbance created by such activity will be abated when such request is made by the City Administrator, or his/her designated representative.

- C. The City Administrator, or his/her designated representative, may prescribe any reasonable conditions or requirements deemed necessary to minimize adverse effects and may suspend any permit issued for violating any provisions prescribed in the permit of variance.
- D. A fee of \$50.00 shall be charged to each applicant for processing permit applications.

SECTION 8: Appeals.

- A. Any applicant who has been denied a permit of variance or any permittee whose permit has been suspended shall have the right to a hearing before the City Council.
- B. Requests for a hearing shall be made in writing and received by the City Administrator, or his/her designated representative, within ten (10) days of the date of the denial or the date of the notice of the suspension. The City Administrator may review the appeal at a staff level and has the authority to reject the action of his/her designated representative and order that a permit be granted or to reinstate a suspended permit. However, should the City Administrator uphold the denial or suspension of a permit, he/she shall, or his/her designated representative shall, schedule a hearing before the City Council within thirty (30) days of receipt of the request.
- C. The City Council shall have the authority to review all pertinent files and information regarding the applicant/permittee which are in the custody of the City Administrator, or his/her designated representative. Additionally, the City Council shall have the authority to accept written and verbal testimony from the City Administrator, his/her designated representative, any appropriate City staff member, applicant/permittee and interested citizens. The City Council shall also have the authority to place time restrictions on the testimony to be given at the hearing.
- D. The City Council shall have the authority to assess whether the City Administrator, or his/her designated representative, acted properly within the powers granted under this Ordinance in the denial or suspension of a permit. A majority vote of a quorum of the City Council shall determine whether to uphold or reject the City Administrator's, or his/her designated representative's action. Upholding the action of the City Administrator, or his/her designated representative, shall affirm the denial or suspension. Rejection of the City Administrator's, or his/her designated representative's, action shall automatically grant a permit or reinstate a suspended permit. The decision of the City Council shall be final.

- E. No person whose permit has been denied or suspended, shall create or allow the creation of the noise disturbance in dispute prior to final determination by the City Council.

SECTION 9: Penalty. Any person who violates any provision of this Ordinance shall be deemed guilty of a misdemeanor, and upon conviction, shall be fined in an amount not exceeding Five Hundred Dollars (\$500.00). A violation of any provision of this Ordinance shall constitute a separate violation for each calendar day in which it occurs. The penal provisions imposed under this Ordinance shall not preclude Dorchester from filing suit to enjoin the violation. Dorchester retains all legal rights and remedies available to it pursuant to local, state and federal law.

SECTION 10: Savings/Repealing. All provisions of any ordinance in conflict with this Ordinance are hereby repealed to the extent they are in conflict; but such repeal shall not abate any pending prosecution for violation of the repealed ordinance, nor shall the repeal prevent a prosecution from being commenced for any violation if occurring prior to the repeal of the ordinance. Any remaining portions of said ordinances shall remain in full force and effect.

SECTION 11: Severability. Should any section, subsection, sentence, clause or phrase of this Ordinance be declared unconstitutional and/or invalid by a court of competent jurisdiction, it is expressly provided that any and all remaining portions of this Ordinance shall remain in full force and effect. The City Council hereby declares that it would have passed this Ordinance, and each section, subsection, sentence, clause and phrase thereof regardless of whether any one or more sections, subsections, sentences, clauses and/or phrases may be declared unconstitutional and/or invalid.

SECTION 12: Effective Date. This Ordinance shall become effective from and after the date of its adoption and publication as provided by Texas law.

[The remainder of this page intentionally left blank.]

DULY PASSED AND APPROVED BY THE CITY COUNCIL OF THE CITY OF
DORCHESTER, TEXAS on this 10 day of January, 2022

David Smith, Mayor

ATTESTED TO BY:

Becky Vincent, City Secretary

APPROVED AS TO FORM:

Abernathy Roeder Boyd & Hullett, P.C.

Ryan D. Pittman, City Attorneys

- (i) **Public participation requirements.** The reviewing authority shall notify the public of a draft permit by a method described in either paragraph (i)(1) or (2) of this section. The selected method, known as the "consistent noticing method," shall comply with the public participation procedural requirements of § 51.161 of this chapter and be used for all permits issued under this section and may, when appropriate, be supplemented by other noticing methods on individual permits.
- (1) Post the information in paragraphs (i)(1)(i) through (iii) of this section, for the duration of the public comment period, on a public Web site identified by the reviewing authority.
 - (i) A notice of availability of the draft permit for public comment;
 - (ii) The draft permit; and
 - (iii) Information on how to access the administrative record for the draft permit.
- (2) Publish a notice of availability of the draft permit for public comment in a newspaper of general circulation in the area where the source is located. The notice shall include information on how to access the draft permit and the administrative record for the draft permit.

[51 FR 40669, Nov. 7, 1986]

Editorial Note: For FEDERAL REGISTER citations affecting § 51.165, see the List of CFR Sections Affected, which appears in the Finding Aids section of the printed volume and at www.govinfo.gov.

Effective Date Note: At 76 FR 17552, Mar. 30, 2011, § 51.165, paragraphs (a)(1)(v)(G) and (v)(1)(vi)(C)(3) are stayed indefinitely.

§ 51.166 Prevention of significant deterioration of air quality.

- (a)
 - (1) **Plan requirements.** In accordance with the policy of section 101(b)(1) of the Act and the purposes of section 160 of the Act, each applicable State Implementation Plan and each applicable Tribal Implementation Plan shall contain emission limitations and such other measures as may be necessary to prevent significant deterioration of air quality.
 - (2) **Plan revisions.** If a State Implementation Plan revision would result in increased air quality deterioration over any baseline concentration, the plan revision shall include a demonstration that it will not cause or contribute to a violation of the applicable increment(s). If a plan revision proposing less restrictive requirements was submitted after August 7, 1977 but on or before any applicable baseline date and was pending action by the Administrator on that date, no such demonstration is necessary with respect to the area for which a baseline date would be established before final action is taken on the plan revision. Instead, the assessment described in paragraph (a)(4) of this section, shall review the expected impact to the applicable increment(s).
 - (3) **Required plan revision.** If the State or the Administrator determines that a plan is substantially inadequate to prevent significant deterioration or that an applicable increment is being violated, the plan shall be revised to correct the inadequacy or the violation. The plan shall be revised within 60 days of such a finding by a State or within 60 days following notification by the Administrator, or by such later date as prescribed by the Administrator after consultation with the State.

- (4) **Plan assessment.** The State shall review the adequacy of a plan on a periodic basis and within 60 days of such time as information becomes available that an applicable increment is being violated.
- (5) **Public participation.** Any State action taken under this paragraph shall be subject to the opportunity for public hearing in accordance with procedures equivalent to those established in § 51.102.
- (6) **Amendments.**
 - (i) Any State required to revise its implementation plan by reason of an amendment to this section, with the exception of amendments to add new maximum allowable increases or other measures pursuant to section 166(a) of the Act, shall adopt and submit such plan revision to the Administrator for approval no later than 3 years after such amendment is published in the FEDERAL REGISTER. With regard to a revision to an implementation plan by reason of an amendment to paragraph (c) of this section to add maximum allowable increases or other measures, the State shall submit such plan revision to the Administrator for approval within 21 months after such amendment is published in the FEDERAL REGISTER.
 - (ii) Any revision to an implementation plan that would amend the provisions for the prevention of significant air quality deterioration in the plan shall specify when and as to what sources and modifications the revision is to take effect.
 - (iii) Any revision to an implementation plan that an amendment to this section required shall take effect no later than the date of its approval and may operate prospectively.
- (7) **Applicability.** Each plan shall contain procedures that incorporate the requirements in paragraphs (a)(7)(i) through (v) of this section.
 - (i) The requirements of this section apply to the construction of any new major stationary source (as defined in paragraph (b)(1) of this section) or any project at an existing major stationary source in an area designated as attainment or unclassifiable under sections 107(d)(1)(A)(ii) or (iii) of the Act.
 - (ii) The requirements of paragraphs (j) through (r) of this section apply to the construction of any new major stationary source or the major modification of any existing major stationary source, except as this section otherwise provides.
 - (iii) No new major stationary source or major modification to which the requirements of paragraphs (j) through (r)(5) of this section apply shall begin actual construction without a permit that states that the major stationary source or major modification will meet those requirements.
 - (iv) Each plan shall use the specific provisions of paragraphs (a)(7)(iv)(a) through (f) of this section. Deviations from these provisions will be approved only if the State specifically demonstrates that the submitted provisions are more stringent than or at least as stringent in all respects as the corresponding provisions in paragraphs (a)(7)(iv)(a) through (f) of this section.
 - (a) Except as otherwise provided in paragraph (a)(7)(v) of this section, and consistent with the definition of major modification contained in paragraph (b)(2) of this section, a project is a major modification for a regulated NSR pollutant if it causes two types of emissions increases—a significant emissions increase (as defined in paragraph (b)(39) of this section), and a significant net emissions increase (as defined in paragraphs (b)(3) and (23) of this section). The project is not a major modification if it does not cause a

significant emissions increase. If the project causes a significant emissions increase, then the project is a major modification only if it also results in a significant net emissions increase.

- (b) The procedure for calculating (before beginning actual construction) whether a significant emissions increase (i.e., the first step of the process) will occur depends upon the type of emissions units being modified, according to paragraphs (a)(7)(iv)(c) through (f) of this section. The procedure for calculating (before beginning actual construction) whether a significant net emissions increase will occur at the major stationary source (i.e., the second step of the process) is contained in the definition in paragraph (b)(3) of this section. Regardless of any such preconstruction projections, a major modification results if the project causes a significant emissions increase and a significant net emissions increase.
- (c) **Actual-to-projected-actual applicability test for projects that only involve existing emissions units.** A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the difference between the projected actual emissions (as defined in paragraph (b)(40) of this section) and the baseline actual emissions (as defined in paragraphs (b)(47)(i) and (ii) of this section) for each existing emissions unit, equals or exceeds the significant amount for that pollutant (as defined in paragraph (b)(23) of this section).
- (d) **Actual-to-potential test for projects that only involve construction of a new emissions unit(s).** A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the difference between the potential to emit (as defined in paragraph (b)(4) of this section) from each new emissions unit following completion of the project and the baseline actual emissions (as defined in paragraph (b)(47)(iii) of this section) of these units before the project equals or exceeds the significant amount for that pollutant (as defined in paragraph (b)(23) of this section).
- (e) [Reserved]
- (f) **Hybrid test for projects that involve multiple types of emissions units.** A significant emissions increase of a regulated NSR pollutant is projected to occur if the sum of the difference for all emissions units, using the method specified in paragraphs (a)(7)(iv)(c) through (d) of this section as applicable with respect to each emissions unit, equals or exceeds the significant amount for that pollutant (as defined in paragraph (b)(23) of this section).
- (g) The "sum of the difference" as used in paragraphs (c), (d) and (f) of this section shall include both increases and decreases in emissions calculated in accordance with those paragraphs.
- (v) The plan shall require that for any major stationary source with a PAL for a regulated NSR pollutant, the major stationary source shall comply with requirements under paragraph (w) of this section.
- (b) **Definitions.** All State plans shall use the following definitions for the purposes of this section. Deviations from the following wording will be approved only if the State specifically demonstrates that the submitted definition is more stringent, or at least as stringent, in all respects as the corresponding definitions below:
 - (1)

- (i) **Major stationary source** means:
 - (a) Any of the following stationary sources of air pollutants which emits, or has the potential to emit, 100 tons per year or more of any regulated NSR pollutant: Fossil fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input, coal cleaning plants (with thermal dryers), kraft pulp mills, portland cement plants, primary zinc smelters, iron and steel mill plants, primary aluminum ore reduction plants (with thermal dryers), primary copper smelters, municipal incinerators capable of charging more than 50 tons of refuse per day, hydrofluoric, sulfuric, and nitric acid plants, petroleum refineries, lime plants, phosphate rock processing plants, coke oven batteries, sulfur recovery plants, carbon black plants (furnace process), primary lead smelters, fuel conversion plants, sintering plants, secondary metal production plants, chemical process plants (which does not include ethanol production facilities that produce ethanol by natural fermentation included in NAICS codes 325193 or 312140), fossil-fuel boilers (or combinations thereof) totaling more than 250 million British thermal units per hour heat input, petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels, taconite ore processing plants, glass fiber processing plants, and charcoal production plants;
 - (b) Notwithstanding the stationary source size specified in paragraph (b)(1)(i)(a) of this section, any stationary source which emits, or has the potential to emit, 250 tons per year or more of a regulated NSR pollutant; or
 - (c) Any physical change that would occur at a stationary source not otherwise qualifying under paragraph (b)(1) of this section as a major stationary source, if the change would constitute a major stationary source by itself.
- (ii) A major source that is major for volatile organic compounds or NO_x shall be considered major for ozone.
- (iii) The fugitive emissions of a stationary source shall not be included in determining for any of the purposes of this section whether it is a major stationary source, unless the source belongs to one of the following categories of stationary sources:
 - (a) Coal cleaning plants (with thermal dryers);
 - (b) Kraft pulp mills;
 - (c) Portland cement plants;
 - (d) Primary zinc smelters;
 - (e) Iron and steel mills;
 - (f) Primary aluminum ore reduction plants;
 - (g) Primary copper smelters;
 - (h) Municipal incinerators capable of charging more than 50 tons of refuse per day;
 - (i) Hydrofluoric, sulfuric, or nitric acid plants;
 - (j) Petroleum refineries;
 - (k) Lime plants;
 - (l) Phosphate rock processing plants;

- (m) Coke oven batteries;
- (n) Sulfur recovery plants;
- (o) Carbon black plants (furnace process);
- (p) Primary lead smelters;
- (q) Fuel conversion plants;
- (r) Sintering plants;
- (s) Secondary metal production plants;
- (t) Chemical process plants—The term chemical processing plant shall not include ethanol production facilities that produce ethanol by natural fermentation included in NAICS codes 325193 or 312140;
- (u) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
- (v) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (w) Taconite ore processing plants;
- (x) Glass fiber processing plants;
- (y) Charcoal production plants;
- (z) Fossil fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input, and
- (aa) Any other stationary source category which, as of August 7, 1980, is being regulated under section 111 or 112 of the Act.

(2)

- (i) **Major modification** means any physical change in or change in the method of operation of a major stationary source that would result in: a significant emissions increase (as defined in paragraph (b)(39) of this section) of a regulated NSR pollutant (as defined in paragraph (b)(49) of this section); and a significant net emissions increase of that pollutant from the major stationary source.
- (ii) Any significant emissions increase (as defined at paragraph (b)(39) of this section) from any emissions units or net emissions increase (as defined in paragraph (b)(3) of this section) at a major stationary source that is significant for volatile organic compounds or NO_x shall be considered significant for ozone.
- (iii) A physical change or change in the method of operation shall not include:
 - (a) Routine maintenance, repair and replacement;

Note to paragraph (b)(2)(iii)(a): On December 24, 2003, the second sentence of this paragraph (b)(2)(iii)(a) is stayed indefinitely by court order. The stayed provisions

will become effective immediately if the court terminates the stay. At that time, EPA will publish a document in the FEDERAL REGISTER advising the public of the termination of the stay.

- (b) Use of an alternative fuel or raw material by reason of any order under section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;
- (c) Use of an alternative fuel by reason of an order or rule under section 125 of the Act;
- (d) Use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;
- (e) Use of an alternative fuel or raw material by a stationary source which:
 - (1) The source was capable of accommodating before January 6, 1975, unless such change would be prohibited under any federally enforceable permit condition which was established after January 6, 1975, pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR part 51, subpart I.
 - (2) The source is approved to use under any permit issued under 40 CFR 52.21 or under regulations approved pursuant to 40 CFR 51.166;
- (f) An increase in the hours of operation or in the production rate, unless such change would be prohibited under any federally enforceable permit condition which was established after January 6, 1975, pursuant to 40 CFR 52.21 or under regulations approved pursuant to 40 CFR part 51, subpart I.
- (g) Any change in ownership at a stationary source.
- (h) [Reserved]
- (i) The installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, provided that the project complies with:
 - (1) The State implementation plan for the State in which the project is located; and
 - (2) Other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated.
- (j) The installation or operation of a permanent clean coal technology demonstration project that constitutes repowering, provided that the project does not result in an increase in the potential to emit of any regulated pollutant emitted by the unit. This exemption shall apply on a pollutant-by-pollutant basis.
- (k) The reactivation of a very clean coal-fired electric utility steam generating unit.
- (iv) This definition shall not apply with respect to a particular regulated NSR pollutant when the major stationary source is complying with the requirements under paragraph (w) of this section for a PAL for that pollutant. Instead, the definition at paragraph (w)(2)(viii) of this section shall apply.

- (v) Fugitive emissions shall not be included in determining for any of the purposes of this section whether a physical change in or change in the method of operation of a major stationary source is a major modification, unless the source belongs to one of the source categories listed in paragraph (b)(1)(iii) of this section.

(3)

- (i) **Net emissions increase** means, with respect to any regulated NSR pollutant emitted by a major stationary source, the amount by which the sum of the following exceeds zero:
 - (a) The increase in emissions from a particular physical change or change in the method of operation at a stationary source as calculated pursuant to paragraph (a)(7)(iv) of this section; and
 - (b) Any other increases and decreases in actual emissions at the major stationary source that are contemporaneous with the particular change and are otherwise creditable. Baseline actual emissions for calculating increases and decreases under this paragraph (b)(3)(i)(b) shall be determined as provided in paragraph (b)(47), except that paragraphs (b)(47)(i)(c) and (b)(47)(ii)(d) of this section shall not apply.
- (ii) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs within a reasonable period (to be specified by the State) before the date that the increase from the particular change occurs.
- (iii) An increase or decrease in actual emissions is creditable only if:
 - (a) It occurs within a reasonable period (to be specified by the reviewing authority); and
 - (b) The reviewing authority has not relied on it in issuing a permit for the source under regulations approved pursuant to this section, which permit is in effect when the increase in actual emissions from the particular change occurs; and
 - (c) [Reserved]
 - (d) As it pertains to an increase or decrease in fugitive emissions (to the extent quantifiable), it occurs at an emissions unit that is part of one of the source categories listed in paragraph (b)(1)(iii) of this section or it occurs at an emission unit that is located at a major stationary source that belongs to one of the listed source categories. Fugitive emission increases or decreases are not included for those emissions units located at a facility whose primary activity is not represented by one of the source categories listed in paragraph (b)(1)(iii) of this section and that are not, by themselves, part of a listed source category.
- (iv) An increase or decrease in actual emissions of sulfur dioxide, particulate matter, or nitrogen oxides that occurs before the applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available.
- (v) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.
- (vi) A decrease in actual emissions is creditable only to the extent that:

- (a) The old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;
 - (b) It is enforceable as a practical matter at and after the time that actual construction on the particular change begins;
 - (c) It has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change; and
- (vii) An increase that results from a physical change at a source occurs when the emissions unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.
- (viii) Paragraph (b)(21)(ii) of this section shall not apply for determining creditable increases and decreases.
- (4) **Potential to emit** means the maximum capacity of a stationary source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is federally enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.
- (5) **Stationary source** means any building, structure, facility, or installation which emits or may emit a regulated NSR pollutant.
- (6)
- (i) **Building, structure, facility, or installation** means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control) except the activities of any vessel. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same *Major Group* (i.e., which have the same two-digit code) as described in the *Standard Industrial Classification Manual, 1972*, as amended by the 1977 Supplement (U.S. Government Printing Office stock numbers 4101-0066 and 003-005-00176-0, respectively).
 - (ii) The plan may include the following provision: Notwithstanding the provisions of paragraph (b)(6)(i) of this section, *building, structure, facility, or installation* means, for onshore activities under SIC Major Group 13: Oil and Gas Extraction, all of the pollutant-emitting activities included in Major Group 13 that are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Pollutant emitting activities shall be considered adjacent if they are located on the same surface site; or if they are located on surface sites that are located within $\frac{1}{4}$ mile of one another (measured from the center of the equipment on the surface site) and they share equipment. Shared equipment includes, but is not limited to, produced fluids storage tanks, phase separators, natural gas dehydrators or emissions control devices. Surface site, as used in this paragraph (b)(6)(ii), has the same meaning as in 40 CFR 63.761.

2. PROCESS DESCRIPTION AND PROCESS FLOW DIAGRAMS

The proposed Dorchester Plant will be located in Dorchester, Grayson County, Texas. The plant covers approximately 660 acres along Farm to Market (FM) 902 and Dorchester Road. An area map and plot plan of the proposed Dorchester Plant are provided in Appendix A.

A majority of the limestone used in the portland cement production process is drawn from an on-site quarry. The limestone is crushed and blended on-site, then fed into the kiln system to be calcined. Portland cement clinker then exits the kiln and is cooled. The clinker is then mixed with other materials, such as gypsum, and milled into a fine powder (cement) before being shipped offsite by truck or rail. Best management practices will be employed to minimize emissions from the paved plant roads.²

The following subsections provide a detailed process description of the proposed plant. Process flow diagrams are provided at the end of this section.

2.1 Raw Material Handling and Storage

Black Mountain will mine limestone from the on-site quarry. There will be drilling, blasting, truck loading, and hauling activities associated with these mining activities. Best management practices will be employed to minimize emissions from the quarry and associated roads.³

The mined limestone from the quarry will be hauled to a limestone crusher building by truck, where it will be crushed and conveyed in an enclosed storage building referred to as the limestone storage building. From the limestone storage building, the limestone will be conveyed to the raw material storage bins which feed the raw mill. Dust collectors will be used to control particulate matter (PM) emissions from stationary equipment where feasible (e.g., hoppers, crushers, feeders, and conveyor transfer points).

Raw materials and cement additives that are not mined on-site, such as gypsum, high grade limestone, and sand will be hauled to the plant by truck or rail to an additive storage building. The trucks will unload the materials into a hopper that will convey the materials to specific locations in the building for storage. From the additive storage building, the materials will be conveyed to the raw material storage bins or will be conveyed to the finish mill and used as an additive to the cement.

2.2 Raw Material Milling, Blending, and Storage

The raw material components to be ground in the raw mill typically include limestone, limestone fines, shale, and sandstone. These or similar raw material components will be blended to provide the desired chemistry for use as raw materials for the production of cement clinker. The raw materials will then be metered in the right proportion and conveyed to the raw mill via a common conveyor belt system.

The function of the raw mill is to dry and grind the raw materials. Mix components will be blended to achieve the required chemistry for the manufacture of clinker. In the raw mix area, the raw materials will pass through a metal separator and detector system to eliminate any metal into the mill and the clean raw

² Per Title 30 of the Texas Administrative Code (30 TAC) 116.10(4), a mine, quarry, well test, or road is not a facility.

2022 NAICS Definition

T = Canadian, Mexican, and United States industries are comparable.

327310 Cement Manufacturing

This industry comprises establishments primarily engaged in manufacturing Portland, natural, masonry, pozzolanic, and other hydraulic cements. Cement manufacturing establishments may calcine earths or mine, quarry, manufacture, or purchase lime.

Cross-References. Establishments primarily engaged in—

- Mining or quarrying limestone—are classified in U.S. Industry 212312, Crushed and Broken Limestone Mining and Quarrying;
- Manufacturing lime—are classified in Industry 327410, Lime Manufacturing;
- Manufacturing ready-mix concrete—are classified in Industry 327320, Ready-Mix Concrete Manufacturing; and
- Manufacturing dry mix concrete—are classified in U.S. Industry 327999, All Other Miscellaneous Nonmetallic Mineral Product Manufacturing.

IX. Emissions Review

A. Impacts Analysis

Any change that may result in an increase in off-property concentrations of air contaminants requires an air quality impacts demonstration, which may include a qualitative analysis, the MERA, and/or modeling. Information regarding the air quality impacts demonstration must be provided with the application and show compliance with all state and federal requirements. Detailed requirements for the information necessary to make the demonstration are listed on the Impacts sheet.

Are there any increases in short-term and/or long-term allowable emission rates?	Yes
Can all the emission rate increases be attributed to speciation of currently authorized PM emissions and/or revisions of AP-42 or TCEQ guidance?	No
Are there any new or modified control devices or emission sources?	Yes
Are there any changes to emission point discharge parameters? Consider all parameters on the Stack Parameters sheet, including location.	Yes
Will any PBR registrations, standard permit, or standard exemptions be incorporated by consolidation?	No
Does this project require an impacts analysis?	Yes

Will off property impacts for any of the pollutants require Tier III Toxicology Effects Evaluation as defined in Appendix D of MERA?

No

B. Disaster Review

If the proposed facility will handle sufficient quantities of certain chemicals which, if released accidentally, would cause off-property impacts that could be immediately dangerous to life and health, a disaster review analysis may be required as part of the application. Contact the appropriate NSR permitting section for assistance at (512) 239-1250. Additional Guidance can be found at the link below:

<https://www.tceq.texas.gov/assets/public/permitting/air/Guidance/NewSourceReview/disrev-factsheet.pdf>

Does this application involve any air contaminants for which a disaster review is required?

No

C. Air Pollutant Watch List

Certain areas of the state have concentrations of specific pollutants that are of concern. The TCEQ has designated these portions of the state as watch list areas. Location of a facility in a watch list area could result in additional restrictions on emissions of the affected air pollutant(s) or additional permit requirements. The location of the areas and pollutants of interest can be found at the link below:

<https://www.tceq.texas.gov/toxicology/apwl/apwl.html>

Is the proposed facility located in a watch list area?

No

D. Mass Emissions Cap and Trade

Is this facility located at a site within the Houston/Galveston nonattainment area (Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, and Waller Counties)?

No

Texas Commission on Environmental Quality

Electronic Modeling Evaluation Workbook (EMEW)

Model Options

Date: June 21

Permit #: 1670

Company Name: BM Dorchester L

Dispersion Options: If "Urban" has been selected and this project is using AERMOD or AERSCREEN, include the population used. Select "X" in the box to select an option.

☐ Urban
☐ Rural

Provide any additional justification on the dispersion option selected above.
The area surrounding the site is greater than 70% rural

Determination of Surface Roughness: If AERSCREEN or AERMOD is used, fill out the section below.

Select basis for surface roughness: AERSURFACE

Select "X" in one of the three surface roughness categories:

☐ Low ☐ Medium ☐ High

If you are using AERSURFACE, please complete the following section.

0060 AERSURFACE Version Number
14695 Center UTM Easting (meters) 3713493 Center UTM Northing (meters)
Study Radius (km)
Airport? (Select Yes or No)
Continuous Snow Cover (Select Yes or No)
Average Surface Moisture (Select Wet, Dry, or Average)
Arid Region? (Select Yes or No)

Permit #: 167047
Company: BM Dorchester LLC

III. Small Business Classification

Complete this section to determine small business classification. If a small business requests a permit, agency rules (30 TAC § 39.603(f)(1)(A)) allow for alternative public notification requirements if all of the following criteria are met. If these requirements are met, public notice does not have to include publication of the prominent (12 square inch) newspaper notice.

Does the company (including parent companies and subsidiary companies) have fewer than 100 employees or less than \$6 million in annual gross receipts?	Yes
Is the site a major source under 30 TAC Chapter 122, Federal Operating Permit Program?	Yes
Small business classification:	No

PROTECTION OF FEDERAL FUNDS AND NATIONAL SECURITY

President Biden, Senator Cornyn, Senator Cruz, and Representative Fallon

Governor Abbott, Senator Springer, and Representative Smith,

We come to you in great concern of an ongoing attempt for the allowance of a cement kiln and quarry or mining operation in the direct vicinity of a direct recipient of Federal monies to make this Nation safe from international attempts that would threaten our production of not only consumer products, but also the chips and semi-conductors used and needed for the equipment and operation of our great military. This application is being considered outside the guidelines of the Federal requirements of Clean Air Act. Please read the body of this letter for more information and the ending to protect our Federal dollars.

We also come to you out of great concern for the health and safety of the residents of the area. A proposed cement kiln has an application (project 335160) that is still under consideration with the TCEQ, when the legal requirements of the permit are being ignored, and the modeling maps are incorrect and appear to be grossly misstated for the attempt to have a permit pushed through. Since this is a federal permit being handled by the state, there should be a higher oversight that can be attained if requested for the health and safety of the residents, businesses, Church, School, and owners of land that was platted residential before the application was ever submitted.

Attention to the posting of this Permit request is very concerning. It was posted a total of 9 days of the required 30 days on the major road frontage. This was reported and allowed, when others in the area were made to repost or facilitate arrangements to keep their signs posted; this is alarming and a direct violation of federal law. In a very quick glance at the application (the latest workbook supplement submitted) there are several major incorrect answers; such slipshod work is alarming.

In the Public Notice section, questions 90 & 91 are untrue on the bilingual statements, question 116 is not correct as affected states (Oklahoma) and the affected Choctaw and Chickasha Nations require notification, and question 127 should be incorrect as the owners have been reported to own over 100 companies in Texas well exceeding the questioned 100 employee threshold.

In the General Section, question 107 stating a school is not in the 3,000-foot area is untrue, question 154 about school and residences mapping, though included, is terribly incorrect, and questions 158 and 159 on all emission points included is untrue, thus making most of the application and data (modeling protocol) invalid on a federal application for permit.

In the Tech Section; question 165 on off property MCRA appears to be incorrect, and question 168 on Disaster Review for site needs is untrue (anhydrous ammonia is a listed agent, possibly others).

The application has repeatedly used an inaccurate area map for its modeling protocols, even after being reported in the comments and constant changing of the modeling protocols to attempt to meet specifications on the erroneous shown land uses. There are residents on the north and north-east direction from the facility (none shown on the area map). On the south side, a School Site (part of the Church) not correctly identified, and residents, along with a great number of residential lots touching the facility property already filed and platted with the County before the Kiln application was filed, thus giving them the protection of building homes and having the residents safe. See the attached area map marked "A" to see non reported interests (bordered in black with white filling), this will allow the kiln to only operate 12 hours a day at best.

Also on the south side of the Facility is an operating FAA Public General Aviation airport. The proximity of the Kiln, with the height (350 ft approx.) of the facility directly contradicts acceptable land uses (safety zone) around an airport as specified by the FAA of a 20:1 ratio down to a 5:1 ratio. The site plan also shows a cooling water reservoir and a settling pond which are also not acceptable land uses in this proximity of an airport as specified by the FAA. Please see attached area map marked "B" to see the airport bordering the Kiln property. This is also marked as "no" as an airport in the area, on in the Electronic Modeling Evaluation Workbook.

This permit also shows that an enormous 30 semi-tractor trailer loads of dust will be released each year, potentially suffocating the scrubbers or air handlers for industries, harming the health of the surrounding people, crops, and livestock. This amount is only what the permit shows for the kiln portion of the facility(state rules), we believe with a federal inquiry

that the whole facility (as listed in their executive summary) would be required to report, including the quarry or surface mine, and probably would be five times the reported amount with the blasting, handling, and transportation of the limestone throughout the property before reaching the kiln itself (this is a federal permit being processed by the state). I also have to question with Lake Texoma (the major water source for the area) to the North of this facility: What danger will it impose to our drinking water with this type of soluble particulate and the pollution (including lead) it will cause to the drinking water over time? With the extremely close proximity of surrounding properties and residents, there is not a conceivable way for this facility to operate in the guidelines of particulate pollution, light pollution, noise pollution, and seismic disturbances in the required levels due to city ordinances prohibiting operations. I feel it disturbing with the multiple billions of dollars being invested in the technology sector less than 4 miles away, 3 major schools from 3.5 to 5 miles north, and other businesses in the immediate area, that an operation that would cause physical damage to current structures (putting lives in risk) and future supporting projects would be considered. I have family that lives the same distance from the Midlothian sites, and when blasting, can hear and feel the blast. It is also noted that it is common for dust problems in the area, but consistently when it is reported the reply is the air monitors are inoperable or out for calibration leaving the citizens that TCEQ is responsible for protecting, unprotected. This could be solved easily by having repetitive monitoring on a system that seems to be consistently inoperable when needed. We also feel that it also a regular occurrence for this type of facility to obtain a permit in Texas, and to then amend for an alternative fuel type. This is wrong in our opinion as the permit was obtained using a cleaner fuel and then changed (in this case there is not a natural gas line on or in the close proximity of the facility). These permits should be locked into the application fuel source unless it is a "cleaner" fuel, not biased on economics for the facility to have a larger bottom line financially.

In conclusion, if this application continues with the above deficiencies, I believe a request to the OIG to do an investigation with the EPA, in the partnership with the State of Texas, for allowing a federal permit to continue in an illegal process. The application has gone over a year now trying to change its modeling protocol to squeeze by to just meet the incorrect parameters (area map and complete facility). There is not a modeling protocol that should be considered unless it is using factual information. I would also like to bring attention to the haphazard wording that the clinker cooler is to be removed from the facility in the cover letter to the supplement to allow this facility's modeling protocol to be considered again, even though all attachments, processes, and flow charts still show that it is included, and would physically be necessary to allow the clinker to move to storage/processing. If the thought of processing the cooling exhaust through the same stack as the Kiln, why is the stack the same size in the original plan with an incredible increase of air volume (this is also questionable, with the combination of stacks they are magically losing 46 acfm of stack flow)? There are 7 schools within 5 miles of this proposed facility, numerous day cares and pre-K programs that are critical to protect. Due to the extremely close proximity to surrounding concerns for the health, safety, and property damage that will occur if this facility would be approved, we feel the State would be considered grossly negligent in ignoring the facts contained.

Also needed is immediate restrictions or legislation passed for that protects the areas around these facilities that are producing the required products for this nation to operate in its own defense. There should be restrictions of mining or quarries in the vicinities of these operations and producers of particulate matter that would cause problems to the air quality that is needed in this operation to make reliable chips and semi-conductors for our national security operations. Our current system allows for the possibility of kilns/quarries to apply to areas that would disable tech companies, or be put in a position of demanding a payoff to not construct, basically blackmail for continued operations (at this point even it is evident they do not have a sufficient application), thus tapping into federal funds. This could be not only a Grayson County problem, but a nationwide problem where these seismic and air quality sensitive facilities are located to produce our needed products for the defense of our nation and the rebuild of our nation's economy.

Sincerely,

David Smith, Mayor
City of Dorchester

CITY OF DORCHESTER, TEXAS
RESOLUTION NO. 0524

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF DORCHESTER, TEXAS, OPPOSING ALL PERMITS REQUESTED FROM THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY, THE FEDERAL ENVIRONMENTAL PROTECTION AGENCY, THE FEDERAL AVIATION ADMINISTRATION AND ALL OTHER LOCAL, STATE AND FEDERAL GOVERNMENTAL AGENCIES BY BM DORCHESTER, LLC, REGARDING THE CONSTRUCTION OF THE PROPOSED DORCHESTER CEMENT PRODUCTION PLANT (PRECALCINER KILN AND ASSOCIATED EQUIPMENT FACILITY) AND OPERATION OF PERMANENT ROCK AND CONCRETE CRUSHERS (QUARRY) AT A SITE EAST OF THE HIGHWAY 289 AND FM 902 INTERSECTION APPROXIMATELY .80 MILES, DIRECTLY NORTH OF FM 902 AFTER THE TAYLOR ROAD INTERSECTION; RECOGNIZING THE PUBLIC HEALTH, SAFETY, AND WELFARE IMPLICATIONS OF THE PROPOSED OPERATION; AND URGING THOROUGH REVIEW OF SAID APPLICATIONS.

WHEREAS, City Council of the City of Dorchester, Texas ("City Council") finds it to be in the public interest and necessary for the public health, safety, and welfare to announce and submit its concerns regarding potential nuisances resulting from a proposed use of land that the City Council believes is incompatible with surrounding uses and sound regional planning; and

WHEREAS, BM Dorchester, LLC, is seeking to build and operate a 660-acre cement production plant consisting of a precalciner kiln and associated equipment facility and permanent rock and concrete crushers (quarry) facility (collectively, the "Cement Plant") at a site east of the Highway 289 and FM 902 intersection approximately .80 miles directly north of FM 902 after the Taylor Road intersection; and

WHEREAS, a portion of the Cement Plant site is currently located within the jurisdictional boundaries of the City of Dorchester, with the remainder located within the City's and Sherman's extraterritorial jurisdiction; and

WHEREAS, BM Dorchester, LLC, has applied to state and federal governmental agencies for permits regarding the construction and operation of the Cement Plant (collectively, the "Permits"), including but not limited to applications for Permit Nos. 167047, PSDTX1602, GHGPSDTX212; and

WHEREAS, City Council is concerned about potential air, noise, blast, seismic waves and light pollution from the proposed Cement Plant and the nuisance conditions that could result from the operation. For example, seismic waves and other activity emanating from the Cement Plant could negatively affect sensitive landowners and users nearby, including high-technology manufacturers with multi-billion dollar production facilities in the area that are essential to our

10-1

local, state and national economy; and

WHEREAS, specifically, the proposed site is located in extremely close proximity to the Dorchester Baptist Church, commercial businesses, and residential properties. Dorchester Baptist Church is also home to a school (First Class North Texas) with 100 students that meet once per week for both indoor and outdoor activities. In fact, the place of worship and at least one residential property are both situated right on the boundary line of the site. In addition, an airport (TxAerosport Aerodrome) is located in close proximity to the site. As such, the proposed site does not comply with applicable rules governing distance limitations; and

WHEREAS, approval of the requested Permits will result in significant negative impacts to the health, safety, and welfare of citizens; water quality and availability; the watershed and floodplain; air quality; traffic flow; roadway safety; wildlife habitat; and property values within the City and its extraterritorial jurisdiction as well as Grayson County; and

WHEREAS, should the Permits be approved and the Cement Plant begin operations, the monetary damages resulting from the significant negative impacts described above will exceed \$100,000,000. The City Council is prepared to fight to protect the health, safety, welfare, and property rights of its citizens, businesses, and other stakeholders, and the City Council encourages others in the community to do the same; and

WHEREAS, City Council is also concerned about potential air, noise, blast, seismic waves and light pollution from the proposed Cement Plant and the nuisance conditions that could result from the operation. For example, seismic waves and other activity emanating from the Cement Plant could negatively affect sensitive landowners and users nearby, including high-technology manufacturers with multi-billion dollar production facilities in the area that are essential to our local, state and national economy; and

WHEREAS, the site for the proposed Cement Plant is located in the middle of a major and growing employment corridor, which includes jobs that are incentivized by the State of Texas and local jurisdictions; and

WHEREAS, City Council supports private property rights and the rights of property owners to develop their property as they wish so long as they do so in compliance with all federal, state, and local laws and regulations, and they do so in ways that do not negatively impact surrounding property owners or their uses and property values; and

WHEREAS, based upon the information and concerns stated above, City Council finds that its action in adopting this Resolution is in the public interest as to the public's health, safety, and general welfare.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF DORCHESTER, GRAYSON COUNTY, TEXAS:

SECTION ONE. The City Council hereby states its opposition to the proposed Cement

Plant and the Permits. The City Council finds that location of the Plant near the existing TxAerosport Aerodrome would have construction at an approximate 5:1 ratio from around 600 feet from the runway on the clear runway view of the traffic pattern (west) for the airport. This would not be a single obstruction but almost a wall of many structures stretching 3,000 feet long. See attached. We understand a 20:1 ratio or greater is presents a safety risk for air traffic and intrusion upon airspace.

SECTION TWO. The City Council also finds the Plant's application(s) to the TCEQ in connection with the Title V Federal Permit is invalid when the local ordinances are applied and the Federal Aviation Administration safety guidelines are considered. Also, federal rules for the air study/modeling should include all points of emissions of the Plant. Moreover, the Plant cannot be operated 24/7 as stated in the modeling, and the Plant cannot be constructed as proposed based on the published safety guidelines of the FAA for safety around airports.

SECTION THREE. This Resolution shall become effective immediately.

DULY PASSED AND APPROVED BY THE CITY COUNCIL OF THE CITY OF DORCHESTER, TEXAS on this 4th day of March, 2024.

David Smith, Mayor

ATTESTED TO BY:

Becky Vincent, City Secretary

11. PSD ADDITIONAL IMPACT ANALYSIS

The PSD additional impacts analysis provides an analysis of the project's potential impact on local soils, vegetation, and visibility in the project area. The additional impacts analysis is conducted for the pollutants subject to PSD review for the project and is presented in four parts:

1. Growth analysis
2. Soils and vegetation analysis
3. Visibility impairment analysis
4. PSD Class I area impact analysis

11.1 Growth Analysis

The elements of the growth analysis include a projection of the associated industrial, commercial, and residential growth that will occur in the area of impact due to the proposed project, including the potential impact on ambient air due to this growth. Black Mountain anticipates that most of the employees of the proposed facility will be existing residents of Grayson County and nearby counties; therefore, residential growth is expected to be low. Black Mountains does not anticipate any associated industrial or commercial growth due to the proposed facility. Therefore, negligible growth-related ambient air impacts are expected.

11.2 Soils and Vegetation Analysis

The U.S. EPA developed the secondary NAAQS in order to protect certain air quality-related values (i.e., soil and vegetation) that were not sufficiently protected by the primary NAAQS. The secondary NAAQS represent ambient air concentrations below which most types of soil and vegetation are unaffected by criteria pollutants. If the predicted ambient air concentrations are less than the secondary NAAQS, it can be presumed that emissions from the proposed sources will not result in harmful effects to either soil or vegetation.⁵¹ If the predicted ambient air concentrations of speciated compounds (e.g. speciated PM and speciated VOCs), if any, are acceptable per the Health Effects Evaluation (Tier I, II, or III), it can be presumed that the proposed sources will not result in an adverse effect on the environment, including soils and vegetation.

11.3 Visibility Impairment Analysis

The proposed Dorchester Cement Plant will be constructed in a Class II area. The proposed Dorchester Cement Plant will comply with the visibility and opacity requirements in 30 TAC Chapter 111, which satisfies visibility impairment analysis requirements for Class II areas.

11.4 PSD Class I Area Impact Analysis (Revised)

Class I areas are areas of the nation that are of special natural, scenic, recreational, or historic interest to the public, and are afforded protection under the PSD provisions of the Clean Air Act. Two principal air quality impacts are considered for Class I Areas: PSD increments for NO_x, SO₂, PM₁₀, and PM_{2.5}, and Air Quality Related Values (AQRV) including regional haze and acidic deposition.

⁵¹ U.S. EPA, Office of Air Quality Planning and Standards, New Source Review Workshop Manual, Research Triangle Park, NC, October 1990.

Date Received	Commentor	Correspondence Type	Comments Submitted Electronically
03/18/2024 2:02 PM	MOAYEDI, MEHRDAD	To Be Determined	MM Cottonwood 640, LLC and MM Cottonwood Phase 1, LLC are property owners in the general proximity of the proposed Portland Cement Plant as identified in the Amended Combined Notice of Public Meeting and Notice of Application and Preliminary Decision for an Air Quality Permit published February 12, 2024 (the "Project"). MM Cottonwood intends on developing its property for the use of approximately two thousand single-family residential lots, and in the future intends on purchasing additional land and developing approximately two thousand additional single-family residential lots. The Project would have extremely negative consequences for MM Cottonwood due to excessive air, water, and noise pollution. It is MM Cottonwood's understanding that there will also be blasts from mining operations, burning of coal, industrial and medical waste for fuel as a result of the Project. Given the extensive development MM Cottonwood intends on constructing, and the magnitude of residential living spaces to be developed on property near the Project, MM Cottonwood is opposed to the granting of the air quality permits requested in BM Dorchester, LLC's application.

COMMENTS: This comment is in addition to previous comments. It is crucial for the community, and its people that the following is part of the laws and regulations of federal and state and is required to be adhered to. The site is required to have air modeling of not only the kiln and crushers, but of the mining and quarry also. There has now been testing done approximately 150 feet from the Church and School property line and should be included in the modeling as such. The

air modeling also is required to show compliance and no health effects at a distance of approximately 600 feet from the kiln and crusher sites, as this is the historical site of the city plat and planning of residential area predating the application of the cement plant by years. See attachment for town plat. It is understood with Federal guidelines that the quarry be in the modeling also, and for the state to arbitrarily turn a blind eye and exempt this would cause gross negligence and some personal responsibility in my opinion as harm to the residents, businesses, city, and landowners that cannot use their land as previously planned and filed at the county courthouse. It has been established with a Public Information Inquiry the state does not have a Medical Professional that approved this beyond a federal guideline. If or when this is reviewed at a public meeting, this should be considered in any results as a deciding factor. This comment does not take the place or limit another comment.

COMMENTS: Additional reinforcing comment, as a community person, Mayor and Manager of local businesses, this applicant never fulfilled the posting requirement on site as required by TCEQ Rules and the application should be dismissed. It is thought that the TCEQ was misled in the applicant completing this necessary step. This comment does not take the place or limit another comment.

COMMENTS: Additional comment because of circumstance. I would like an explanation of the changing numbers of comments on the website. When viewing comments, they have been at a count of 180's, then 250's, then 340's, then to 180's, and now in the 150's. Is this a computer glitch?? A public information release should be done because it has been noticed by many on this application.

COMMENTS: This is an additional comment to previous comments. This application should be denied because in it's location, a very close approximately 2,000 ft north of an FDA Food Facility, it will effect the storage and safety of a food source that uses ambient cool and low humidity air to condition and maintain grain in storage. The Food Defense of the FDA would need to be involved in any studies of moisture emissions and what other emissions are involved. The grain is around 10% to 13% moisture and with the reported 20% water emissions of this facility, expected grain spoilage and other problems would be expected to exist. This facility stores enough wheat to manufacture 16,800,000 lbs of pasta, or around 18,000,000 pizzas, or 150,000,000 biscuits and/ or enough corn, that if it was a sole diet for a person, would feed approximately 20,000,000 people.

COMMENTS: I live one mile from the proposed BM Dorchester. I have a genetic lung condition that can be greatly affected by dust and chemicals that this will cause! I also run a business that can be affected as well. We also run cattle that will be affected. This plant will not only ruin my lungs that could cause my death as well as ruin the livelihood of our family business. I am just one of many that will be greatly affected if the permit gets approved. I hope based on the enormous responses by the Grayson County you will see that this does not need to happen. It will also affect the county growth and cause many problem in the county we live in. Thank you for your consideration of these comments!

COMMENTS: You could have chosen a desolate part of the country where there are thousands of acres and hardly a house. Instead, you have decided to build a harmful facility next door to one of the fastest growing cities in the U.S. Either I am missing something or your choice was made under the guise of hoping no one would discover it. Businesses overreach and this is an example of it. If this goes through, you will have blood on your hands as you fill the air with harmful chemicals. There are enough people in Celina, Gunter, and the surrounding communities that will band together and stop this operation. Where is the decency for mankind?

COMMENTS: I think this development is a great idea if you have zero care for other people and their well-being. It's an even better idea to encourage the young and the old to never step foot outside. Keep them locked up! Who needs to go outside and enjoy the sunshine and fresh air. Just keep those young kids inside on screens, the middle aged addicted to their work computers and the elderly alone and depressed. I think this will make for a wonderful future for the families that have long family roots of raising generations in the rural communities. Also wonderful for the new families that moved to this area to build their dream home, just to have their dreams crushed with life altering effects by just stepping foot outside for a family dinner on the porch or a day spent riding bikes. Being outside is just not what American families need anymore. They need to sacrifice their health, their generational land, their enjoyment of nature all so this company can sit in another town not affected by the quality of air and make millions. Seems fair. Squash the small so the big can succeed. So again great idea if you have zero care for human life and simply enjoy watching others suffer so you can take your family on that yacht vacation around the Caribbean.

Ms. Kelly Keel,
Executive Director Texas Commission on Environmental Quality
PO Box 13087 Austin, TX 78711-3087

Request for a Second Public Hearing

Ms. Keel:

I recently was made aware that there have been changes filed with TCEQ regarding the application for the proposed air quality permit numbers 167047 and PSDTX1602. If approved, these permits would authorize construction of the Portland Cement Plant near Dorchester, Texas. I have continued to be contacted by residents and stakeholders of the community who have voiced numerous concerns about the location and operation of this plant.

While I understand that a prior public hearing on this application has been held, I am respectfully asking for another public hearing to discuss the changes that have been made to the current application. It is crucial for the community to be informed and engaged in this decision-making process. A decision of this nature will impact the environment, traffic conditions, and the communities overall well-being. Due to the continued concerns of residents in the area and the changes made to the application, I feel it is necessary for the public to have another opportunity to ask questions and provide feedback.

Please contact Joshua Garrett in my office at 512-463-0297 if you have any questions or need to discuss further.

Best regards,

A handwritten signature in black ink, appearing to be "RS" or "Reggie Smith".

Opposition to the Black Mountain Cement Kiln

I am writing today on behalf of my constituents in strong opposition to the proposed plan for the construction of the Black Mountain Cement Kiln in Dorchester, TX.

Numerous constituents and business owners across Grayson County have reached out to me to voice their concerns about the dire consequences that this project will have on our community. The serious risks mentioned to me include pollution, adverse health effects, possible decreases in property values, damage to vegetation, and destruction to habitats for livestock and wildlife.

Along with the serious issues related to the effects that this project will have to nearby residents, I have heard concerns voiced by businesses in the surrounding area. The Sherman Economic Development Corporation, who also opposes the creation of this cement kiln, has brought to my attention the negative impact that seismic activity produced by the kiln will have on the growing tech industry in the surrounding area. The tech related businesses in Grayson County are vital to the success of our communities, the state, and the nation as a whole. We simply cannot jeopardize the work they do by choosing to place a cement kiln nearby.

Finally, concerns regarding the impacts from this cement kiln on the local water supply have also been brought to my attention. It is my belief that the proposed location of the Black Mountain Kiln in Dorchester could result in runoff contamination into the Choctaw watershed and Red River as well as the East Fork of the Trinity River and Lake Lavon. We cannot afford the risks associated with this planned project. We are at a time where water supply and infrastructure is already a concern across the state, this project could run the risk of further complicating a situation that we are currently working to address.

Texas House of Representatives

DELTA • FANNIN • FRANKLIN • GRAYSON

While I fully support economic growth and welcome new business in Grayson County, it is vital that we strategically plan any new project. We are a growing county, but it is important for us to grow in smart ways. We should not sacrifice the well being of our residents nor the interests of the already established businesses in our area for the benefit of one company. The quality of life for both residents who are new and those that have been here for generations must be our priority.

I look forward to working with TCEQ and our local residents, leaders, and businesses to see what solutions are available, but at this time I respectfully oppose this project.

Should you have any questions, please contact my office at 512-463-0297.

Sincerely,

A handwritten signature in black ink, appearing to be "RS" or a stylized "Reggie Smith".

COMMENTS: I am responding as a resident of Dorchester, TX. Myself along with my family live in a home less than 3000 feet from the proposed BM Dorchester site. I am very concerned for our health and am requesting that TCEQ investigate air quality and impact studies that have been done so far. The data used for BM site is from Denton, TX with a significantly different elevation (180 feet) which will lead to not only higher wind speeds but sustaining wind patterns spreading the products of the Kiln even further and wider throughout the county. There are four schools in the surrounding area. One of such schools is also less than 3000ft from the Kiln site. How can BM Dorchester verify they are meeting guidelines within safe and acceptable limits without accurate information obtained directly from the site? How can this inaccurate data provide accurate numbers and verify that BM Dorchester is within compliance for acceptable and healthy limits for its surrounding neighbors?

COMMENTS: My Mackey family owns land in Grayson County as early settlers of Dorchester. Martha White Mackey, whose parents were the early settlers, was my husband's Great Granny Mackey. This property is near and dear to our hearts. Grayson County is booming with diverse developments & expansions, banking on a very special, vibrant community environment. It would be devastating to allow a limestone mining kiln in the middle of this promising area. Obviously Dorchester was very appealing to the homesteaders for a reason. Please reject this permit and protect the people and lives in Dorchester as well as Grayson county.

COMMENTS: As a property owner in both Sherman, Texas and Gunter, Texas, I am strongly against this proposal. Gunter is already experiencing problems with their water supply. This proposal would be detrimental to the growth in this area. The roads are not sufficient to accompany increased heavy truck traffic as well. There are so many reasons why this project is not needed in this are, pollution, livestock, ground water, etc. This proposal needs to be rejected immediately.

COMMENTS: We do not need or want dirty industry this close to homes, schools, and other businesses. These corridors of Hwy 75 and 289 could very well develop into the Semi Valley of Texas but the pollution caused by BM could put a stop to that completely. These semiconductor companies rely on clean environments to produce. They provide safer, higher paying jobs than BM will. And as important as those reasons are for saying no to BM, they come in a distant second to the health and well being of our families. Just when Sherman has begun changing it's trajectory by reclaiming the best parts of itself- being a blue collar town with clean industrial jobs and a high standard of living- it seems that it and

surrounding communities have a decision to make. I hope most of Grayson County shows up at Hilton Garden next Monday to make their voices heard.

March 21, 2024

Jon Niermann, Chairman
Texas Commission on Environmental Quality
12100 Park 35 Circle
Austin, TX 78753

Chairman Niermann:

RE: Permit Number 167047

I write to you today to express my urgent plea for the Texas Commission on Environmental Quality (TCEQ) to reject Permit Number 167047, which M Dorchester LLC has applied for to establish a cement mine in Grayson County (Black Mountain). My concerns regarding Black Mountain extend beyond the already well-known adverse consequences of cement mining, which encompass the release of dust particles linked to severe health issues like lung cancer, heart disease, stroke, and reproductive complications, as well as the increased gravel transport traffic that could jeopardize road safety and lengthen travel durations. Black Mountain significantly intensifies the usual concerns associated with cement mining and its impact on the local community, Texas's larger economic framework, and the nation's national security.

The proposed site's proximity to significant economic ventures, including GlobalWafer's \$5 billion chipmaking project and Texas Instruments' \$30 billion semiconductor manufacturing facility, underscores the risk of Black Mountain. These projects represent a historical stride in Texas's economic development and the nation's attempt to become technologically independent from chip manufacturers in China. The potential disruption from dust and seismic activities posed by the mine could endanger these historic critical investments and the economic and national security of numerous Texans and U.S. citizens, extending beyond Grayson County.

At a local level, the threat is amplified by the mine's proximity to residential areas, with 3,500 homes plated within a mile and an additional 20,000 residents having homes plated within three miles. A TCEQ environmental investigator noted substantial risks of nuisance and odor, accentuated by the mine's proximity to a church, a business, and residential locales. Such proximity could expose homeowners to notable environmental hazards and diminish property values by up to 20%.

It is also important to note that cement, unlike concrete, does not require proximity to its point of use. Therefore, any argument for situating the mine in a densely populated area, such as Grayson County, home to approximately 140,000 people and rapidly growing as an economically significant area, is negated. The county's population is burgeoning, emphasizing the paradox of this location choice compared to more suitable, less developed regions of Texas that have traditionally hosted cement mines and mitigated associated impacts.

CAPITOL OFFICE:
Room LL 706
PO, Box 12068
Austin, Texas 78711
(512) 463-0130

Drew.Springer@Senate.Texas.Gov

DISTRICT OFFICE:
DENTON SQUARE BUSINESS CENTER
725 S-435 EAST, SUITE 222
DENTON, TX 76205
(940) 323-9358
01638

Given these pressing concerns, I strongly request that TCEQ deny Permit Number 167047 to protect our community, our environment, and our state's economic trajectory. We are at a critical crossroads, with the potential to nurture an environment that supports significant economic endeavors and sustainable living. Approving Black Mountain would conflict with these goals and signal a troubling precedent for future developments.

Thank you for considering these vital issues. I trust that the Commission will decide to protect our community's health, environmental integrity, and economic well-being.

Respectfully Submitted,

A handwritten signature in black ink, appearing to read "Drew Springer". The signature is fluid and cursive, with the first name "Drew" and last name "Springer" clearly distinguishable.

COMMENTS: I strongly oppose the granting of this permit. There are inherent health risks associated with this proposal. First Baptist Dorchester hosts our homeschool co-op which we attend weekly. If this plant was allowed to go forward, the 200 people who attend with us would be forced to go somewhere else because how could we allow our children to play outside with air pollution produce just feet away. Our home would also be affected by the expected air pollution due to the heavy winds we experience in this area.(I Imagine you waking up on a random Thursday to a thin line of dust on your car, or your kids playing outside during a day that the wind happens to be blowing in your direction. Imagine the impact of these toxic chemicals seeping into your well water and the large amount of water the concrete plant will be using, drawn away from public use of citizens to this plant ... all to keep the business going. Imagine the noise pollution from setting off explosive charges and the light pollution needed to operate late at night. Respectfully, we ask that you don't allow this to be permitted. It would be a disservice to the community and the environment. Thank you for your consideration.

COMMENTS: I reside within 1/4 mile of the church and the proposed plant. I have COPD and other respiratory problems. I need clean air to breath. I just spent 15 days in the hospital. We have worked to make this our home and don't need a lot of trucks kicking up dust and dirt around us. find an uninhabited place to put your plant. This has been my home all of my life and I don't want to be run out.

COMMENTS: Please deny this. We don't need this in Grayson County. It would destroy our church and our community, The air and out crops along with our water. I have lived here all of my life and want to keep the farmers busy. I have breathing problems and would like to keep the air clean. I had a stroke Feb 6, 2023 and sudden noises like blasting are not good for me. The truck traffic is already bad enough without adding to it. I've been in this church all my life and want to see it continue. Please, PLease, PLEASE deny this permit.

Re BM Dorchester Application for Permit 167047
 I am Robert Stewart 1177 Rockport Rd Phone # 903 436 2744 Cell
 Sherman TX 75092 Office 903 893 1570

I have asthma and I am on Oxy 724. Since we live just north of the proposed Cement Plant the southwest trade winds will go right over my whole farm and effect us with the particulates and acid rain falling on us and our well being. I expect this to damage the window and door screens, and even damage my metal barn and shop.

business, our farm equipment, cars, trucks and the health of my retired employees. An alternative might be if the Cement Plant owner would find another farm of 100 acres similar to what I have now and move my home and business on it. We shop at the Walmart grocery store so this move needs to be no more than 10 miles from the grocery store.

Note: a 500 acre farm about 1 mile across from me sold for 15 Million Cash (The Stewart Home Farm.)

Thank you

Sincerely,
 Robert Stewart

I am Robert Stewart at 1171 Rockport Road, Sherman, Tx. 75092. We live ½ mile due-north of Cement Plant Property; that consists of our farm of 100 acres. This farm was purchased in 1961 and we have lived here for 60 years. We have a successful business hiring mostly retired employees to learn the technique and skills needed to produce fabricated products that we sell in the US, Canada and Alaska. Our business of fabrication consists of approximately 15,000 square feet of buildings, our home just south of business has a large, electric automatic start Generator, 4 bath rooms, and 3900 living space. I have asthma and this is a very serious health risk.

Dear ROBERT STEWART,

This is to inform you that your most recent lung function studies showed mild asthma and marked restrictive lung disease. The former may be impacted by environmental exposures but the latter is not likely to worsen unless you are exposed to harmful chemicals that can affect lung function. For example, (in high concentration) oxides of nitrogen, sulfur, and sulfur, ozone, gasoline vapor, benzene, ammonia, and chlorine can cause lung damage.

You may share this with whomsoever you deem necessary in order to prevent environmental exposures to harmful chemicals.

I look forward to seeing you at your next scheduled visit.

Sincerely,

/es/ Cheryl-Ann Monteiro, MBBS MPH FACF

STOP THE PROPOSED DORCHESTER LIMESTONE MINING/CEMENT PLANT

North of Hwy 289/FM 902/Taylor Rd/Morman Grove Rd/Old Dorchester Rd

Impacting Your Community as well as Howe, S&S, & Sherman School Districts

It has recently come to our attention that a company named **BM DORCHESTER LLC (Black Mountain Dorchester)** is planning to build a **600+ acre limestone mining/cement plant DIRECTLY beside and behind First Baptist Church Dorchester on FM 902, down Taylor Road to Morman Grove Road and around to Old Dorchester Road.**

Time is of the essence, and **OUR COMMUNITY MUST ACT NOW IF WE ARE TO HAVE A CHANCE AT STOPPING THIS DEVELOPMENT!** With your input and support we are hopeful our community can derail this plan that will **DIRECTLY IMPACT YOU, YOUR FAMILY, AND YOUR LAND.** Their application is not yet complete; however, here is what we know.

Regulated Entity Name:

DORCHESTER PLANT

RN Number:

RN111368437

TCEQ Permit No.:

167047

TCEQ Docket No:

County:

GRAYSON

Principal Name:

BM DORCHESTER LLC , CN605952373

No notifications will be sent out until the application is administratively complete. Then a Public Notice will be sent out for local input. **We want to be ready! WE NEED YOU TO COMMENT ON THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY (TCEQ) WEBSITE** expressing OUR objection to this company building in OUR neighborhood. Make sure your comments include concerns about air quality as well as any other objections you may have. **This facility will emit the following contaminants: carbon monoxide, hazardous air pollutants, sulfuric acid, nitrogen oxides, organic compounds, particulate matter including particulate matter with diameters of 10 microns or less and 2.5 microns or less, lead, and sulfur dioxide.** All comments are reviewed and shared with the prospective builder. You, your friends, family... All can comment. Once there is a significant public concern and enough requests for a public meeting, there will be one held. In addition, should a State Representative request a public meeting, one must be held.

Reggie Smith, District 62, Texas House of Representatives – 512.463.0297 or 903.891.7297

reggie@reggiesmithfortexashouse.com

Drew Springer, District 30, Texas State Senator – 512.463.0130

WE HAVE TO ACT NOW!

Below are the steps for making your objection:

1. Go to the below website link in step #2
2. <https://www.tceq.texas.gov/agency/decisions/cc/comments.html>
3. You will click on the button **“Comment online about pending permit applications”**
4. Enter the Application number. Enter this number **167047**
5. Select NEXT.
6. Enter requested information and your comments.
7. Press Submit to TCEQ. Your comments have now been submitted.
8. Now get your friends and relatives to do the same.
9. You may also call the Public Education Program at 1-800-687-4040.

To date there are no signs posted yet for public comment, but once this occurs the window of time is small to protest. Please comment as soon as possible on the website above. **DON'T WAIT! DO IT TODAY!** In addition, you may contact our local officials to express your concerns and garner their support for our efforts to stop this development.

Phyllis James, Pct 3 County Commissioner - jamesp@co.grayson.tx.us or 903.813.4317 office

Jeff Whitmire, Pct 1 County Commissioner - whitmirej@co.grayson.tx.us or 903.893.2033 office

Bill Magers, Grayson County Judge - bmagers@co.grayson.tx.us or 903.813.4228 office

Obvious concerns include:

- Decreased quality of country living
- Health risks to all citizens – Do you know any one with Asthma or breathing conditions?
- Excessive noise pollution
- Decreased property values
- 24-hour a day lighting pollution
- Air pollution – Dust, fuel and chemicals including sulfuric acid, nitrogen oxides, and carbon monoxide
- Excessive draw on the water table – Dorchester is currently home to wells that supply Sherman, Dorchester, Howe, and Gunter populations. With existing water concerns, this WILL affect our water supply!
- Health risks to livestock and wildlife
- Heavy industrial traffic on our neighborhood roads
- Commercial traffic will never stop – Semi loads of equipment and materials will destroy our roads and highways including FM 902, Hwy 289, and too many county roads to list.

Detailed concerns include:

- **Ground Water** - Limestone mining can affect ground water conditions. Limestone deposits often occur. The deposits result in sinkholes, caves and areas of rock fractures that form underground drainage areas. When mining occurs, disruption to natural aquifers, or flows of underground water, can result. Often, mining operations remove ground water to expose the quarrying site, which can lower the water table and change how water flows through the rock formations.
- **Surface Water** - Streams and rivers can be altered when mines pump excess water from a limestone quarry into downstream natural channels. This increases the danger of flooding, and any pollutants or changes in water quality affects the surface water. Upstream surface water features, such as marshes, ponds and wetlands, can lose volume as their waters drain into the mine and are pumped out.
- **Sinkholes** - As water and rock are removed from mines, the support they give to underground features is gone. Sinkholes can develop, where the roofs of underground caverns are weakened or collapse. Collapse can be gradual or sudden.
- **Blasting and Construction** - Limestone mines use two types of blasting. Small explosive charges set along drilled lines free blocks of stone to be removed for construction. Large charges reduce whole areas of limestone to rubble, which is removed for use as crushed stone. The noise, dust, and impact from explosions can result in noise pollution and dust. Underground forces from the blasts can cause sinkholes or change the drainage and water quality of underground aquifers. Construction equipment, such as large trucks, crushing machines and earth-moving equipment, also contribute to noise and dust.

SPEAK UP NOW! LET YOUR VOICE BE HEARD!

COMMUNITY PRAYER RALLY AT THE

FIRST BAPTIST CHURCH DORCHESTER ON DECEMBER 1, 8, AND 15TH AT 6:30 PM.

Often, mining operations remove ground water to expose the quarrying site, which can lower the water table and change how water flows through the rock formations.
- **Surface Water** - Streams and rivers can be altered when mines pump excess water from a limestone quarry into downstream natural channels. This increases the danger of flooding, and any pollutants or changes in water quality affects the surface water. Upstream surface water features, such as marshes, ponds and wetlands, can lose volume as their waters drain into the mine and are pumped out.
- **Sinkholes** - As water and rock are removed from mines, the support they give to underground features is gone. Sinkholes can develop, where the roofs of underground caverns are weakened or collapse. Collapse can be gradual or sudden.
- **Blasting and Construction** - Limestone mines use two types of blasting. Small explosive charges set along drilled lines free blocks of stone to be removed for construction. Large charges reduce whole areas of limestone to rubble, which is removed for use as crushed stone. The noise, dust, and impact from explosions can result in noise pollution and dust. Underground forces from the blasts can cause sinkholes or change the drainage and water quality of underground aquifers. Construction equipment, such as large trucks, crushing machines and earth-moving equipment, also contribute to noise and dust.

SPEAK UP NOW! LET YOUR VOICE BE HEARD!

COMMENTS: Black Mountain has no experience running a concrete plant (statement by rep at 25MAR24 at Denison TX public comment event) AND this permit has special requirements to barely satisfy attainment zone for ozone/NOX (statement by TCEQ staff at same event), therefore you have a guaranteed failure when your novice operator comes up against a hard limit. In this situation, conventionally you would require the novice OWNER to hire an experienced OPERATING COMPANY that has documented performance. Do that.

COMMENTS: I work for a concrete company & I do not think a cement mill should be placed in Dorchester. The roads are suitable for tanker trucks along with all the raw materials haulers. Having asthma also concerns me with breathing in the dust when the trucks are being loaded. Our cement company employees do not drive new cars to work due to dust covering their cars. There are new subdivisions coming to the area along with schools. The plant would be better suited where there are no homes, schools and farming.

COMMENTS: See attached file titles "Permit Opposition"

Good afternoon,

I want to protest the pending permit application 167047 – Black Mountain Cement Facility. I cannot understand why locating a project of this magnitude anywhere near residential areas would even be considered. The radius of the pollution from this project will affect many families. My family moved from a polluted state because we wanted better for our young children (6 years, 2 years, and 3 months). The past two years we have lived in Grayson County have been a dream come true; we've had beautiful blue skies and clean air. Since we've moved here, we spend the majority of our time outside. This plant will ruin Grayson County and the things that make it beautiful. Many families I have spoken to about this project have stated that if it is approved, they will feel they have no other choice but to relocate for the health and safety of their children.

I've done two overseas tours with the US Army, and I can personally tell/show you the negative impacts of airborne hazards on a person's health. The impact on children will be greater. The Safety Data Sheet and GHS label specifically state that cement kiln dust can cause skin irritation, respiratory irritation, and cancer. Please do not let this company jeopardize our children's health.

A recent study showed the following:

"Cement industries are largely responsible for releasing air pollutants and effluents into water bodies with apparent water quality deterioration over the years. Air pollution from lime and cement-producing plants is seen as a severe instigator of occupational health hazards and work-related life threats, negatively affecting crop yields, buildings, and persons residing in the vicinity of these industries. World Bank observed in 2015 that 94% of the Nigerian populace is susceptible to air pollutants that surpass WHO guidelines. In 2017, World Bank further reported that 49,100 premature deaths emanated from atmospheric PM2.5, with children beneath age 5 having the greatest vulnerability owing to lower respiratory infections, thereby representing approximately 60% of overall PM2.5-induced deaths. Cement manufacturing involves the significant production of SO₂, NO_x, and CO connected to adverse health effects on humans. Sensitive populations such as infants, the aged, and persons having underlying respiratory ailments like asthmatics, emphysema, or bronchitis are seen to be most affected." (Source: Etim, Mmemek-Abasi, Kunle Babaremu, Justin Lazarus, and David Omole. 2021. "Health Risk and Environmental Assessment of Cement Production in Nigeria" *Atmosphere* 12, no. 9: 1111. <https://doi.org/10.3390/atmos12091111>)

Another study concluded that there is "an association between the exposure to the cement plant emissions and the risk of hospital admission for cardiovascular or respiratory causes, particularly strong for children. The cement plant certainly has an important role as a producer of air pollution." (Source: Martina Bertoldi, Alessandro Borgini, Andrea Tittarelli, Elena Fattore, Alessandro Cau, Roberto Fanelli, Paolo Crosignani. Health effects for the population living near a cement plant: An epidemiological assessment. *Environment International*, Volume 41, 2012, Pages 1-7, ISSN 0160-4120, <https://doi.org/10.1016/j.envint.2011.12.005>.)

Please do not allow this facility to be built right in our backyard, bringing with it the many negative health outcomes for our children.

Respectfully,

Crystal Stueve

COMMENTS: My land is 82 acres directly immediate south of the proposed plant. We will have single family housing community in our land. It is crucial for the community, and its people that the following is part of the laws and regulations of federal and state and is required to be adhered to. The site is required to have air modeling of not only the kiln and crushers, but of the mining and quarry also. There has now been testing done approximately 150 feet from the Church and School property line and should be included in the modeling as such. The air modeling also is required to

show compliance and no health effects at a distance of approximately 600 feet from the kiln and crusher sites, as this is the historical site of the city plat and planning of residential area predating the application of the cement plant by years. See attachment for town plat. It is understood with Federal guidelines that the quarry be in the modeling also, and for the state to arbitrarily turn a blind eye and exempt this would cause gross negligence and some personal responsibility in my opinion as harm to the residents, businesses, city, and landowners that cannot use their land as previously planned and filed at the county courthouse. It has been established with a Public Information Inquiry the state does not have a Medical Professional that approved this beyond a federal guideline. If or when this is reviewed at a public meeting, this should be considered in any results as a deciding factor. This comment does not take the place or limit another comment.

COMMENTS: We live just north of this proposed plant and would be directly in the path of prevailing winds that would blow a constant source of all the pollutants from this facility to our home. We have lived here our whole life and finally retired and ready to enjoy LIFE at our home. We DO NOT WANT the pollution, noise, traffic, or disruption to the country lifestyle that we and all of our neighbors moved here for in the first place. This is a residential area NOT a manufacturing area. Keep the air pollution and water pollution and all the associated health problems out of our area.

COMMENTS: We have lived in Dorchester TX most of our adult life. We are now retired hear. We moved hear because of the peaceful nature of this community. Quite clean fresh air and low traffic. Now that we are retired we spend a lot of time in our back yard with family during cookouts. Non of the people in this area moved hear because they wanted the pollution/noise/traffic/damage to roadways from heavy equipment/eye sore of a cement kiln and limestone mining operation. Non of us want our water supply to be polluted from blasting and leaching of pollutants into the water source nearby. Non of us want to get respiratory diseases like silicosis or any other respiratory disease related to this kiln. We do not want our homes our crops or livestock contaminated with toxins from this limestone mining kiln. WE HIGHLY OPPOSE of the Limestone mining kiln being built in this area.

COMMENTS: Please do not build this cement plant in this area as it will impact Grayson county residents from all that is required to run such a plant. It's going to affect people's health, homes, churches, and farming land. It isn't just where the plant sits it is how it impacts the air quality around the surrounding areas. The environment is more important than money. Stop taking over the lives that have made this area their home. Think of the future children that could endure health issues from this plant!

COMMENTS: WE ADAMANTLY OPPOSE THIS APPLICATION! LETTER ATTACHED.

This is a letter of complaint for the pending permit 167047.

July 23, 2024

We are adamantly opposed to the application to TCEQ for the permission to construct and operate a cement kiln and associated mining operation by BM-Dorchester.

Our Taylor Farm lies along the entire eastern border of Dorchester, Texas.

It is located along the east side of Mackey road and consists of over 106 acres of land. The address: 11451 FM 902, Dorchester, TX 75459.

Several of our family members live on or near this property and are very concerned about the environmental scar this company's planned installation would bring upon our town.

We join interested parties in Sherman, Howe and the town of Dorchester in pointing out the detrimental atmosphere this enterprise would bring to this area. Based on similar installations throughout the state of Texas, we believe that the dirt, dust, explosive vibrations and increased industrial road traffic that result from similar installations would bring ruin to our environment and serious destruction to our highways and streets.

Manufacturing companies like Texas Instruments have complained about the adverse effect this installation would cause to their computer

chip making process because of explosive vibrations and air quality made poor due to cement kiln and mining operations so near their plant. Our children's health would be affected because of poor air quality, noise, dust and constant chaos associated with mining and manufacturing operations.

We also worry about the risk created by the expected height of the Kiln plant. We have a local airport located on Belden Road that would be adversely affected by obstacles to flight if this company is allowed to build their proposed plant. Never mind the hazard created by the reduction in visibility that this industrial process would create.

In short, we feel NIMBY (Not in my backyard). Numerous other industrial companies have proposed projects in and near our community, but none so egregious as this proposed by BM-Dorchester.

COMMENTS: I am highly opposed to the planned Cement Plant and Limestone mining operation to be located on North side of Dorchester bounded by: Taylor Road on the west, Colonel Hall Road on north, Old Dorchester Road on the east and FM 902 on the south. I was born in 1943 and lived my entire life until college age on the Taylor Dairy Farm, a 106acre farm that farm that is the eastern boundary of the town of Dorchester. The proposed mining operation would be a blight on the story of Dorchester and it's people. Dorchester has been a bustling location since the early 1900's. It

once had stores, a bank, a Public elementary school with a high school. It is home to the Dorchester Baptist Church and has been for many decades. The very idea of a strip-mining operation that consumes about a Section of our land is repugnant. Heavy earth moving equipment, heavy trucks, endless dust and dirt, and the constant damage to all of the surrounding roads is not a future that I would tolerate in my hometown! Please make every effort to deny this application.

FAX:

COMMENTS: We are totally opposed to the Kiln cement plant and mining operation proposed by BM-Dorchester and listed in permit application # 167047.

This is a letter of complaint for the pending permit 167047.

We are adamantly opposed to the application to TCEQ for the permission to construct and operate a cement kiln and associated mining operation by BM-Dorchester.

Our Taylor Farm lies along the entire eastern border of Dorchester, Texas.

It is located along the east side of Mackey road and consists of over 106 acres of land. The address: 11451 FM 902, Dorchester, TX 75459.

Several of our family members live on or near this property and are very concerned about the environmental scar this company's planned installation would bring upon our town.

We join interested parties in Sherman, Howe and the town of Dorchester in pointing out the detrimental atmosphere this enterprise would bring to this area. Based on similar installations throughout the state of Texas, we believe that the dirt, dust, explosive vibrations and increased industrial road traffic that result from similar installations would bring ruin to our environment and serious destruction to our highways and streets.

Manufacturing companies like Texas Instruments have complained about the adverse effect this installation would cause to their computer chip making process because of explosive vibrations and air quality

made poor due to cement kiln and mining operations so near their plant. Our children's health would be affected because of poor air quality, noise, dust and constant chaos associated with mining and manufacturing operations.

We also worry about the risk created by the expected height of the Kiln plant. We have a local airport located on Belden Road that would be adversely affected by obstacles to flight if this company is allowed to build their proposed plant. Never mind the hazard created by the reduction in visibility that this industrial process would create.

In short, we feel NIMBY (Not in my backyard). Numerous other industrial companies have proposed projects in and near our community, but none so egregious as this proposed by BM-Dorchester.

COMMENTS: The Black Mountain Propaganda Video on their "about us" page mentions their commitment to using state-of-the-art equipment to reduce carbon footprint by "limiting limestone sent through a kiln". However, specific details about the equipment or methods to limit limestone are not provided, instead focusing on positive remarks about Texas. Upon reviewing their permit, the emissions proposed appear to be on par with other cement plants known for pollution. How does Black Mountain plan to lower emissions and reduce their carbon footprint with outdated technologies and a new scrubber? Is there a dedicated research and development team exploring innovative technologies to differentiate themselves? Their website lacks a detailed plan beyond praising Texas and vague promises to minimize pollution. How exactly will Black Mountain fulfill their website claims? Where is their detailed strategy to preserve the beauty of Dorchester and keep Grayson County free from pollutants, akin to the issues faced in Midlothian, TX?

COMMENTS: My name is Shawn Teamann. I am a business owner that has 3 Grayson County locations. I own 6 properties (within a few miles of the proposed site), and I am currently serving as the Deputy Mayor for the City Of Sherman. I am strongly opposed to this application. The City Of Sherman in recent years has become widely known for it's industrial developments. Texas Instruments, Global Wafers, and Coherent, which have all made national news for recently choosing Grayson County and Sherman to call home, are within the cities designated Blalock Industrial Park. The Blalock Industrial park is only a few miles away from the proposed site of the kiln. These leaders in the technology space rely heavily upon air quality, water quality, and stable soil conditions in their processes. The slightest deviation in any of those aspects could have a catastrophic effect to their production and possibly make the locations futile. This kiln will without a doubt will have an effect on all three of these factors. The Federal Government, the State Of Texas, and the City of Sherman have all made sizable investments in these industries to ensure their success and the success of our community. The city of Sherman is one of the main water suppliers in the area. The city operates it's own water treatment plant and 9 wells. The particulates that will be released in the air and the chemicals elements that will be used in the process of producing cement could have a detrimental effect on ground and surface water. The proximity of this proposed site to Sherman's industrial park, school system, and residences is not feasible. The blasting processes into the bedrock of our community, just a few short miles from these major industries could cause a halt in production and have a catastrophic financial consequence for all parties. The health risks and potential for air and water contamination associated with this cement kiln, has no place in one of the fastest growing areas in the state. To approve the application for this site, would be a huge mistake. I implore you to deny this application.

COMMENTS: I am in writing in opposition for the Limestone Mining Kiln in Dorchester. As a concern citizen, I believe that allowing such a development would have detrimental effects on our environment, health, and quality of life. The emissions generated by the cement manufacturing process, including particle matter, sulfur dioxide, and nitrogen oxides, pose serious threats to air quality and public health. It also raises concerns about water usage and contamination. Limestone mining also requires large amounts of water, which could strain local water sources. I urge the TCEQ to carefully consider the potential impacts of this proposed project and to prioritize the health and well-being of our community.

COMMENTS: I strongly oppose the granting of this permit. There are inherent health risks associated with this proposal. We are one of the heaviest wind zones in Texas, which comes into serious play with the distribution of these chemicals. The winds mostly blow northwest and northeast (according to the NOAA wind data). Imagine you waking up on a random Thursday to a thin line of dust on your car, or your kids playing outside during a day that the wind happens to be blowing in your direction. Imagine the impact of these toxic chemicals seeping into your well water and the large amount of water the concrete plant will be using, drawn away from public use of citizens to this plant ... all to keep the business going. Imagine the noise pollution from setting off explosive charges and the light pollution needed to operate

late at night. Respectfully, we ask that you don't allow this to be permitted. It would be a disservice to the community and the environment. Thank you for your consideration.

PHONE: 9032676227

FAX:

COMMENTS: TCF Show Cattle operates about 7 miles to the east of this proposed plant. Our operation raises pure bred Hereford cattle and have been doing so since 1984 in our rural community. As owner of this operation, I have serious concerns regarding the dust and pollution the cement kiln will produce. This will have an effect on the cattle and create potential respiratory issues. This will result in ill cattle and loss of pounds which is ultimately revenue. Aside from the pollution concerns, we are also concerned with the blasting and the effects of loud sudden noises on the cattle. This also generates additional stress that will result in loss of appetite, pounds, and revenue. The road infrastructure in this area is not maintained enough to handle the approximate 100 semi trucks a day. Our community is a strong rural area with abundant and successful livestock and horticulture farms and ranches. We do not wish to see the land and air destroyed and polluted through this process. We have bald eagles that live in this area as well. We have concerns of the negative impact to the environment, property values, and quality of life with the installation of the plant. Thank you.

COMMENTS: TCF Show Cattle is located 2.4 miles from the proposed kiln by Black Mountain Group. Studies completed in the past as to air quality for this permit location were not done correctly and were based off Denton county versus actual here in Grayson county. The elevation and wind are not the same. My concerns with this plant continue to grow the more I read about kilns and what they due to the local environment. Studies have shown in areas where kilns are operating particulates in the air cause several breathing issues in humans and animals. Further research provided from people around kilns in Midlothian, have seen difficulty in getting their livestock to breed and maintain pregnancy to term. This now affects the livelihood of my family. Raising quality Hereford beef is something we have done for over 30

years on our family farm. Particulates will not only impact our rate of offspring but quality of organic meats for sale from our operation. Property values around this site will reduce greatly continuing to negatively impact my economic capabilities of our farm and family. Grayson county produces 2.4 million bushels of wheat a year into our food and feed supply. It is a very rural community situated right outside our new silicon prairie. The overall negative impact to our community outweighs the approval of this permit due to the air quality it would provide. Lastly this area is the winter nesting grounds to bald eagles and the Haggerman wildlife refuge and bird sanctuary which houses millions of migratory birds every year.

COMMENTS: I do not believe the air quality will stay at its current cleanliness level with this plant being introduced and built. My wife and I live less than 3 miles from the plant. My household is against this concrete plant being introduced.

COMMENTS: This community is a longstanding farming and ranching area. The toxins and dust that this plant will create will negatively impact the cattle being raised, the agriculture that is being produced and the health and well being of our citizens. I have family near a company smaller than this and it has caused many health issues and the dust that is created has caused many breathing issues for many in that city. We do not want a company as this to come in and wreck our

community and tear up roads and disturb the peace. I ADAMANTLY OPPOSE THIS PLANT. PLEASE DO NOT APPROVE THIS APPLICATION!!!!!!!

COMMENTS: I adamantly oppose this facility being proposed. The air quality is already affected by the batch plant off Wall Street in Grayson county. I cannot comprehend how this would even be considered. The families, men, women, children, elderly and especially anyone with respiratory issues would be directly at risk. This is still a rural area and farming and cattle is a way of life that would be greatly affected. Other industrial sites are trying to move in as well and those are being opposed also (BNSF)!!!! My quality of life and home value will be directly at risk. I complained several years ago about this proposition and still oppose!!!!

COMMENTS: Strongly AGAINST this permit. Will ruin Economic Development and growth in our area. Will be harmful to our Environment and subsequently the health of our communities, including a major high school in Sherman that was recently built. Is right next door to a church in Dorchester. The seismic activity will be harmful to our manufacturing industry. Please VOTE NO.

FAX:

COMMENTS: Dorchester has been a farming community since conception. The proposed concrete industry is not compatible with farming or ranching. Dorchester, Grayson county, nor all of north Texas has no need for this pollution, noise, traffic congestion, health hazards and a myriad of other issues this plant will bring. This plant have a negative impact on all of North Texas and southern Oklahoma until the end of time. There will be no going back, no changing the damage, nothing can be undone. Our family has been in Dorchester for 5 generations, we want it healthily habitable for the next 5.

COMMENTS: Dorchester Texas is a lovely farming community that my family has been a part of for generations. This proposed limestone/cement plant has the potential for compromising the health of future generations in the entire area with emission of hazardous air pollutants. The proposed site actually encroaches on several family members property which will depreciate not only their property values, but all of Dorchester and miles around. This will change the whole complexion of the area. Dorchester will become a dust covered concrete plant slum. I drive Hwy 289 and FM 902

frequently. These 2 lane roads will become much more dangerous and hazardous with concrete trucks and diesels of this magnitude on these narrow roads. There are many other sites available in north Texas without a town, family homes and busy roads in such close proximity.

COMMENTS: This planned project will change the entire landscape of Dorchester and surrounding areas of Grayson County. The families living in the area as well as farming and livestock will be jeopardized. This is too close to families and the community to be tolerable. The dust, the noise, the kiln, the trucks are not inline with what we want in Grayson county. Five to ten years from now Dorchester will look like a ghost town from all the damage caused. Move on to west Texas where there are greater expanses of land not affecting persons and their livelihoods.

COMMENTS: This lovely farming community/up and coming residential community will be destroyed by a cement plant in this proximity. The emissions and dirt have the potential to cover the entire area. Families should not have to concern themselves with health conditions associated with breathing smelt/smog filled air. There is potential for asthma, COPD, lung cancer, pulmonary fibrosis, black lung, chronic sinusitis and associated ear problems. Hwy 289 and FM 902 are too narrow for this capacity of large trucks This creates extreme driving hazards for anyone traveling this route.

COMMENTS: I am opposed to this project because the waste from their plant will impact and degrade the health of my children, myself and ruin our quality of life in Grayson County. It will also ruin the life of animals in the area, in Lake Texoma and in the air. This is a community health issue, and if our public representatives really care about the people, they will oppose this as well. If they don't it will clearly be about greed. The growth in the area is already about greed, not the quality of the people. I DO NOT SUPPORT THIS PROJECT.

COMMENTS: I have a few concerns with this, the first one being one of my children and her severe breathing issues she faces even as a young child still and how much this will affect her. We have friends in family living closer to this location then we do but even with us living not to much farther away I am concerned as a parent for the air quality and her breathing since we do spend a lot of time near this location in church or visiting friends and family. My next concern is how it will affect the living around this area, there are many farmers and people who are accustomed to rural living and

need this land for their daily way of life. This company being brought to this area just doesn't seem fitting for a good location due to the rural living, churches, schools, and residential houses. People have moved to this area due to it not having big businesses and we have a small town love for everything around us. Most elderly people have been in this location for many years as well so how will this affect the air quality as well?

COMMENTS: Dear Sirs: I would like to voice my concerns once again over the building of a cement plant in Dorchester Texas. I have lived here for 34 years with my husband. We have lived in this beautiful, peaceful part of North Texas with good air quality, good water and able to have a garden. My husband has worked for Texas Instruments and now works for Globitech. I have retired and he plans to retire in the next couple of years. We have worked our entire lives for this small home and piece of land that we plan

to enjoy our golden years on. I highly object to a cement plant coming and disrupting the livelihoods and air and water quality for people, animals and crops in the Dorchester community. I sent an objection letter before and received a letter back that it would not change the air quality that much. I do not believe that. I also fear the cement plant would disrupt new business in Sherman like the Global wafers plant. This whole part of North Texas is about to explode in growth and a cement would not entice people to move here. I ask respectfully, please send the cement plant somewhere else. Respectfully, Marilyn Vest

COMMENTS: Hello, I live on Taylor Rd exactly where this proposed plant is to come. We have cattle and have other livestock. Anytime it rains or floods the field where this is proposed going drains into our lake and creeks, we actually had to rent mini dozer to dig the creeks out from all the dirt from field across road to clean out for drainage. I also attend FBC Dorchester for the last 36 years, the church has been there over 100 years. I cannot see how we can even continue to have church or expect a pastor and family to live there with all the deadly chemicals in air, not even to

mention noise, and traffic which will be deadly around the curve going towards Hwy 75 and over RR crossing and Hwy 289. There is a school that meets at the church each week also. I also work for City of Dorchester, we serve customers with water, can't imagine what will do to our ground water and wells. I know my customers they become like family and so many with breathing, heart, cancer, other diseases, too many to mention health issues. For most they will not be able to up and move, this is home. Customers have already called in tears saying if this should come they will surely die from the air quality. The years I have worked for City, I really thought TCEQ had customers best interest in keeping water safe for consumption, and the air. I am seeing a different side and I really don't know how you sleep at night knowing what you know about the deadly side effects this would cause to a community and entire County, and actually close a church! WE are praying for each of you, this did not take God by surprise, I don't know what tomorrow holds, but I Know He does! He has always been faithful to FBC Dorchester, and I have faith He will continue no matter the outcome, I will give Him Praise always! May each of you have a Merry Christmas! He is the reason for the season! I pray you know Him as your Savior, He is coming back one day! And He is the ONLY way to Heaven!

COMMENTS: I am very concerned about what is proposed to happen to the land right across Taylor Road from my property. I have owned this land sense 2001 and was very proud to work hard to pay for it and now this will destroy my work and land value. Please consider the people and our church that this will affect. thank you Larry Vincent

COMMENTS: I live and own land on Taylor Road across from proposed cement plant. I am concerned about the health hazards for my family and my livestock which graze up to Taylor Road. I understand the need for cement but this a bad location for the plant. I also go to the church the plant backs up to and as a church there is great concern as to what it will do to our church which has been here for over a hundred years. Thank you for considering my thoughts Larry Vincent

COMMENTS: Pertaining to Permit number 167047, I am strongly opposing the building of the Kiln, located 3 1/2 miles from my house. I am very concerned about the short term as well as long term affects on the environment(air quality, water quality, ground contamination, heavy metals), health, carcinogenic factors, property values, increased traffic, unwanted extra commercial vehicles and buildings and businesses. The property is right next to residential homes, farms and schools and churches. This would result in negative consequences to the produce grown, animals nearby and in general, the population of the area. Surely there is a better place to put a commercial business that could harm the area! All the above reasons are grounds for NOT building the Kiln but other reasons include ruining the beautiful aesthetics of this area, disturbing the beauty of the land and the peaceful way of life, respecting the home values of the area and the community enjoyment of their home investments. I respectfully submit my OPPOSING of the building of the Kiln on permit 167047. Sincerely, Kim Vodry

COMMENTS: plz see attached document

Texas Commission on Environmental Quality

Let this comment serve as my standing of opposition to the proposed Kiln operation as it relates to Air Quality Permit 167047 and PSD Air Quality Permit PSDTX1602

My family resides on Melton Road in Grayson County approximately 3.5 miles northwest of the proposed plant.

My opposition to this permit stems from the negative effects this operation would have on the community of Dorchester and the surrounding area including my homestead. I implore TCEQ to investigate the responses that BM Dorchester provided on the permit and validate their accuracy. Several questions confirm my thoughts. Among these:

- 1) The omittance of the chartered school within 3,000 feet of the plant site that was conveniently left out of the information on their permit application by Black Mountain
- 2) The omittance of the airport on the adjacent land to the proposed site on their permit application
- 3) Incorrect statements made by Black Mountain concerning the distance of the plant from the Oklahoma state line,
- 4) Incorrect statements made by Black Mountain of the need for a Disaster Review because of the plant storing and using NH3.
- 5) The lack of a written plan for the contamination of the Choctaw and Trinity watershed systems. (required by law)
- 6) The failure to produce a study of the local limestone including an expulsion test showing what organic compounds and pollutants will be generated from the daily operation of the kiln.
- 7) The obviously incorrect claim that this plant will not result in an increase of additional heavy industry businesses, including concrete plants. Like saying that building a Walmart will not result in an increase in shopping.
- 8) Using meteorological studies from locations other than the proposed site.
- 9) The effects of the air currents that will affect the operations at the adjacent airport.
- 10) The lack of a detailed plan to utilize equipment that is truly BACT (Best Available Control Technology) and that produces a maximum reduction of all pollution and emissions.

I ask that consideration be given to the Hagerman Wildlife Refuge and its potential to be designated as a Federal Type 1 refuge. In addition, BM's plans to dispose of hazardous waste on site without a hazardous waste disposal permit is unacceptable. I close by asking that this permit be denied and that the quality of life in the Dorchester community and its surrounding areas be protected.

Thank you for your time,

Kim Vodry

COMMENTS: There is to many chemicals that get unintentionally released with these plants. The wind blows high in all directions the chemicals and landing near schools, parks and homes to residents well outside a ratio is very harmful to all. The chemicals and toxins getting absorbed into our waterways is another issue that is harmful. Grayson is a growing county however whether you want to believe the research or not this will have mass effects on all counties around. Collin county is rapidly becoming one of the most populous counties in Texas. This is strongly opposed for the primary effects to the immediate and radius communities. The amount of effect on the citizens of these counties should be

evaluated thoroughly and considered. The amount of reach to these impacted citizens is beyond harmful. This should not be approved!

COMMENTS: My question is how do you expect me to believe this and a safe when you wouldn't live in in the same conditions. This is a residential area not an industrial area. If you can smell a fart in the wind you can smell the poison this plant emits. This is beyond ridiculous that you would even consider this in a residential area with families! Do what's right and stop this now!!!!

COMMENTS: What I would like to know is why I never got notified but you notified my daughter who isn't even on the deed of the property. Not even my wife was notified by mail. Seems shady to me that you would mail out a notification to my daughter who doesn't even live in the home but you wouldn't mail a notification the the people that actually own the property. I live the closest to the plants location but you don't notify me of the meeting on air quality. I opposed this and know for a fact that they cannot keep this plant compliant and safe for the surround homes and church members. Poisonous gas is not healthy any you can't gauge wind speed or direction and you are using the current land and homeowners as lab rats. This is not safe any you wouldn't approve this if you lived across the street! Applications has tons of errors including wrong schools system.

COMMENTS: I am here today to formally represent my family residing at 1717 Taylor Road, Howe, Texas. Our household consists of myself, my wife, and three children, with a newborn on the way. I appreciate the opportunity to address the Texas Commission on Environmental Quality (TCEQ) this evening regarding the pertinent matters concerning the kiln/concrete plant. My foremost concern is the health and welfare of not only my family but also myself. In 2016, I was diagnosed with an inflammatory condition known as sarcoidosis, which predominantly affects my lungs and overall well-being. This medical condition prompted my relocation from the Dallas area to seek a residential environment with reduced pollutants and irritants, aiming to alleviate the recurrent flares triggered by environmental contaminants. Furthermore, I am deeply concerned about the present and future health implications for my wife and children. In addition to health-related apprehensions, I am troubled by the adverse impact on my wife's ability to obtain essential rest during the day, as she works as a Nurse Practitioner during night shifts, the nuisance and blasting from the unwelcome plant will impede her from getting adequate rest during the plant's operating hours. Furthermore, I express reservations regarding the heightened structure obstructing crucial internet service, particularly the tower positioned towards the east. While I may not possess specialized technical expertise, I comprehend that the elevation will impede the unobstructed transmission required for vital internet connectivity. This not only compromises our family's standard of living but also jeopardizes my professional activities, as I rely on remote internet access for work-from-home arrangements. Lastly, it has been suggested not to broach the topic of how this situation might affect my property value, under the assumption that TCEQ holds no regard for such matters. I strongly disagree with this notion. I firmly believe that we are all interconnected as fellow Texans and Americans, and no resident of the esteemed state of Texas, or the United States at large, would wish financial adversity, emotional distress, or compromised air quality upon another individual. I strongly urge you to strike down this application and keep my family's health and Grayson county and fellow Texans

COMMENTS: I am submitting this form in hopes of attracting attention of the potential concrete/limestone plant that may drastically affect grayson county and its residents. The area consisting of North Texas is drastically growing and gaining attraction and the approvment of this would plan would harshly deplete our counties economy, as well as our sources. Sources such like water are already in high demand, and be even higher demand such as this would be harmful for r community. The main issue I am concerned about is the unnecessary amount of pollution the county will gain with

the addition of this plant. Our county already has an incessant number of power plants in the area, which hurts our air supply, where, something like this can severely damage it and the residents health. This is not only an economical issue, but a health issue for the Grayson county residents.

COMMENTS: RE: 167047 I must vigorously object to the building of this Limestone/Cement Plant in the Dorchester area. I live only a few miles from the proposed location and have numerous concerns about water pollution and air pollution. I have seen firsthand what these plants do to our environment, before I retired I worked for a large electrical supplier and called on a large number of mining operations in Texas and all over Oklahoma. What these plants do is devastating to the land surrounding them, people's houses miles away covered with fine white dust like baby power. Then there's the

creek and water sheds that windup with chemicals and diesel oil in them. Also our water wells that supply Sherman and surrounding areas are extremely close risking pollution to our drinking water. I could write pages on this, but bottom line is this plant will ruin Dorchester and the homes and farms in this part of Grayson County.

COMMENTS: I have seen first hand the water pollution and the mess from all the dust at these type of plants. When I was working I was a Industrial salesman and called on most of the mining operations, rock quarries, cement plants in Oklahoma and North Texas. I can remember homes and cars within a few miles of these plants completely covered with white rock dust. When it rained the creeks looked like they were full of milk. Then there is also the blasting which I have also seen, it throws rocks thousands of feet into the air. The Dolese Co. in Lawton Ok. would have to call Ft.Sill and let them know so they could divert aircraft on blasting days. I only live a few miles from this proposed site, it will absolutely ruin this part of Grayson Co. and the lives of many of my neighbors.

COMMENTS: I want to protest the Concrete Kiln project for Dorchester, Texas. I own property within 4 miles of this proposed site. This plant will affect the air quality in Grayson County. My daughter has asthma, this will dramatically affect her health. She will not be able to visit our family in the area. There are schools within this area and proposed schools also. This is a growing housing area, the population in this part of the county will be negatively affected. I understand that this project will also affect TI, thus affecting jobs in this area. I want to see the proposed Concrete Kiln plant refused permitting. This project will have too many negative impacts on the agricultural, jobs and health of the population of Grayson County.

COMMENTS: To Whom it May Concern, Per the permit for this plant, the pollution will produce over 600 tons of particulate matter and over 60 tons of sulfuric acid annually, and will cause nothing short of an environmental disaster. I am a resident of Collinsville, located roughly 12 miles from the proposed location of this plant. I am writing to express immense concern regarding the application submitted by BM Dorchester LLC for the operation of a cement plant in Dorchester, TX. If you are not already aware, the production of cement is responsible for releasing approximately 4 billion tons of carbon dioxide into the atmosphere annually. Particulate matter in the air can travel up to thousands of miles from its origin, and WILL impact the air quality of the entire county and most likely surrounding counties. Exposure to just the dust from these kilns can cause a variety of pulmonary diseases like COPD, asthma, and lung cancer as well as colon cancer and cardiovascular disease. In fact, studies have shown that cement dust can enter systemic circulation and reach all the organs of body including the heart, liver, spleen, bone, muscles and hair. This dust, when combined with the water in our atmosphere, can/will produce acid rain, which will negatively impact agriculture, an industry which is central to rural Grayson county. Cement dust deposition on agriculture fields can affect soil, photosynthesis, transpiration and respiration of plants. This kiln will also pollute our waterways. Cement dust contains heavy metals such as cobalt, lead, chromium, nickel, and mercury. This, combined with the already acknowledged 60 tons of sulfuric acid, will make our water unsafe to drink. Ingesting and breathing in these chemicals will negatively impact the health of Grayson county residents and the residents of surrounding counties. As citizens we are entitled to clean water and clean air, and allowing this company to open and operate this cement plant is in direct violation of the Clean Air Act and Clean Water Act. I urge you to weigh the health of your residents and of the environment and not allow this plant to be built. Sincerely, Cameryn Warren

COMMENTS: As a taxpaying citizen and property owner living in the vicinity of this proposed plant construction. I DO NOT approve or support the construction of this plant. The water table and drinking water quality of this area is already questionable at best with regards to safety and cleanliness. The air quality is also abhorrent in this area due to local compost farms and land fills. We do not need yet another heavy pollution source added to the mix.

COMMENTS: I personally vote against the Limestone Mining/cement plant being added anywhere within Grayson County and the surrounding areas. Limestone mining/ cement plant is hazardous to not just the environment within the area(s) they are built/ the surrounding areas (30 mile radius minimum) but it is also very hazardous to the people who live in said areas as well as ,the employees at the plant. If this is built the livestock would be affected ; causing our food source to be polluted; water sources and air pollution would be even more of an issue than they already are; Not to mention mass amounts of people will be affected medically (children, elderly, those with compromised immune systems, as well as everyone else). I strongly encourage the law makers and those who make the final decision to rethink building this and think about the people who make up the community of Grayson County and their well being not just from the business aspect but more importantly think about the future generations and what health issues this may bring.

COMMENTS: I have major concerns with this application. I have not seen a public announcement from this company explaining detailed operating plans. There is no available water support in Dorchester and from a waste water standpoint local systems can not keep up with residential growth let alone commercial/business and what about the electrical grid impact. What are the hours of operation? If 24/7, will lights cause issues with neighboring residents? What level of sound from operating mining equipment? What are the environmental impacts? At what level will surrounding

land value decrease? My biggest concern is how is BM Dorchester LLC going to ensure there is no air quality change as lime mining causes serious dust that leads to silicosis and this is a populated area.

COMMENTS: I have major concerns with this application. I have not seen a public announcement from this company explaining detailed operating plans. There is no available water support in Dorchester and from a waste water standpoint local systems can not keep up with residential growth let alone commercial/business and what about the electrical grid impact. What are the hours of operation? If 24/7, will lights cause issues with neighboring residents? What level of sound from operating mining equipment? What are the environmental impacts? At what level will surrounding

land value decrease? My biggest concern is how is BM Dorchester LLC going to ensure there is no air quality change as lime mining causes serious dust that leads to silicosis and this is a populated area.

COMMENTS: I'm contacting you to let you know I oppose the Black Mountain limestone mining kiln proposed to be located near Dorchester Texas. The majority of the people in the area are small farmers and ranchers who will be negatively impacted by this facility. The air, noise, and water pollution will impact production of both crops and livestock as well as endanger the long-term health of the residents. The well water source for over 600 residents is located about a mile from the proposed facility, there is a regional airport that would be only a few thousand feet from the facility. With the area undergoing rapid growth from the north in Sherman and the south from the North Dallas suburbs this

plant would doom the area to become the dumping ground of every unwanted project. I have yet to meet a single resident in favor of this plant and am asking for your support in stopping it from going forward.

COMMENTS: We DO NOT want this. The air quality will that comes with this plant will ruin my pasture in which we raise and run beef cattle for consumption for the general population. Studies have shown these plants also cause lower reproductive rates and abortions in cattle near these plants. The polluted air this generates will have horrible effects on my cattle and my business. Not to mention the many acres of farmland used to food within the USA. I live very close to this and there is zero way to ensure their polluted air stays within their boundaries aka think the Sahara dust we are currently having. They can't control their pollutants from leaving their land.

COMMENTS: My clients own the corner of 289 and 902 in Dorchester. They are OPPOSED to the lime stone plant. That intersection at some point in time will be a good commercial intersection. This type of use in and around the Preston road area is not wanted. This will affect land values negatively in this area. WE DO NOT WANT THIS IN OUR NEIGHBORHOOD.

COMMENTS: I am writing in reference to the proposed air quality permit for the limestone mining plant by the entity name "Dorchester Plant". My husband and I have lived in Dorchester for close to 40 years. We own land and 3 rental properties as well as our residence. My husband and daughter both suffer from lung issues. My husband suffered from asthma as a child but seemed to have outgrown it. His lungs issues resumed when the concrete plant began operations in Gunter. We can see the plant from our home. His asthma requires powerful drugs and is scary. There is no doubt that

the pollutants created from the existing concrete plant have contributed to the resurgence of his lung issues. Our daughter, who resides approximately 1 mile from the proposed site also has lung issues. She frequently suffers from pneumonia which can be life threatening. She should not be displaced from her home as a result of this proposed mine. In addition to health concerns, we are concerned about the changes to the natural infrastructure and ecological function. Natural habitats will face challenges due to soil changes, water demands, and of course air quality. We anticipate that our roads will be more dangerous as a result of the increased number of semis and traffic from required transport. Currently, the Gunter concrete plant has contributed to a huge increase in traffic on our 2-lane roads. I was forced to quit running (exercise) due to the dangerous increase of rock trucks and concrete trucks traversing FM 902 and State Highway 289. It's unbelievable how many of these vehicles we see daily. We also have concerns regarding our land values. I've been told this is irrelevant to the permit but it SHOULD be and is very relevant to us. My husband and I have toiled and labored to achieve our American dream. It is a crying shame that a large company can take that away from us in the blink of an eye with the intent to line their own pockets. An added note: While Collin County requires emission testing to register vehicles, our county does not. Our air quality is currently good but will not remain that way if this mine is allowed to invade our turf. This mine would not just impact Dorchester but numerous surrounding communities, including Sherman, Howe, Sadler, Southmayd, Gunter, Celina, Van Alstyne and several others. There is this thing called wind that will carry the pollutants. They will also be impacted by the traffic. Thank you for consideration of our concerns. I'm not sure how to communicate to you how devastated we are at the idea that things would be allowed to change SO dramatically for us if a permit is issued to a second plant in our community. Please take this summary to heart and think how you might feel if you were in our shoes. Sincerely, Teresa Wildman

Laurie Gharts, Chief Clerk, MC-105
P.O. Box 13087
Austin, Texas 78701-3087

Dear Ms. Gharts,

I am writing to you in reference to the proposed air quality permit application #167047 for the limestone mining/cement plant by the entity name "Dorchester Plant". I have a number of concerns regarding the proposed plant.

My husband and I grew up in Dallas, Texas. We both desired a country life. We share a love of nature and animals. My husband also suffers from asthma and had hopes of escaping the big city for a life of green and fresh air. He purchased a home on the SW corner of Highway 289 and Farm to Market 902. This home is less than one mile from the site of the proposed Dorchester Plant. We married in 1985 and were blessed with our first child in February of 1986. She was born at 28 week, at 2 pounds 6 ounces. As a result of her premature delivery, she struggled with underdeveloped lungs and required assistance with breathing while in NICU. She has continued to be plagued with lung issues. She has suffered from bouts of pneumonia throughout her life and we have been told that with each pneumonia illness, her lungs develop additional scar tissue. We have felt so blessed to live a country life with minimal concerns regarding pollution. Pollutants compromise the host's immune system and studies have shown that pneumonia in a person is DOUBLED in response to air pollution. Scientifically stated, air pollution has been shown to exacerbate respiratory diseases such as asthma and also increases the risk for pneumonia "by IMPAIRING THE FUNCTION OF PULMONARY ALVEOLAR MACROPHAGES AND EPITHELIAL CELLS." Our daughter lives full time in the home in which she was raised (SW corner of 902 & 289).

My husband and I live 2 miles from the site. He also suffers from pulmonary disease and oftentimes relies on a powerful inhaler to get through the day. There was a time when we thought he had outgrown his asthma however, a few years ago he began suffering with breathing issues again. It was about the time a concrete plant began operations in Gunter, Texas. I am looking out my bedroom window and can see the plant from my window.

My family's health is my greatest objection to the Dorchester Plant that is seeking a permit. I would be lying if I said I was not fearful of additional changes that the plant will bring. Currently, we are plagued with semi trucks (carrying rock I assume) and concrete trucks running up and down the road. We literally see hundreds of them daily. They are reckless. I have been an avid runner much of my life but was forced to quit running a year or so ago as it became my reality that these semi-trucks are a threat to me. While I can get to smaller roads, I'm required to run a good distance on Highway 902 to do so. In addition to the pollutants that will be expelled from the plant, there no doubt will be destruction to natural infrastructure and ecological function. We also have concerns regarding our land values. I've been told that that's irrelevant to the permit, but it should not be. We have toiled and labored to achieve our American dream. It is a crying shame that a large company can take that away from us in the blink of an eye with the intent to line their own pockets. An added note: While Collin County requires emission testing to register any vehicle, our county does not. Our air quality is good in Grayson County. Emission testing is not required here although I believe that will change if the plant is given a permit. Thank you for your time and your patience with this long letter. I'm not sure how to communicate to you how devastated we are at the idea that things can change SO dramatically for us if a permit is administered to a second concrete plant in our community. Please take this letter to heart and think how you might feel if you were in our shoes.

Sincerely,

A handwritten signature in cursive script that reads "Terry Wildman". The ink is dark and the handwriting is fluid.

COMMENTS: I am highly opposed to this plant being put in Dorchester. It will take away the only church that is there to worship as well as the weekly market they host. I've lived here seven years and do not want to have any more contamination or the air quality affected. There are several farmsteads in our surrounding area and my house and I feel like this would affect them as well as all of the children and families living in my neighborhood. We do not want this plant here.

COMMENTS: see attached

HOWE INDEPENDENT SCHOOL DISTRICT

A RESOLUTION OF THE BOARD OF TRUSTEES OF THE HOWE INDEPENDENT SCHOOL DISTRICT ("HOWE ISD" OR "DISTRICT") OPPOSING AIR QUALITY PERMIT 167047, PREVENTION OF SIGNIFICANT DETERIORATION PERMIT PSDTX1602, GREENHOUSE GAS PREVENTION PERMIT GHGPDSTX212 AND ALL OTHER PERMITS SUBMITTED TO THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY BY BM DORCHESTER, LLC, DORCHESTER CEMENT PRODUCTION PLANT (PRECALCINER KILN AND ASSOCIATED EQUIPMENT FACILITY) AND CRUSHERS (QUARRY) AT A SITE NORTHEAST OF THE STATE HIGHWAY 289 AND FM 902 INTERSECTION; RECOGNIZING THE PUBLIC HEALTH, SAFETY AND WELFARE IMPLICATIONS OF THE PROPOSED OPERATION; AND URGING THOROUGH REVIEW OF SAID APPLICATIONS

WHEREAS, The Howe Independent School District Board of Trustees (HISD Board) finds it to be in the public interest and necessary for the public health, safety, and welfare to announce and submit its concerns regarding potential harm resulting from a proposed use of land that the Board believes is incompatible with nearby school sites; and

WHEREAS, BM Dorchester, LLC, is seeking to build and operate a 660-acre cement production plant consisting of a precalciner kiln and associated equipment facility at a site northeast of the State HWY 289 and FM 902 intersection; and

WHEREAS, BM Dorchester, LLC, has applied to the Texas Commission on Environmental Quality (TCEQ) for the issuance of an Air Quality Permit 167047, a Prevention of Significant Deterioration (PSD) Permit PSDTX1602, and a Greenhouse Gas Prevention of Significant Deterioration (GHGPD) Permit GHGPDSTX212, regarding the construction and operation of the Cement Plant; and

WHEREAS, TCEQ is seeking written comments about the permit applications, which the public may submit through TCEQ's website; and

WHEREAS, Howe ISD is concerned about the location of the proposed Cement Plant due to the fact that it currently has 2 schools within 5 miles of the proposed plant and 5 dedicated school sites within 3 miles of the proposed site; and

WHEREAS, Howe ISD has students who have had and currently have health concerns, including Cystic Fibrosis, Asthma, and other respiratory ailments that could be negatively impacted by emissions from a Cement Plant; and

WHEREAS, Howe ISD is also concerned about potential air, noise, blast, seismic waves and light pollution from the proposed Cement Plant and the nuisance conditions that could result from the operation. For example, seismic waves and other activity emanating from the Cement Plant could negatively affect school facilities in the area;

WHEREAS, Howe ISD supports private property rights and the rights of property owners to develop their property as they wish so long as they do so in compliance with all federal, state, and local laws and regulations, and they do so in ways that do not negatively impact surrounding property owners or their uses; and

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF TRUSTEES OF THE HOWE INDEPENDENT SCHOOL DISTRICT:

The Howe ISD Board of Trustees hereby states its opposition to the proposed location of the BM Dorchester, LLC, Cement Plant and requests that the TCEQ, in reviewing the applications for Permits, use its expertise and authority to protect the health, safety and welfare of the students and staff of Howe ISD.

PASSED AND APPROVED by the Board of Trustees of Howe Independent School District this 21st day of March 2022.

Clint Catching, President
Board of Trustees
Howe Independent School District

ATTEST.

Tamela Shadden, Secretary
Board of Trustees

COMMENTS: I spoke at the public meeting tonight. I wanted to ensure that you had the resolution adopted by our School District Board of Trustees opposing the proposed air quality permit for BM Dorchester LLC. I also referenced a development agreement signed in 2011 regarding dedicated school sites for future construction within 2-4 miles of the proposed plant. If you need documentation of that, I can either provide it, or it is recorded with Grayson County.

HOWE INDEPENDENT SCHOOL DISTRICT

A RESOLUTION OF THE BOARD OF TRUSTEES OF THE HOWE INDEPENDENT SCHOOL DISTRICT ("HOWE ISD" OR "DISTRICT") OPPOSING AIR QUALITY PERMIT 167047, PREVENTION OF SIGNIFICANT DETERIORATION PERMIT PSDTX1602, GREENHOUSE GAS PREVENTION PERMIT GHGPDSTX212 AND ALL OTHER PERMITS SUBMITTED TO THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY BY BM DORCHESTER, LLC, DORCHESTER CEMENT PRODUCTION PLANT (PRECALCINER KILN AND ASSOCIATED EQUIPMENT FACILITY) AND CRUSHERS (QUARRY) AT A SITE NORTHEAST OF THE STATE HIGHWAY 289 AND FM 902 INTERSECTION; RECOGNIZING THE PUBLIC HEALTH, SAFETY AND WELFARE IMPLICATIONS OF THE PROPOSED OPERATION; AND URGING THOROUGH REVIEW OF SAID APPLICATIONS

WHEREAS, The Howe Independent School District Board of Trustees (HISD Board) finds it to be in the public interest and necessary for the public health, safety, and welfare to announce and submit its concerns regarding potential harm resulting from a proposed use of land that the Board believes is incompatible with nearby school sites; and

WHEREAS, BM Dorchester, LLC, is seeking to build and operate a 660-acre cement production plant consisting of a precalciner kiln and associated equipment facility at a site northeast of the State HWY 289 and FM 902 intersection; and

WHEREAS, BM Dorchester, LLC, has applied to the Texas Commission on Environmental Quality (TCEQ) for the issuance of an Air Quality Permit 167047, a Prevention of Significant Deterioration (PSD) Permit PSDTX1602, and a Greenhouse Gas Prevention of Significant Deterioration (GHGPDSTX212), regarding the construction and operation of the Cement Plant; and

WHEREAS, TCEQ is seeking written comments about the permit applications, which the public may submit through TCEQ's website; and

WHEREAS, Howe ISD is concerned about the location of the proposed Cement Plant due to the fact that it currently has 2 schools within 5 miles of the proposed plant and 5 dedicated school sites within 3 miles of the proposed site; and

WHEREAS, Howe ISD has students who have had and currently have health concerns, including Cystic Fibrosis, Asthma, and other respiratory ailments that could be negatively impacted by emissions from a Cement Plant; and

WHEREAS, Howe ISD is also concerned about potential air, noise, blast, seismic waves and light pollution from the proposed Cement Plant and the nuisance conditions that could result from the operation. For example, seismic waves and other activity emanating from the Cement Plant could negatively affect school facilities in the area;

WHEREAS, Howe ISD supports private property rights and the rights of property owners to develop their property as they wish so long as they do so in compliance with all federal, state, and local laws and regulations, and they do so in ways that do not negatively impact surrounding property owners or their uses; and

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF TRUSTEES OF THE HOWE INDEPENDENT SCHOOL DISTRICT:

The Howe ISD Board of Trustees hereby states its opposition to the proposed location of the BM Dorchester, LLC, Cement Plant and requests that the TCEQ, in reviewing the applications for Permits, use its expertise and authority to protect the health, safety and welfare of the students and staff of Howe ISD.

PASSED AND APPROVED by the Board of Trustees of Howe Independent School District this 21st day of March 2022.

COMMENTS: I am the superintendent of Howe ISD, and I speak on behalf of the school district. Howe ISD opposes this permit based on the fact that we have 3 current campuses within 5 miles of the proposed plant (4.1, 4.5 and 4.6 miles) and possess land for 4 future elementary/middle school sites that are within 4 miles, two of which are within 2 miles. Our school district is about to experience a period of rapid growth with multiple housing developments already under construction, so we will likely be needing these future sites within the next 3-5 years. We also have had discussion of purchasing a site for a future high school in the Dorchester area, which would most likely be within 2 miles of the BM Dorchester plant as well. As a public school system, we routinely serve students with various respiratory illnesses, and the proximity to this proposed plant would have a detrimental effect on our students. While this area may appear to be remote on a current map, it will be densely populated with houses and schools in the very near future. It is not an appropriate site for a plant this nature. Attached is a resolution adopted by the Howe ISD Board of Trustees opposing this permit/plant.

HOWE INDEPENDENT SCHOOL DISTRICT

A RESOLUTION OF THE BOARD OF TRUSTEES OF THE HOWE INDEPENDENT SCHOOL DISTRICT ("HOWE ISD" OR "DISTRICT") OPPOSING AIR QUALITY PERMIT 167047, PREVENTION OF SIGNIFICANT DETERIORATION PERMIT PSDTX1602, GREENHOUSE GAS PREVENTION PERMIT GHGPDSTX212 AND ALL OTHER PERMITS SUBMITTED TO THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY BY BM DORCHESTER, LLC, DORCHESTER CEMENT PRODUCTION PLANT (PRECALCINER KILN AND ASSOCIATED EQUIPMENT FACILITY) AND CRUSHERS (QUARRY) AT A SITE NORTHEAST OF THE STATE HIGHWAY 289 AND FM 902 INTERSECTION; RECOGNIZING THE PUBLIC HEALTH, SAFETY AND WELFARE IMPLICATIONS OF THE PROPOSED OPERATION; AND URGING THOROUGH REVIEW OF SAID APPLICATIONS

COMMENTS: I am expressing my objection to the proposed Dorchester Limestone Mining/Cement Plant. My family, as well as many others in the surrounding areas, make our living raising cattle on ranches that have been in the family for generations. Not only will this be a terrible eyesore, it will diminish air and land quality. I, along with my family and neighbors that live in the Dorchester area, DO NOT want this ruining the community of Dorchester. Thank you.

Subject: BM Limestone Mining Kiln - Dorchester, TX

To whom it may concern,

My family has lived in Grayson County for generations and have ranched near Dorchester, Texas since the early 1900s. We raise commercial Hereford cattle, own performance horses and my husband is an avid outdoorsman.

I am reaching out to bring awareness to the proposed High Roller Group cement plant in Dorchester. A plant like this will push out the farmers and ranchers whose livelihood depends on clean land, air and water.

This plant will include a rock quarry, kiln and multiple smoke stacks, and we have heard there has been much left off their applications, as well as permits. It will be in the backyard of houses, a First Baptist Church and at the beginning of the East Fork of the Trinity River. The East Fork begins 1.5 miles northwest of the proposed plant, with the water running directly by it. This plant will cause increased pollution and harm to the water that flows from not only Grayson County, but south for 80 miles through Collin, Rockwall and Dallas County. It flows to Lake Lavon (the uppermost reservoir) which provides drinking water for over a million North Texans.

Not only will it be located close to the East Fork, it will be located by the Dorchester water well, which services not only Dorchester but surrounding areas. The toxins released may include sulfuric acid, lead, nitrogen oxide, carbon monoxide, and particulate matter. Mining operations can remove ground water, alter streams and rivers, and contaminate land, air and water.

Attached is a flier for a public meeting to be held Monday, March 25, 7pm, at the Hilton Garden Inn Denison, TX. We need all the help we can get to stop this. We will not be steam rolled into being quiet about the damage this will do to the land, air and water of North Texas.

Thank you for your time,
Krista Lucas Wynn

PUBLIC MEETING

*Limestone Quarry and Cement Kiln
in Dorchester, Texas*

Voice Your Opposition

A 600+ acre limestone mining/cement plant DIRECTLY beside and behind First Baptist Church Dorchester on FM 902 will affect more than a 30-mile radius due to pollution, traffic, water availability and contamination, air quality, and many other things we love about Grayson County.

MONDAY, MARCH 25 @ 7PM

The Hilton Garden Inn
5015 S. US HWY 75, Denison, TX

**218 Tons of Particulate Matter
This is NOT a Batch Plant!**

COMMENTS: We should not be the receiving end of all this pollution. There is a reason the plants are pulling out of the bigger cities. These cities have to population to fight the air pollution and keep the standards that are required for a healthy community. Please do not let this permit go through. We are in the country to live a healthy life, not to have to worry about the air our children breath, not to worry about pre-existing conditions being inflamed, and not to worry about continued pressure by these companies. Please utilize the power of the TCEQ to uphold the air quality of our quiet

country towns of Texas. The power given and the resources at your disposal are counted on by the residents of Texas to help us maintain the quality of life granted to Texans.

COMMENTS: As Gunter sits at a much higher altitude than the Denton site measured by TCEQ in order to establish the toxicity levels, I am very concerned that the air quality will be severely affected. The lack of accountability in studies that are not applicable to the Grayson County community is more than concerning. Having severe allergies in our family, we will not only be affected but the effect that the plant will have on the families willing to move out the country will diminish. For Gunter specifically, that will

lower our property values, decrease the ability to sell and will inhibit the growth of the Gunter ISD. We are begging at this point for TCEQ to take our concerns into consideration and have thoughtful, considerate, compassionate discussions before proceeding.

COMMENTS: Obvious concerns include: • Decreased quality of country living • Health risks to all citizens – Do you know any one with Asthma or breathing conditions? • Excessive noise pollution • Decreased property values • 24-hour a day lighting pollution • Air pollution – Dust, fuel and chemicals including sulfuric acid, nitrogen oxides, and carbon monoxide • Excessive draw on the water table – Dorchester is currently home to wells that supply Sherman, Dorchester, Howe, and Gunter populations. With existing water concerns, this WILL affect our water supply! • Health risks to livestock and wildlife • Heavy industrial traffic on our neighborhood roads • Commercial traffic will never stop – Semi loads of equipment and materials will destroy our roads and highways including FM 902, Hwy 289, and too many county roads to

list. Detailed concerns include:

- **Ground Water** - Limestone mining can affect ground water conditions. Limestone deposits often occur. The deposits result in sinkholes, caves and areas of rock fractures that form underground drainage areas. When mining occurs, disruption to natural aquifers, or flows of underground water, can result. Often, mining operations remove ground water to expose the quarrying site, which can lower the water table and change how water flows through the rock formations.
- **Surface Water** - Streams and rivers can be altered when mines pump excess water from a limestone quarry into downstream natural channels. This increases the danger of flooding, and any pollutants or changes in water quality affects the surface water. Upstream surface water features, such as marshes, ponds and wetlands, can lose volume as their waters drain into the mine and are pumped out.
- **Sinkholes** - As water and rock are removed from mines, the support they give to underground features is gone. Sinkholes can develop, where the roofs of underground caverns are weakened or collapse. Collapse can be gradual or sudden.
- **Blasting and Construction** - Limestone mines use two types of blasting. Small explosive charges set along drilled lines free blocks of stone to be removed for construction. Large charges reduce whole areas of limestone to rubble, which is removed for use as crushed stone. The noise, dust, and impact from explosions can result in noise pollution and dust. Underground forces from the blasts can cause sinkholes or change the drainage and water quality of underground aquifers. Construction equipment, such as large trucks, crushing machines and earth-moving equipment, also contribute to noise and dust.

COMMENTS: Here are step by step directions For those of you who are unable to make the actual meeting in Sherman in October regarding the proposed MUD district. Here's the information to go online and protest. It's simple Here are directions to protest digitally. I strongly oppose the granting of this permit. There are inherent health risks associated with this proposal. We are one of the heaviest wind zones in Texas, which comes into serious play with the distribution of these chemicals. The winds mostly blow northwest and northeast (according to the NOAA wind data). Imagine you waking up on a random Thursday to a thin line of dust on your car, or your kids playing outside during a day that the wind happens to be blowing in your direction. Imagine the impact of these toxic chemicals seeping into your well water

and the large amount of water the concrete plant will be using, drawn away from public use of citizens to this plant ... all to keep the business going. Imagine the noise pollution from setting off explosive charges and the light pollution needed to operate late at night. Respectfully, we ask that you don't allow this to be permitted. It would be a disservice to the community and the environment. Thank you for your consideration.

Chief Clerk at TCEQ,

The following information is in response to permit number 167047 in regards to the BM Cement plant being built in Dorchester, Texas. As an educator I think it is extremely important to connect learning with real world experiences and give all students the opportunity to share their voice. In doing so my students have written a letter either for or against the development of Portland Cement Plant building a cement factory in Dorchester, Texas.

In class we have looked at what the cement plants goals are, how they develop their products, and how this could impact jobs and the economy in the area. As well as environmental issues and complaints of citizens who live in Midlothian, Texas where there are similar plants located. Students had the opportunity to formulate their opinions and write for or against the approval of the permit. The attached letters are written anonymously to protect the identities of each student.

I urge you to take each one of these letters into consideration before making a final decision on this permit. These students are our future and their voices should be heard before decisions are made that impact the world they live in. Thank you for your time and consideration.

Best Regards,

Sara Salinas

By GCW

Dear TCEQ,

Think of a country side of animals, green grass, then think of a giant building crushing all of the landscape and replacing it with a cement plant. I am against this because It could make people and animals really sick from all the smoke. It would also be really loud and scare off all the animals and break down all the trees and all the rocks.

I think they should not build the Portland Cement plant because it would make families and animals sick that are down wind or nearby because of the fumes. Also it would be really loud and noisy and families and animals would not be able to sleep.

You should help us stop pollution because it is bad for the environment. It is bad for the environment because pollution can be bad for the earth and living animals and people by breathing in the fumes. If you want to help the environment you should help stop making less factories.

Sincerely,

A 6th grade Student

CHIEF OF POLICE

2021 MAR 19 PM 11:16

ON ENVIRONMENTAL
CO-OP

Dear TECQ,

Despite people wanting to build the Portland cement factory there are a lot of downsides. I am against the factory being built because you have to think about how loud it would be for the church. I think that they shouldn't build the cement plant because it could impact the animals and their offspring. There are more downsides than advantages to this being built like more air pollution which leads to birds having major health issues. I am against the Portland Cement factory being built because it's bad for the animals mental and physical health.

My first reason that I am against the building of the Portland cement factory is that they will probably use more fossil fuels just to make cement and put more chemicals into the air and on the ground and will hurt the animals health. My second reason is that there will be a major increase in air and water pollution that will hurt birds and fish. My third reason is the animals' conditions will get much worse and the same for their offsprings and might have an increase in deformity by all the chemicals. My fourth reason is the chemicals will end up on trees, plants, and grass which will lead them to die.

We should be against the building of the Portland Cement factory because it will have a bad impact on the people going to the church. It will be terrible for the plants, trees, and grass ultimately dying from the chemicals. The need to stop them from building the cement factory because there could be an increase in animal deformity because of the chemicals. As stated we need to stop the building of the Portland Cement Factory because of the negative impacts on our environment and the animals.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

ON FILE
JAN 15 2021

The Chief Clerk at TCEQ,

The company named Portland Cement Plant is trying to come to Dorchester,Tx and put a plant. I personally disagree with this idea that the Portland cement plant is trying to do, because it can cause air pollution and can make the air that we breathe dangerous. Also a plant can damage a lot of habitats and ecosystems for animals. This is why I disagree with this idea.

With this plant more chemicals can be released in the air and can make the air dangerous to breathe. With dangerous chemicals in the air this can lead to a disease called Asthma. The plant can also cause acid rain, which is created by the plant that releases chemicals. The chemicals make the water in the clouds into acid rain.

The plant can also ruin many habitats that animals live in. Firstly animals have homes where the plant wants to build, but if the plant is built it can kill the animals and destroy their home. They will have to build a new home or they will have to relocate to another place. This migration could disrupt the food chains and can starve many animals which could cause them to die.

In conclusion, this is the reason why I don't want the Portland cement plant to put a plant in Dorchester,Texas. One of the reasons is air pollution, and can also ruin many habitats and ecosystems. I urge you to read this so you can understand that this plant can cause damage to us and the animals.

Sincerely,

A 6th grade Student

ON ENVIRONMENTAL
COA REVIEW

TCEQ,

Imagine if you're living in a beautiful place with no gas, no pollution, and healthy animals. Then you see a note in your mailbox that says- "TODAY VOTE FOR THE PORTLAND CEMENT PLANT TO COME INTO DORCHESTER, TEXAS." If this is approved the pollution can kill a lot of animals and it can also kill humans. This is why I don't approve for the Portland Cement Plant to come to Dorchester, Texas.

If we don't vote no and they build this cement plant it will possibly give people lung cancer or trouble breathing by filling our lungs with gas and bad pollution in your lungs. If they even say they don't use fossil fuels then how are they gonna burn the rocks so they have to use fossil fuels. This is why you need to stop and say: "NO WE DON'T NEED THIS IT MEANS NOTHING TO US ALL." This cuts my conclusion to no we don't need it.

Sincerely,

A 6th grade Student

ON ENVIRONMENTAL
QUALITY
BOARD

TCEQ,

There is a huge picture of land with trees, grass, flowers, and leaves. Then you see there is a whole bunch of ash and pollution covering the sweet innocent land. This would happen because of a plant coming into our area. I am against the Portland Cement plant because this would be bad for the community due to the air pollution and water pollution, and there would be so much more talking in the area some people would complain about it being too noisy.

This would be bad also for the animals living in the land because their oxygen would not be clean and this could cause illness. I am against this for every person and every animal because I want them to be healthy. There would be a whole bunch of pollution in the sky. It would be black it's like killing the earth.

Another thing is that this would bring more people to the area. It could be a good thing but also a bad thing because the people who lived there first would not have any space because all the extra people would be added to the population. More people being added to the population would cause more traffic or too many people outside you can't even play on your front porch!

Please be against this because nobody wants to have this big factory taking up space. Also this could cause so much damage to Dorchester, all the electricity would be wasted because of the lights in the factory, the population would keep adding up and this could cause damage to the trees, grass, and animals.

Sincerely,

A 6th grade Student

COMMISSION
ON ENVIRONMENTAL
QUALITY

To whom it may concern,

Cities near cement plants show larger amounts of illnesses such as cancer and respiratory problems. I am against the Portland Cement Plant being built in Dorchester. I am against it because it produces large amounts of air pollution. I am also against it because it is very loud and bright, and that can disrupt the environment. Lastly, I am against it because it can cause various health issues to people living near the Portland Cement Plant. I am against the construction of the Portland Cement Plant in Dorchester because it harms the environment and people living nearby in multiple ways.

I do not want the Portland Cement Plant to be built in Dorchester for multiple reasons. First, I am against the construction of the Portland Cement Plant because it causes lots of air pollution by burning fuel. The air pollution created by the cement plant could hurt the atmosphere. I am also against it because it is very loud and bright because of the machinery and lights in the cement plant. The sound and light can disrupt the nearby animals and people. Lastly, I am against the construction of this cement plant in Dorchester because the pollution it creates can cause cancer and respiratory problems to people living nearby. The cement plant could not only harm the environment, but it could also harm people.

I wouldn't want the Portland Cement Plant to be constructed. I don't want this plant to be built in Dorchester because it creates large amounts of air pollution, it is very noisy and bright, and it can cause various health issues for people living nearby the cement plant. I ask that you consider the effects of the cement plant, and I hope that we're able to keep it from being built.

Sincerely,

A 6th grade Student

COLLECTED
QUALITY
TAL

To the Chief Clerk at TCEQ,

Imagine that instead of having a bright, shining day, you wake up with black and gray smoke everywhere. I don't like the feeling of having the Portland Cement plant in Dorchester. I would not like to have sickness or any other bad effects in place of a better economy and decreasing cement shortage. I'd rather not have my daily life be affected. I would not like to worry about breathing in hazardous fumes and getting cancer or something. All around, I'd prefer to not have the cement plant built.

Some reasons I don't approve of this company coming to Dorchester is that the smoke that is going to be produced by the plant is bad for the environment. People nearby might get sick and even die. Another reason is that even though you regrow the environment after you're done with the quarry, it's not the same for the animals and could ruin how they live. Yet another reason is that it will be loud, and imagine having construction right by your house while you're sleeping. My final reason is that it could bring more people. That's bad because that will bring more houses, which will bring more building, which will bring more pollution, which will bring less animals, which will kill our environment.

In conclusion, I don't like the feeling of having the Portland Cement plant in Dorchester. The dust and smoke produced by the plant could give sicknesses and would be bad for you. It would cause environmental issues which would also be bad. So all in all, I don't want the plant to be built. So I would not like to have the plant because of all of the health and environmental issues it would cause.

Regards,

A 6th grade Student

CHIEF CLERKS OFFICE

ENVIRONMENTAL
QUALITY
DIVISION

To the manager of Portland Cement Plant

I don't think the Portland Cement Plant is good for the environment because think about a beautiful land with animals and plants you will destroy in Dorchester, Texas by building this. It would be really loud. Think about the animals that got driven out of their homes because of the loud sounds and lights. You would be destroying the plants and animals home. We don't want to have air pollution because you would be burning fossil fuels and that causes air pollution and when we pollute the air it makes it to where we can't breathe well.

The reason why I'm against this is because you will be making lots of noise. This is bad for the animals and the places and people around. The animals can get irritated, and they will have to move away from their homes. Their homes will get destroyed during the construction. It is bad for the people around the plant, because you are burning fossil fuels that will make smoke. That will pollute the air and make it to where we can't breathe. Also, the plant will be using a lot of light to be able to see while the plant is working, and the lights may bother the animals and people around.

In conclusion, you can hurt the animals by polluting the air and destroying their homes. When you destroy animals' homes then they have to move somewhere else. The sound and the light may irritate the people around it. Please consider my thoughts about the idea of the plant.

Sincerely,

A 6th Grade Student

ENVIRONMENTAL

To the TCEQ

Have you ever read a tall tale or folklore? Odds are you have, and you would know that the fox is a creature that is sly and tricky, and they always win in the end. Well there is a plant, which I oppose, called Portland Cement Plant who is our fox. There is a way to stand up and stop yet another resource plant, by seeing all of their flaws. First they use waste, but if you listen closely they burn the waste which is still using fossil fuel. Also, they picture a false sense of good doing. This is done because they try to cover up the bad side. In conclusion the overall effect of the site is hurtful to the area.

One of the many reasons why I don't approve of this build is because it hurts more than it helps. First reason is because it hurts animals by not only destroying their environment but they also release chemicals that we have protection for while the chemicals hurt animals without protection. Second reason is that the Portland Cement plant openly admits to burning waste to make fuel, but they still use more fossil fuels than waste energy. Third is that they harm the people that surround it by not only causing sound and light pollution but they also produce chemical pollution. Although it provides more jobs, it doesn't make it perfect. All in all I do not approve, like, or support this plant.

You should stand with us by voting to not have this plant built in the green environment. Do some good and help us stop the villain that is polluting and hurting the environment. I do not stand with this villain, be a hero and help our cause of getting rid of this idea of a false good. All the help could make a difference.

Sincerely,

A Sixth grade Student

CO. ENV. DIVISION
CENTRAL

Dear TCEQ,

I'm against the Portland Cement plant because it causes a lot of issues to our environment and will cause breathing issues. I'm against it because air and water pollution will be bad. Water could have toxins in it so people will die and the air pollution could cause asthma.

The Portland cement plant will be bad for the environment because animals will die. The people that work at the plant will have suits that protect them from gasses and people in the community and the animals won't. The plant should not be in Dorchester, Texas because it will cause a lot of problems with the air, water, animals, and plant life. It would not be a good idea to put it here.

The cement plant should not be at Dorchester, Tx because it can cause asthma and breathing problems. The animals will die because there will be air pollution. The people will not have safe drinking water because of pollution and will be all dirty and won't be safe to drink. In conclusion the plant would be bad in Dorchester Tx. The plant would be bad to be here because of air pollution and many other reasons.

Sincerely,
A 6th grade Student

CHIEF CLERK'S OFFICE

2024 MAR 14 PM 11:15

ON ENVIRONMENTAL
QUALITY
GOVERNMENT

To the chief clerk at TCEQ

Have you ever wondered what the impacts of cement companies are? Well I'm going to tell you why I'm against it. The cement plant takes up a lot of land that is used for animals, and it takes all the natural resources away from the animals. All the chemicals that are going into the air can potentially pollute over time. For these reasons I'm against the Portland cement plant coming to Dorchester.

I'm against the Portland Cement company being built because all of the impacts are so bad and it damages the environment around it. Like for example when they make cement all the gasses go into the air and can cause air pollution. Air pollution can affect the way we breathe and it can cause a lot of complications. If the Portland cement company does end up getting built it would be built right next to a church which would disrupt everybody at the church. Since the town is super small everything is right next to each other and would make a lot of noise if it got placed in that area. I think it's very important to protect the environment around us.

We need to protect our natural resources while we still can, because once our resources are gone we can't get them back for millions of years. This is why I'm against the Portland cement plant being built. Thank you for your time. I hope you take this into consideration and decide to not build the plant.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:15

ON FILE
COPIES
TWO

TCEQ,

I am completely against Portland Cement building a cement plant in Dorchester, Texas because of pollution and air quality issues. The air pollution causes lung disease and asthma. The Portland cement plant is bad because of the toxic dust it will release into the. Air and the amount of rock dust will also cause lung disease risk to go up. The fuel uses mostly fossil fuels and will destroy habitats. The plant looks like a good idea but it is really very bad.

The reason the Portland cement plant should not be built is because the plant puts out too much air pollution for such a small town. The plant causes a lot of pollution and causes many issues. Those issues include lung cancer, asthma and that's why the cement plant should not be built.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 PM 11:15

ON FILE
QUALITY
CONTROL

To the Chief Clerk at the TCEQ,

Imagine you are driving down the road to see a beautiful green forest, but you then see some dead plants and scared animals leading up to a big smoke trail in the sky... I am against the idea of Portland Cement because of the consequences that can come of it and ruin our country.

The reason why I am against this idea of Portland Cement is because of the air pollution, water pollution, and noise. My first reason is that the noise from the Portland Cement could be loud and obnoxious and disturb us all including the animals. This is just one of the reasons why we should not make the Portland Cement because of how it will harm the environment. My second and last reason is Air pollution. This will happen because of the deadly gas that could be released even though it might be below the limit. It could still cause bad things to happen like non-breathable air harming us and the animals too. So these are two reasons why I am against the idea of Portland Cement as it would lead to consequences that could leave long-lasting harmful effects on our community which could be Water Pollution, Air Pollution, and loud noises.

In conclusion I urge you to rethink and consider the effects of the Portland Cement plant coming to Dorchester, Texas. Think about what it would do to our environment and the surrounding places too. It could also block sunlight from plants and also produce loud noises that frighten the animals away from their homes. These are all the reasons I ask you to think about what the consequences could be if you established this.

Sincerely,

A 6th grade Student

CHIEF CLERK'S OFFICE

2024 MAR 14 PM 11:15

ON ENVIRONMENTAL QUALITY

To the Chief Clerk at TCEQ,

I am completely against the Black Mountain (Portland) Cement Plant building a new plant in Dorchester, TX. Even though it's great that new jobs are coming. What about the health of the people? I think that people's health should come first. People could die of diseases because of all this polluted air from the plant. Honestly I think the plant should not be built because it can put people's lives at stake.

The reasons why I urge you to not build this plant. My first reason is they should be thinking about the people. My second reason why I am against this plant being built is because it could affect the air and water in which we breathe air and drink water to survive. It could affect the Earth, and the Earth which would get warmer and warmer due to these plants being built around the world. If this keeps happening, then the Earth is basically uninhabitable.

However, in other issues, it's great that all these new things are happening, like jobs sound great and that this is helping those in poverty and financial issues. But have you considered this plant is another provider for pollution? And once again does this company not think or even care about the Earth? Please consider denying their permit.

Thank you for your time,

A 6th Grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 PM 11:15

COMPLAINTS
ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

One nice and peaceful day you drive up on a community with trees everywhere and houses with people going on walks. Everything was going well until you drive closer to an environment with construction of a large cement plant. People started thinking that all the construction was taking over and there would not be enough space for houses and farms for animals. I'm against the Portland Cement Plant in Dorchester Texas, because it's bad for the environment and could hurt animals.

People building more things on open spots like next to churches or behind houses is terrible, because there are people who are trying to sleep and there are animals that are trying to find food, water, and shelter to survive. When there are people building behind homes and churches they make that cement plant bigger and louder. It's making the environment around go away and not want to be there. The Portland cement plant is taking all the cement out of the ground and ripping the nutrients out making it worse for the environment. With all the planting going on is making life harder for people to have houses and places to eat.

It was so nice out until people started construction and tearing things up and making everything worse for the environment. People started thinking that with all the construction going on was making life harder for people because there would not be enough space for houses for people and barns for animals to stay in shelter to survive. I'm against the Portland Cement Plant in Dorchester Texas because it's bad for the environment and could hurt people from not staying under shelter to survive when there are storms going on. With all the construction and Portland Cement Plant is making things harder for people. Stand with the people of Dorchester and do not approve this permit.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

COPIES
ON FILE
QUALITY
CONTROL

To Whom It May Concern:

As you start to walk to school, you spot the towering pillar of ebony smoke only a few blocks away. You cough. All around you, things are the same. Smoke chokes the farm where you live. Your cows have had so many stillborn your father won't even look at the nearly empty field as he trudged off to work at the factory, hacking up his breakfast as he goes. I am against Portland Cement Plant's factory plan because it can cause problems with health, economics, the environment and our overall society.

The smoke that is emitted from the Portland Cement Plants factories generates pollution that has been known to cause fatal diseases such as lung cancer. Although this is bad enough, this factory will hurt neighboring farms' livestock. People and animals living in the area of these factories have been proven to have more stillborn births than in other locations. Fewer cattle means less profit for farmers, which could cause them to fall into poverty. Also related to this is that this could cause problems with wildlife. The bright lights, loud noises, and commotion surrounding the new workplace would scare off many animals. The ones that do remain would constantly be bombarded with fossil fuels, such as oil, contaminating the water we all need. Last, but certainly not least, is the issue of overcrowding. By the time this factory comes up, more and more people will stream in for jobs, turning this place into a city. This would not be a fortunate thing for those who are living here, because more people means more competition for jobs and homes.

I know the Howe and Dorchester area will thrive without the Portland Cement Plant. I don't want people decades from now to look back and go, "What were they thinking?" The quality of people's *lives* are at stake. Let's focus on the well-being of the future mankind. Say no to the Portland Cement Plant!

Regards,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:15

ON ENVIRONMENTAL
COMMITMENT
CITY OF BOSTON

To Whom This May Concern,

Imagine that the skies are clear outside your car window as you go down the road you see black smoke coming from a cement site. You start coughing, and it's so loud that you have to roll up your car window to make it bearable. This is what could happen if we allow the Portland Cement Plant to be built here in Dorchester, Texas. I am against them coming here because it causes a lot of problems. The problems it causes are air pollution, toxic dust. Also it scares the animals away and can make them sick. Finally, it could damage our crops. I am completely against the Portland Cement Plant coming here for these reasons.

Some of the reasons why I'm against Portland Cement Plant coming to Dorchester, Texas is because it can harm the animals. What I mean by harming the animals is that they could try to run away because of the loud sounds. If they breathe in the toxic dust they could get sick. When they get turned into food it can get the people sick and that could give us cancer. Another one of my reasons is that it could damage our crops. If that happens it could cause malnutrition and cause farmers to lose their jobs. My final reason is that Dorchester has a church right next to the land they are wanting to build on. If they were to take up too much land it would lead to more gas being pumped into the air, and also they would be creating even more toxic gas. Since there is a church right next to the cement plant it would disturb the church. These are some reasons why I'm against Portland Cement Plant coming to Dorchester, Texas.

Please do not let Portland Cement Plant come to Dorchester, Texas. I'm totally against them coming here because they cause a lot of problems. They may say that they restore communities, but they are taking natural resources out of the environment that some animals may use to survive. In conclusion I urge you to consider not letting the Portland Cement Plant come to Dorchester, Texas.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

ON ENVIRONMENTAL
QUALITY
COMMITTEE

To TCEQ,

Concrete factories can hurt us. They even hurt animals. It causes air pollution and may hurt the environment, so please consider putting this in another place. Concrete can lead to the development of silicosis or scarring of the lungs, which results in a loss of lung function and severe shortness of breath and can cause illnesses.

Concrete factories cause so much air pollution and concrete is used on such a large scale, it also produces large amounts of heat-trapping greenhouse gasses. Mostly from a manufacturing process that emits carbon dioxide. This can cause illnesses. It will be very loud and disrupt natural environments. It could hurt the plants as well.

This concrete factory could hurt us and animals. It causes air pollution and may hurt the environment, so please consider not approving this permit. Concrete can lead to the development of silicosis or scarring of the lungs, which results in a loss of lung function and severe shortness of breath can cause illnesses. Don't hurt my small town. TCEQ, please consider the Portland Cement plant to be built elsewhere.

Thank you for your time,

A 6th grade Student

CLERK'S OFFICE

CO. 100
ON EIGHT
QUALITY
CENTRAL

To TCEQ,

Would you want to build something that will ruin plants and the grass in Dorchester? I am against the Portland Cement Plant coming to Dorchester, Texas. It would take up a lot of land. It would also take land from animal habitats. This could also create water pollution, and be loud to our community. This building would also take a lot of energy and burn fossil fuels is bad for the environment. This is why I don't want this being built.

I am against the Portland Cement Plant because it could cause air pollution. Air pollution can cause heart diseases and lung cancer. It can also cause water pollution by throwing harmful liquids in the water and also throwing trash. It would also be loud and so bright that it will make animals leave their homes which disrupts the natural environment. It will also bring a lot of people to take up more space. Which would leave no space for the animals to make habitats.

In conclusion I urge you to consider not approving this permit. This plant could do damage to our environment. It could make air or water pollution worse. If you don't want that to happen then please consider denying the Portland Cement Plants permit to build in Dorchester, Texas.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

ON ENVIRONMENTAL
COMMISSION

Dear TCEQ,

Cement companies are important so the world can develop, but there are many harmful effects that outweigh the benefits. Portland Cement Plant wants to build a cement factory in Dorchester, Texas, and I am against it. It's a small town, but the cement factory can make a big difference.

The Portland Cement Plant would drive away wildlife by scaring them with its noise and light. They would pollute the air and add metal to the water which would worsen peoples' health. It would be harder for them to get life insurance because they would be at a higher chance of death. They would have to build new houses/apartments since it would open jobs. That would require more materials, it would cause more traffic, and it would stretch the power and water companies that already shut off in the summer and winter. The people near cement plants now hate it, and you would too.

I ask you to consider how many other harmful effects the Portland Cement Plant could have on the environment and you. It may not ever go back to how it was before the cement plant was built. The Portland Cement Plant shouldn't be built, but that's for you to decide. You could make a big difference in a lot of peoples' lives.

Sincerely,

A 6th grade Student

CHIEF CLERK'S OFFICE

COMMISSION
ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

What would you do if you saw a big cement plant put in your town? I am against the Portland Cement Company putting a plant in my town. At some cement plants they can cause health conditions, roadblocks, and air pollution. I am against the fact that the Portland Cement company is building a plant in Dorchester because of the issues it would cause.

One reason why I do not want Portland Cement company to put a cement plant is it would be very noisy and bright because of all the lights and conveyor belt noises. Another reason is it can cause air pollution. Some pollutants that are released are Sulfur Dioxide and lead. These pollutants can cause health impacts. A really big reason I do not want the plant to be added is because it can scare away animals from their habitats. Lastly the cement plant can cause water pollution by surface runoff. These are all reasons why I am against the cement plant to be added to Dorchester.

I ask that you consider how harmful this plant would be to animals who live in and their habitats near where the plant would be added. A main reason why I am against the cement plant coming is because the air pollution will be very bad. I hope you might consider my opinion of why I am against the Portland Cement Plant putting a Cement plant in Dorchester, Texas.

Sincerely,

A 6th grade Student

ENVIRONMENTAL
QUALITY
NO

To whom this may concern,

Think about waking up to loud noise in the morning. The question is why is this important? I do not want the Portland Cement Plant to come to Dorchester, Texas. One reason I do not want them to come is it will be very loud and obnoxious. Another reason I do not want them to go there is because it causes air pollution. No one would want to wake up to bad smelling air and loud noises.

More reasons I do not want the Portland Cement plant to come to Dorchester are air pollution, water pollution, and messing up natural habitats. This is a big issue for me because I live close to Dorchester and one of my friends lives in Dorchester. Another reason I do not want this to happen is because a lot of people will complain about it being too loud. I'm sure no one will want to hear all of that. Besides, it is really bad for the environment.

All in all, the Portland Cement plant should not come to Dorchester. Plus I don't think anyone would want to wake up to loud noises. I don't think I would be able to sleep, and I'm young I need sleep. Please do the right thing and help our small town. How you can help is by protesting on this subject.

Sincerely,

A 6th grade Student

GOVERNMENT

To the Chief Clerk at TCEQ,

Could you imagine a big place called a factory with lots of dust and a lot of smoke? Well I do not want this to be a reality in Dorchester, please consider not building this plant. If the Portland Cement plant was here it would cause lots of negative impacts to happen to a lot of people. For example it could cause health problems affecting your eyes, nose, and skin. It can also be very bad for the environment. That's why I'm against the Dorchester plant.

Some reasons why I'm against the cement plant is because of how it can affect the environment. The way it could affect those things is because all the chemicals that the cement plant is going to have are bad. It can affect the environment because there might be many animals around it, and the animals can start getting sick. It could also affect your health including your skin, nose, and eyes. The Portland cement plant could affect many things negatively impact your health and could cause people, and animals to get sick. Due to these issues I urge you to consider declining the permit for the Portland Cement plant.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

COMMUNITY
ON ENVIRONMENTAL
QUALITY

To TCEQ,

Imagine you're in a beautiful small town that has a lot of vegetation and animals, and out of nowhere a big factory is built and all the animals go away and the sky is filled with smoke. I am against building the Portland Cement plant because it will cause all the animals to go somewhere else because of the noise and pollution. The reason I am against building it is the air pollution will affect all life in that area and maybe other places too. I don't want the plant because it will cause a lot of air pollution and will make people's health bad.

I am against the building of the Portland cement plant because it will cause animals to relocate. The people that live there will not get much sleep because of the noise that the machines make which would affect their health because if you don't get sleep your brain does not rest. The pollution makes people that are sick worse and makes people sick because of the kiln cement dust in the air. It is bad for the plant because the cement that is made will make buildings and that means that plant will be cut down. It is also bad because the pollution to the water will affect everything because the kiln cement dust will go to the water and the rain would be contaminated and that will affect the plants, animals, and people. This is the reason I do not want this for everyone's sake.

I am against the building of the Portland Cement plant because it is very bad for the environment and the people around it. It is bad for the environment of the town because it could cause air pollution. It could cause soil pollution which will cause all the animals to get sick. This is why I don't want it to be built, so please consider my thoughts.

Consider It,

CONFIDENTIAL
ON ENVIRONMENTAL
QUALITY
COMMISSION
TEXAS

To the chief clerk at TCEQ,

What would you do if you got disturbed by a company ruining your habitat or being noisy when you wanted a peaceful time? I don't agree with the Portland Cement Plant coming to Dorchester, TX. In Midlothian, Texas there is a plant, and people have been complaining about the sounds and how they affect their lives.

There is dust flying in the air due to raw material handling, limestone crushing, grinding cement, and power utilities. The dust that was flying around in the air would irritate people's eyes and make their eyes start to burn. If people have asthma it can affect even more people, or it could be worse and cause redness to eyes, or blindness. When people live close by it can make lots of noise. This is because it is induced by blowers.

I don't agree with the Portland Cement plant coming to Dorchester, because it can have some negative effects. Like being too noisy or hurting habitats. This is because in Midlothian, Texas there are already lots of complaints, and their complaints are like it's too loud or it's affecting their asthma. This happens to a lot of sensitive people.

Best wishes,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:14

ON ENVIRONMENTAL

To TCEQ,

As you drive through a town to go to work a bunch of dust comes out of nowhere because a giant cement factory was built. I'm against the Portland Cement company being built as it can cause lots of problems as we are dealing with some right now. We don't need Portland Cement here because the factory will not help our problems with water and air pollution. I don't think they really care much about the environment because they are destroying it. This place will also cause more water, and air pollution which we are already dealing with because of the pandora factories in Sherman. I am against Portland Cement being built because of all the problems it will give us.

I am against this company being built here because Portland being here is affecting our whole county and making the problems we have worse. This factory being built here is going to cause more air and water pollution in our area. This factory also is destroying the wildlife around us and animals will get scared and leave their homes. If they move here lots of space is gonna be taken up which we could use to preserve the land for animals and help with homes for them. I don't think that Portland should be built here because of the pollution that it will cause. It will also destroy our wildlife which is a very bad thing. It also takes up a lot of space that we could've used.

I ask that you consider approving my opinion because the factory could destroy our wildlife and us. This factory shouldn't be here because of the pollution it will bring to an already polluted area and more won't help. This place could destroy our wildlife and their homes or scare them away. These are the reasons why I don't think Portland should be here. I really think you should consider this essay because we really don't need a giant factory here creating pollution in an area that has been polluted.

Please Consider This,

A 6th grade Student

CHIEF CLERKS OFFICE

ON ENVIRONMENTAL
QUALITY
COMMISSION

Dear TCEQ,

I don't want the Portland cement company to come to Dorchester, Texas, because it causes a lot of health problems. The plant takes a lot of land from plants and animals. It uses a lot of electricity, metal, and other materials that could build other things. I don't want this to come to Dorchester because it's bad for the community.

These are the reasons why I don't want this plant to come. This cement plant causes a lot of problems. Also howe is really close to Dorchester so what happens to Dorchester will happen to our community. Many people have made complaints about this plant. This plant also makes a lot of noise and they are trying to put it close to a church.

This plant is going to be a big problem. Dorchester is really small therefore all of the bad things that are going in the air will spread really fast. This will harm the wildlife. Please consider this before approving this permit.

Thank you for your time,

A 6th grade student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:13

ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

You can see a landscape with trees, grass, and animals, all of a sudden you see gray or black smoke fill the air and everything is covered. I'm against the Portland Cement Plant coming to Dorchester, Texas. If you build the factory in the landscape with plants it would kill them. The factory would also scare all the animals that live in the area away and it would cause them to have problems. That's why I'm against the Portland Cement Plant coming to Dorchester, Texas.

I'm against the cement plant factory because it will cause air pollution from the dust sent into the air. The first reason I'm against the cement plant factory is because animals that are in the area will be scared off by the loud noise because there will be a lot of noises and the construction will be loud building the factory. The second reason I'm against the cement plant is because it will be bad for the environment. The third reason I'm against the cement plant factory is because it is taking up too much land that farmers can plant their crops on and if the farmers do have crops already the crops will all die. The fourth reason I'm against cement plant factory is because it can cause people to have a hard time breathing and can cause death from the dust and smoke.

I'm against the cement plant factory being built because if you think about it we already have a lot of factories in Texas. If we add any more we would have some problems with the environment. The cement plant factory shouldn't happen because it's bad for our environment, and it will cause air pollution and that's bad for the animals and people who live by the factory so please do not put the factory in Dorchester, Texas.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

COMMUNICATIONS
ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

I live in Dorchester and the Portland Cement Plant coming in would ruin my home. Dorchester has many animals and good soil and with the Portland cement plant coming in would ruin the animals habitat. In my opinion they don't need to come to Dorchester. Dorchester is a perfect town and with the Portland Cement Plant it will cause so many problems. Some problems could be air pollution, water pollution, and soil pollution. In my opinion I do not think the Portland Cement Plant should come.

Some reasons why I think that the Portland Cement Plant should not come to Dorchester are that it could cause soil pollution and water pollution. Soil pollution can happen from the bad fumes that come in the air from the Portland Cement Plant. Soil pollution would be bad because Dorchester grows many crops, and with the soil pollution we would not have as big of a harvest as usual. Many people in my town use the crops they grow for food in their family. Another reason is Dorchester has a lot of cows and with the water pollution from the Portland Cement Plant the cows would have contaminated drinking water, and we could have a huge mass mortality event. The water and soil pollution from the Portland Cement Plant would be terrible for Dorchester.

I strongly believe that the Portland Cement Plant should not come to Dorchester. The animals, the people, and the environment will all be hurt if the Portland Cement Plant comes to Dorchester. My town is so small that if you approve it will make a big impact on all of us so please don't let them come to Dorchester.

Sincerely,

A 6th grade student

CHIEF CLERKS OFFICE

CONFIDENTIAL
ON ENO
CLERK
CLERK

Dear TCEQ,

Have you truly thought about the things that are in the environment and what would happen if you dig up and destroy the area of land. The Portland Cement plant might cause damage to what is around it. This is why I am against the Portland Cement plant coming to Dorchester, Texas.

I don't want the Portland Cement plant to happen because it can cause air pollution when all the dust from the rocks spreads into the air, and it can cause people to get sick. Another reason I don't want this to happen is because for people who have asthma when stuff goes into the air it can damage their lungs and might make the illness worse. The last reason I don't want the Portland cement plant to happen is because it will damage the environment, and it might cause all the animals that live there to leave and find another place to go. These are the reasons why I don't want the Portland cement plant to happen.

As a result, if dust from the rocks spreads into the air it may cause people to get sick. For the people who have asthma if the dust from the rocks in the air causes lung disease or gets them really sick this is exactly why I am against the Portland cement plant. It can also damage the environment and it might cause the animals that live there to leave and they might not have another place to go. This is why you should consider these thoughts, and do not build the cement plant.

-An Anonymous 6th grade Student

CHIEF CLERKS OFFICE

2020 MAR 14 AM 11:13

COMMUNICATION
ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

Portland Cement plant will be working on bringing more cement for more buildings. They are working forward for lots of buildings in a small area that can change the earth forever. I am against the Portland Cement plant because they will be taking away animals' homes and force them to move. Another reason why I am against this plant is because all of the cement that makes dust can make people sick and pollute the air and water. The water is already polluted enough and so is the air. I am against the Portland Cement Company, it will pollute the air, bring more people in this area and scare animals away, and pollute the air, water.

I do not want the plant to come because it can damage the city or the Earth. Water pollution is caused by this plant, and air pollution could both be caused by this plant. This plant can release kiln cement dust that can make people have cancer, asthma, and can kill people. The Portland Cement Company will take away animal's homes. The plant is going to be very loud and use a lot of lights that can be very disturbing to the animals and people living in the area. This plant will bring in lots of people into a very small town that can cause overpopulation and it can make the air toxic with all of the cars driving. Allowing this to happen will cause a lot of damage to the Earth and our area.

I am against the Portland Cement company because they cause air pollution and water pollution. The cement plant can also cause dust that makes people sick and have cancer. The Portland Cement company will bring more people into small areas that can get overpopulated and be a bad place to live in with loud noise and bright lights. This can change the earth forever with the harmful effects that are made by this plant, so I advise that you say no to the Portland Cement company too.

NO ENVIRONMENTAL
QUALITY
CONCERN

To Chief Clerk at TCEQ,

Did you know that cement plants can cause birth defects? I'm against the Portland Cement Plant coming into our environment. I'm against it because they can cause birth defects, air pollution, water pollution, and disruptions to the environment. It could also cause health issues like lung cancer.

I'm against the Portland Cement Plant coming into our environment because of the causes listed. My reason for being against the Portland Cement Plant is that it can cause air pollution. Inhaling toxic metals and chemicals is what can cause birth defects. A chemical called Sulfur Dioxide can affect breathing and cause respiratory problems. Air pollution can be caused by burning of fuels. The chemicals come from the burning of fossil fuels that the plant uses. Cement needs a lot of water to form, and the admission runoff has toxic chemicals, so that is the cause of water pollution. Water pollution is bad because it damages the water that we drink. It can also be a disruption to the environment because of the loud noise coming from the plant. This is why it is not a good idea to bring the plant to our environment.

In conclusion, they should not bring the Portland Cement Plant to Dorchester, because it will harm the environment. It has many cons for it coming here. Also it will cause many problems with the people that live in this area. Please take this into consideration when passing this permit.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 19 AM 11:13

CONFIRMATION
ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

The town of Dorchester will be affected by this evil Portland Cement plant, it could kill many and ruin a lot of animals' homes. From a sixth grader's perspective of the Portland Cement plant dilemma, I am against them building their building here. It is bad for the environment if they build here. It would ruin the air quality, it could also cause birth effects, lung disease or cancer, and could ruin someone's hearing from the loud noise. I do not think that the Portland Cement plant should be built here.

Some of the reasons I am against this is because the cement plant will send chemicals into the air. Which may make many have lung disease or cancer which may cause them to die. Another reason is that some who live near the plant will hear the loud noises and their hearing may become worse. It will bring people in. They'd have to make more houses and apartments, which would destroy many animals' homes.

In conclusion I think that you should not allow for the Portland Cement Plant to be built here. I urge you not to allow for a place that would disturb those who live there, make them sick, and destroy innocent animals' homes. It would ruin this poor small town. Please, I am asking you, do not build the Portland Cement Plant.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:13

COMMISSION
ON ENVIRONMENTAL
QUALITY

To the Chief Clerk at TCEQ,

When you're driving in the car, you see a black cloud and the closer you get to your destination the black cloud gets bigger. You realize it's coming from a cement plant. I am against building the Portland Cement plant in Dorchester, Texas because they could disrupt the environment with noise and lights. This can make the animals living there want to leave. I am against them building the cement plant because those cement plants can ruin the environment by causing air pollution and that causes a lot of harm to the planet. The cement plant causes a lot of harm to the earth. This can be very bad because they can pollute the water and the air, when they pollute the air that can make it harder to breathe.

I am against the cement plant being built here because they can harm the earth in many ways. They rip the grass to build the cement plant in that specific place which can also make the animals living there want to leave their home. These cement plants can also pollute the air which is really harmful to the earth. Since these cement plants have all the lights on all the time day and night people might complain because they can't sleep. Cement plants are not only harmful to the earth but they can be harmful to humans, which is why I do not want the cement plant to come to my area.

In conclusion, I am against the Portland Cement plant because they can harm the earth, the animals, their homes, and sometimes even us. The Portland Cement plant is harmful to us because they can pollute the air. This can be a very bad thing because it could make us sick. This can also pollute the water which affects the water we drink and cook food with. If they pollute the air and water this could harm a lot of people. If we don't want the air and water being polluted and the animals' homes being destroyed then we should try to help stop the Portland Cement plant from coming here by writing a letter like this one.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:13

CONFIDENTIAL
ON ENVIRONMENTAL
QUALITY

To whom it may concern,

With the environment that surrounds us I think it's safe to say that change is for the worse because it can disrupt the ecosystem. For example a cement plant can cause air and water pollution. I am one of the many people who believes that moving a cement plant to Dorchester is a bad idea because of its effects on the environment. One of the many reasons why I believe that moving a cement plant to Dorcehster is a bad idea is because the cement plant will cause water and air pollution that will affect us and animals. The cement plant will also be loud which can bother people and animals that are nearby. I believe that the idea of moving a cement plant to Dorchester is not very good, because of the bad effects it would have on the environment.

I'm against the idea of moving a cement plant to Dorchester because of the many problems it will cause like loud noises, water pollution, and air pollution. With the loud noises that the cement plant would produce it would bother all people and animals that are nearby causing stress, disruption in communication, and make concentration difficult. The cement plant would cause air pollution which is already a problem and with the cement plant being built it would just worsen it. The air pollution would make it where animals and people would have breathing problems and could alter people's already existing breathing problems. The cement plant would also cause water pollution which can lead to various health issues and can disrupt the balance of ecosystems.

With the various health issues the Portland Cement plant would cause, I'm against it. I don't want this plant to be built because of the health issues caused by air pollution, water pollution, and loud noises. I want you to think over the effects of the cement plant, because I really want us to be capable of stopping this.

Regards,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:13

GOV. OF MASSACHUSETTS
DEPT. OF ENVIRONMENTAL
QUALITY

Dear TCEQ,

Do you really think it is a good idea to put in Portland Cement Plant that will be harmful to the environment? I'm against the cement plant because it can lead to serious health problems. "Clement kiln dust can cause temporary irritation to the eyes, skin, and the nose." It can make animals go elsewhere because the noise and their homes are being destroyed. In my opinion the cement plant would be a bad idea.

I'm against the cement plant because it is harmful to the environment and humans as well. Cement can destroy animal habitats. The cement plants burn up all the fossil fuels for energy and creates air pollution. The dust from the rocks being smashed can get in the body and cause cancer. The machines that they use to smash the rock are very noisy. It can cause lots of noise complaints near the church, and they need their peace when it comes to a church.

In conclusion, I am against the Portland Cement Plant because it is a bad idea to put something harmful in the environment. This can also lead to air pollution which is bad for the earth. This is why I'm against the portland cement.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:12

TEXAS
COMMISSION
ON ENVIRONMENTAL
QUALITY

Dear Chief Clerk,

Have you heard about the Portland Cement plant coming to Dorchester, Texas? I am against the plant coming because there are a lot of things cement plants can do to harm the environment. One of the ways cement plants can harm the environment is that it causes air pollution, and air pollution can cause things like breathing problems. Cement plants also make a lot of people come to a certain place, and if there are farmers in that area then their land for crops is reduced. The last reason I am against cement plants is because it also causes water pollution and we all know that water pollution is bad for fish and other marine animals. The Portland Cement plant should not come here and I hope you agree with me.

One of the ways the cement plants can harm the environment is it causes air pollution. Air pollution can cause things like breathing problems. I suffer from Asthma and a plant like this coming here could be horrible for my health. Cement plants also make a lot of people come to a certain place and farm land in Dorchester would be destroyed to make more homes. If the growth of crops is reduced then it will affect the amount of food we have. Water pollution is another concern with the cement plant. This can kill our fish and other marine animals. It is also bad for us as citizens because it could contaminate our water sources.

I am against the Portland Cement plant coming because there are a lot of things cement plants can do to harm the environment. The health of myself and others that have Asthma or other breathing issues could be negatively affected by this. The long term effects that this plant could have on our community and environment is not worth risking. I hope that you will take this into consideration and hear our voices.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:12

COMMITTEE ON ENVIRONMENTAL QUALITY
TEXAS

To whom it may concern,

Imagine looking for a new place. You search in Howe and suddenly, you can't breathe. This is because there is a huge cement plant with a lot of air pollution. Cement plants can be good, but they can also hurt our environment. They give off a lot of air pollution. It can also hurt peoples health. It can cause irritation in skin and eye, and can also cause cancer.

Cement plants hurt the environment by causing air and water pollution, kicking animals out of their homes, and sometimes affect us too. They kick out animals because they are very big, noisy and produce a lot of light. It can affect us because of that too. Due to the pollution, it can be harder to breathe, and the water can be more polluted. And, people can become sick just by breathing or touching the dust that the machines make.

As you can see, we don't need the cement plant in Dorchester. Personally, the cement plant just brings more problems to our area, and we don't want that. You will be kicking animals out of their habitats, and you will pollute the air and water. If you don't get sick with all the pollution, then you will get sick from the cement dust.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE
2024 MAR 14 AM 11:12
COMMISSION ON ENVIRONMENTAL
QUALITY

To may it whom concerns,

If the Portland Cement plant comes, it will affect the animals and their habitat. This can lead to farmers losing their jobs because it is taking up a lot of farmland to where they can't grow crops. This could affect people's families including mine in fact. The ground would get torn apart. They would ruin the environment and air pollution could be caused by this situation. That's why I think that it would be a bad idea if the Portland Cement plant comes to Dorchester, texas.

I am against this because they will tear the environment up. All the grass will turn into concrete. The animals' wildlife will be gone because they won't have any environment to live in. If we don't have animals we won't have food, milk, or meat. People will starve! These are my reasons I think that it would be bad for the Portland Cement plant to Dorchester, Texas.

I am against the Portland Cement plant coming to Dorchester, Texas. Dorchester is small and this would change the town only making it worse. The Portland Cement plant is a big company and it will take up a lot of space with electricity too. This is why I am definitely against this. Please consider these thoughts before approving this plant.

Thank you,

A 6th Grade Student

CHIEF CLERKS OFFICE

COMMISSION
ON ENVIRONMENTAL
QUALITY

Chief Clark at TCEQ,

Imagine if you are driving home from a long day of school. All you want to do is sleep but there is a loud noise going nonstop. I am against the Portland Cement plant, because they will run all the wildlife out of their homes. Animals will be bothered by all of the noise and will leave their homes. Other animals will be running out of their homes because they won't have the right food. I am against the Portland Cement plant because the environment for the animals could be horrible.

I am against the Portland cement plant because it will be so loud and the people around it will hardly get any sleep. On top of that it will have so many lights on it that at night it will probably look like the sun. The animals will be affected by this because they won't have the proper environment for food. It will take up a lot of room so where are they going to build the things like new houses. The air will be bad because the Portland Cement plant will release chemicals in the air that pollute the air making it bad to breathe. When you breathe it can lead to health issues in the future.

I'm against the Portland cement plant because it is bad for the air, for the animals, and for the people around it. People can have health problems due to the air we breathe. The animals will not have the proper ecosystems because the plant will take up a lot of room to build it. The people there won't want to listen to the Portland Cement Plant all day or all night. I am against the Portland Cement Plant so we can have good air to breathe and the animals will have the proper ecosystems.

Sincerely,

A 6th grade Student

ON ENVIRONMENTAL

To whom it may concern,

Imagine a land full of grass, flowers, animals, and beautiful clear skies. Then, imagine a company coming and destroying it all. That's exactly what the Portland Cement Plant is trying to do to Dorchester. That's why I am against them coming to Dorchester. If they go through with this they will negatively affect the environment, ruin the air quality, make animals migrate, and cause a rise in lung disease, and still born birth.

Some of the reasons I am against this is because Dorchester is a quiet town. The majority of the people that live there are elderly people trying to settle down. Plants are loud and that would cause a lot of people to move. Secondly, building a plant there would drive out animals. Therefore, ruining the environment and causing the land to become overgrown. Because there are no animals eating the grass. Also the plant would emit pollutants that ruin the air quality, and that would cause a rise in lung diseases. All of these are reasons why we should not allow this plant to be built.

In conclusion, I am against Portland Cement building their plant because the plants are loud and that disrupts the animals. When animals are disrupted they get scared and they migrate. Also if they build the plant they will have to destroy a lot of plants and habitats. Lastly, the plant would give off bad gasses that cause a vast amount of diseases. To sum it up, I am against this because it will ruin a lot more than just the landscape. Please take my letter into consideration.

In regards to,

A 6th grade Student

ON ENVIRONMENTAL
QUALITY
COMMISSION

Dear TCEQ,

I am against the Portland Cement plant being build because of the damage it could do to animals. We have to take care of animals and their habitats. For example the animals in the wild might die because there is no food around the plant due to the noise. It may even happen to people, they might have to leave their homes because of the cement dust and the loud sounds of construction.

For instance owls or birds if you cut their tree they won't have a place to live. That's why I'm against the build, because it's sad to lose your home. The cement can ruin the environment of the animals. All the noise is going to force the animals to leave their homes. It can destroy their homes and kill their source of food. Sometimes it can even kill animals, people, and plants.

Since the animals would leave and/or die because of the cement. I am against the Portland Cement plant being built. The cement can ruin the environment of the animals. All the noise is going to force the animals to leave their homes. It can destroy their homes and kill their source of food. Sometimes it can even kill animals. Please stand with me in protecting these innocent animals.

Sincerely,

A 6th grade Student

COMMISSION
ON ENVIRONMENTAL
QUALITY

To the TCEQ,

Think of the beautiful Texas landscape with trees, flowers, and beautiful lakes. Now as you drive further and further you see smoke and a massive building. I believe the Portland Cement plant should not be built. The reason why is because I believe the cement plant would be bad for the environment around it. Another reason why I believe that the plant should not be built is because it could be bad for our health. Building the Portland Cement plant would be bad for the environment and people's health.

One reason why the cement plant would be bad is because it would disrupt the natural environment like the animals and plants. Another reason why it shouldn't be built is it could harm the animals in the area. For example when building the plant they might use up space that the animals called home. Another reason the plant shouldn't be built is because it would be really loud. Imagine you live in the area and you're sleeping and all you hear is a loud buzzing sound. These examples are why the cement plant would be a bad idea because it would impact the environment in a negative way.

In conclusion, building the cement plant would be very bad for the environment and could harm animals and plants alike. Think of the animal's homes that would be destroyed for the building of this cement plant. Overall, I believe that building the cement plant would be a bad idea. Please consider not building the Portland Cement Plant.

Sincerely,

A 6th Grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:11

TEXAS
COMMISSION
ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

Why should the company Portland cement plant not be built in Dorchester? I think that they should not allow this because it will cause air pollution. People that have asthma will have a hard time breathing, and it could also cause water pollution. That is bad because animals drink dirty water so that means that they could get sick and die. I think that they should not do it because it would affect the environment with air pollution and water pollution that could be bad for animals and humans.

I think that they should not build the cement plant because it could affect the air. Causing air pollution can cause people to have trouble breathing. Also it causes water pollution and animals that drink from a body of water would be drinking dirty water. Water pollution could happen because dirty chemicals would go into the water. Also it would be loud and bright and animals would leave the area because they are afraid. This plant is bad because a bunch of stuff will harm the earth.

I think that they should not build the Portland Cement plant because it will cause air pollution. It will cause water pollution, so the water would be dirty. Also it would be too loud for people to sleep and do other activities quietly. There would be too much light so that would increase in carbon dioxide. There would be too much stuff that would harm the earth in a bunch of ways. Please consider this before allowing the plant to be built here.

Sincerely,

A 6th grade Student

CHIEF CLERKS OFFICE

2024 MAR 14 AM 11:11

TEXAS
COMMISSION
ON ENVIRONMENTAL
QUALITY

Dear TCEQ,

Imagine if the environment is harmed and there is air pollution and water pollution. This could be the reality if we let the Portland cement plant come. I think that the environment is more important than the economy. I am against the Portland Cement plant moving to Dorchester because it would affect animals' homes, cause health problems, air pollution, and water pollution.

Consider not allowing the plant to be built because it causes air pollution, water pollution, and destroys natural habitats which affects the environment and can harm wildlife animals. The Portland cement plant causes air pollution because of the burning of the rock cluster. The Portland cement plant causes water pollution. Another reason is the Portland Cement plant causes harm to wildlife animals and wildlife environments. They burn fossil fuels which are harmful and could cause plants to die.

I am not for the Portland Cement plant because of the issues it causes. The reason why it causes air pollution is because they burn fossil fuels and the smoke from it can be polluted into the air and cause sickness and diseases. The next reason it causes water pollution is because the dust getting into our water supplies could harm animals and fish. Please consider this before approving this plant to be built.

Sincerely,

A 6th grade Student

Black Mountain Kiln, Dorchester, Texas

Testimony of Kent Sharp, President

Sherman Economic Development Corporation

Good evening, my name is Kent Sharp and I am the President of the Sherman Economic Development Corporation in Sherman, Texas. Our mission is to grow and diversify the economy of Sherman and the surrounding area through the addition of new jobs and investment of primary employers. Since 1996, SEDCO has focused on a mission and strategy to grow the primary employment sector — those companies with statewide, national, and global markets. In November 2021, Texas Instruments announced the largest economic development investment in the history of Texas: a 30 billion dollar, 300mm semiconductor chip plant to be built in south Sherman. Just seven months later, GlobalWafers announced a 5 billion dollar economic development investment in south Sherman as well: a 300mm silicon wafer production facility, the likes of which have not been made in the United States in over 20 years, and is vitally important not only for Texas' leading role in semiconductor investment, but also for national security interests - as this company will be the sole domestic supplier of advanced node, 300mm silicon wafers in the entire United States. As well, we have two other semiconductor companies operating in Sherman, Coherent Corporation and GlobiTech Corporation, each having invested hundred of millions of dollars in Sherman, Grayson County and Texas.

Each of these companies, as well as many other manufacturers in Sherman and Grayson County, have expressed grave concerns over the potential location of a new cement kiln and mining operation less than 5 miles from their facilities. Each of the companies mentioned above, Texas Instruments and GlobalWafers, are doing their projects in four phases, with each company nearing the completion of Phase 1 of their respective investments. The approval of a cement kiln and mining operation, ESPECIALLY where blasting is being approved in the TCEQ permit, puts at great risk the companies completing the remaining 75% of the combined \$35 Billion investment – that could amount be over \$26 Billion of currently planned investment NOT being placed in the State of Texas. Is a cement kiln and mining operation in Grayson County really worth losing this amount of money, thousands of jobs, not to count the thousands of hours of time, energy and effort put in the last 3 years by local and state leaders to compete to get this investment to Sherman, Texas in the first place?

I would urge TCEQ to deny the permit submitted by this company at this location. Thank you for your time and consideration this evening.

C. Alternate Language Publication

In some cases, public notice in an alternate language is required. If an elementary or middle school nearest to the facility is in a school district required by the Texas Education Code to have a bilingual program, a bilingual notice will be required. If there is no bilingual program required in the school nearest the facility, but children who would normally attend those schools are eligible to attend bilingual programs elsewhere in the school district, the bilingual notice will also be required. If it is determined that alternate language notice is required, you are responsible for ensuring that the publication in the alternate language is complete and accurate in that language.

Is a bilingual program required by the Texas Education Code in the School District?	No
Are the children who attend either the elementary school or the middle school closest to your facility eligible to be enrolled in a bilingual program provided by the district?	No

D. PSD and Nonattainment Permits Only

If this is an application for emissions of GHGs, select either "Separate Public Notice" or "Consolidated Public Notice". Note: Separate public notices requires a separate application.	Consolidated Public Notice
---	----------------------------

We must notify the applicable county judge and presiding officer when a PSD or Nonattainment permit or modification application is received. This information can be obtained at the link below:

<https://www.txdirectory.com>

Provide the information for the **County Judge** for the location where the facility is or will be located.

The Honorable:	Bill Magers
Mailing Address:	100 W. Houston

<u>TITLE 30</u>	ENVIRONMENTAL QUALITY
<u>PART 1</u>	TEXAS COMMISSION ON ENVIRONMENTAL QUALITY
<u>CHAPTER 39</u>	PUBLIC NOTICE
<u>SUBCHAPTER K</u>	PUBLIC NOTICE OF AIR QUALITY PERMIT APPLICATIONS
<u>RULE §39.605</u>	Notice to Affected Agencies

(1) when newspaper notices are published under this section, the applicant shall furnish a copy of the notices and affidavit to:

- (A) the EPA regional administrator in Dallas;
- (B) all local air pollution control agencies with jurisdiction in the county in which the construction is to occur;
- (C) the air pollution control agency of any nearby state in which air quality may be adversely affected by the emissions from the new or modified facility; and
- (D) if notice is for an application filed on or after the effective date of this section for a Prevention of Significant Deterioration or Nonattainment permit under Chapter 116, Subchapter B of this title (relating to New Source Review Permits), the chief executives of the city and county where the source would be located, and any State or Federal Land Manager, or Indian Governing Body whose lands may be affected by emissions from the source or modification;
- (2) when sign posting is required under this section, the applicant shall furnish a copy of sign posting verification, within 10 business days after the end of the comment period associated with the notice under §39.418 of this title (relating to Notice of Receipt of Application and Intent to Obtain Permit), to:
- (A) the chief clerk;
- (B) the executive director; and
- (C) those listed in paragraph (1)(A) - (C) of this section; and
- (3) when alternative language waiver verification are required under this section, the applicant shall furnish a copy to those listed in paragraph (2)(A) - (C) of this section.

01972

the hearing required by the first sentence of this paragraph.

(2) Each implementation plan submitted by a State under this chapter shall be adopted by the State after reasonable notice and public hearing. Each such plan shall--

(A) include enforceable emission limitations and other control measures, means, or techniques (including economic incentives such as fees, marketable permits, and auctions of emissions rights), as well as schedules and timetables for compliance, as may be necessary or appropriate to meet the applicable requirements of this chapter;

(B) provide for establishment and operation of appropriate devices, methods, systems, and procedures necessary to--

(i) monitor, compile, and analyze data on ambient air quality, and

(ii) upon request, make such data available to the Administrator;

(C) include a program to provide for the enforcement of the measures described in subparagraph (A), and regulation of the modification and construction of any stationary source within the areas covered by the plan as necessary to assure that national ambient air quality standards are achieved, including a permit program as required in parts C and D;

(D) contain adequate provisions--

(i) prohibiting, consistent with the provisions of this subchapter, any source or other type of emissions activity within the State from emitting any air pollutant in amounts which will--

(I) contribute significantly to nonattainment in, or interfere with maintenance by, any other State with respect to any such national primary or secondary ambient air quality standard, or

(II) interfere with measures required to be included in the applicable implementation plan for any other State under part C to prevent significant deterioration of air quality or to protect visibility,

(ii) insuring compliance with the applicable requirements of sections 7426 and 7415 of this title (relating to interstate and international pollution abatement);

(E) provide (i) necessary assurances that the State (or, except where the Administrator deems inappropriate, the general purpose local government or governments, or a regional agency designated by the State or general purpose local governments for such purpose) will have adequate personnel, funding, and authority under State (and, as appropriate, local) law to carry out such implementation

Are the children who attend either the elementary school or the middle school closest to your facility eligible to be enrolled in a bilingual program provided by the district?	No

D. PSD and Nonattainment Permits Only

If this is an application for emissions of GHGs, select either "Separate Public Notice" or "Consolidated Public Notice". Note: Separate public notices requires a separate application.

Consolidated Public Notice

We must notify the applicable county judge and presiding officer when a PSD or Nonattainment permit or modification application is received. This information can be obtained at the link below:

<https://www.txdirectory.com>

Provide the information for the **County Judge** for the location where the facility is or will be located.

The Honorable:	Bill Magers
Mailing Address:	100 W. Houston
Address Line 2:	Suite 15
City:	Sherman
State:	Texas
ZIP Code:	75090

Provide the information for the **Presiding Officer(s)** of the municipality for this facility site. This is frequently the Mayor.

First Name:	David
Last Name:	Smith
Title:	Mayor
Mailing Address:	373 Main Street
Address Line 2:	
City:	Dorchester
State:	Texas
ZIP Code:	75459

Are the proposed facilities located within 100 km or less of an affected state or Class I Area?

No / More research Wildlife Management

- (1) The concentration permitted under the national secondary ambient air quality standard, or
- (2) The concentration permitted under the national primary ambient air quality standard, whichever concentration is lowest for the pollutant for a period of exposure.
- (e) **Restrictions on area classifications.** The plan shall provide that—
 - (1) All of the following areas which were in existence on August 7, 1977, shall be Class I areas and may not be redesignated:
 - (i) International parks,
 - (ii) National wilderness areas which exceed 5,000 acres in size,
 - (iii) National memorial parks which exceed 5,000 acres in size, and
 - (iv) National parks which exceed 6,000 acres in size.
 - (2) Areas which were redesignated as Class I under regulations promulgated before August 7, 1977, shall remain Class I, but may be redesignated as provided in this section.
 - (3) Any other area, unless otherwise specified in the legislation creating such an area, is initially designated Class II, but may be redesignated as provided in this section.
 - (4) The following areas may be redesignated only as Class I or II:
 - (i) An area which as of August 7, 1977, exceeded 10,000 acres in size and was a national monument, a national primitive area, a national preserve, a national recreational area, a national wild and scenic river, a national wildlife refuge, a national lakeshore or seashore; and
 - (ii) A national park or national wilderness area established after August 7, 1977, which exceeds 10,000 acres in size.
- (f) **Exclusions from increment consumption.**
 - (1) The plan may provide that the following concentrations shall be excluded in determining compliance with a maximum allowable increase:
 - (i) Concentrations attributable to the increase in emissions from stationary sources which have converted from the use of petroleum products, natural gas, or both by reason of an order in effect under section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) over the emissions from such sources before the effective date of such an order;

About Us

Image Details

Hagerman National Wildlife Refuge was established in 1946 to provide habitat for migratory birds, wildlife, and plants native to the area. The 11,320-acre refuge is an overlay of the Big Mineral Arm of Lake Texoma. Shallow marshes, creeks, bottomland hardwoods, forested uplands and grasslands, and managed farm fields provide habitat for more than 300 species of birds and many varieties of wildlife. Western areas of the refuge are within the unique Cross Timbers Ecoregion which features stunted, gnarly-shaped post oak and blackjack oak trees that are much older than they appear.

Around 230,000 visitors annually come to the refuge for wildlife observation, photography, hiking, fishing, hunting, and interpretive and educational programs.

Spring

In March, spring heralds the beginning of a significant transition period. As [monarch butterflies](#)  begin arriving from Mexico on their northerly migration, thousands of migratory shorebirds stop over to feed in refuge wetlands. Migrating warblers, American white pelicans, hawks, and hummingbirds arrive, some stay to nest, while others pass through on their journey north. Bluebirds begin scouting for nesting cavities, and the song of dickcissels, meadowlarks, and colorful painted buntings again echo from fields and forests. Visitors enjoy the sights, smells, and sounds of spring including budding green trees, frog calls, and fragrant wildflowers. Fishing in Lake Texoma is usually excellent during this time and many anglers seek spawning crappie.

Summer

It's nesting season and the refuge is abuzz with activity. Great blue herons roost in their treetop nests; fledgling chicks of bluebirds, dickcissels, painted buntings, and killdeer appear; and white-tailed deer fawns lie hidden in the grasslands. By August, shorebirds head south, but winter residents such as blue-winged and green-winged teal begin to arrive. Visitors seek relief from summer heat in shady refuge forests and enjoy boating and fishing on Lake Texoma. Wildlife-watching is at its best in prairie, forest, and open water habitats.

Fall

Autumn's shorter daylight hours trigger migratory behavior in summer-resident birds, who depart for their tropical winter homes. As part of their own southward journeys, migratory shorebirds stop on the refuge to feed in the mudflats and rest. Visitors enjoy the memorable sights of migrating monarch butterflies, raptors, and thousands of white pelicans. Striped bass fishing is excellent on Lake Texoma, and bow hunters prepare for autumn deer season. Vibrant colors and invigorating smells fill the crisp autumn air.

Featured Species

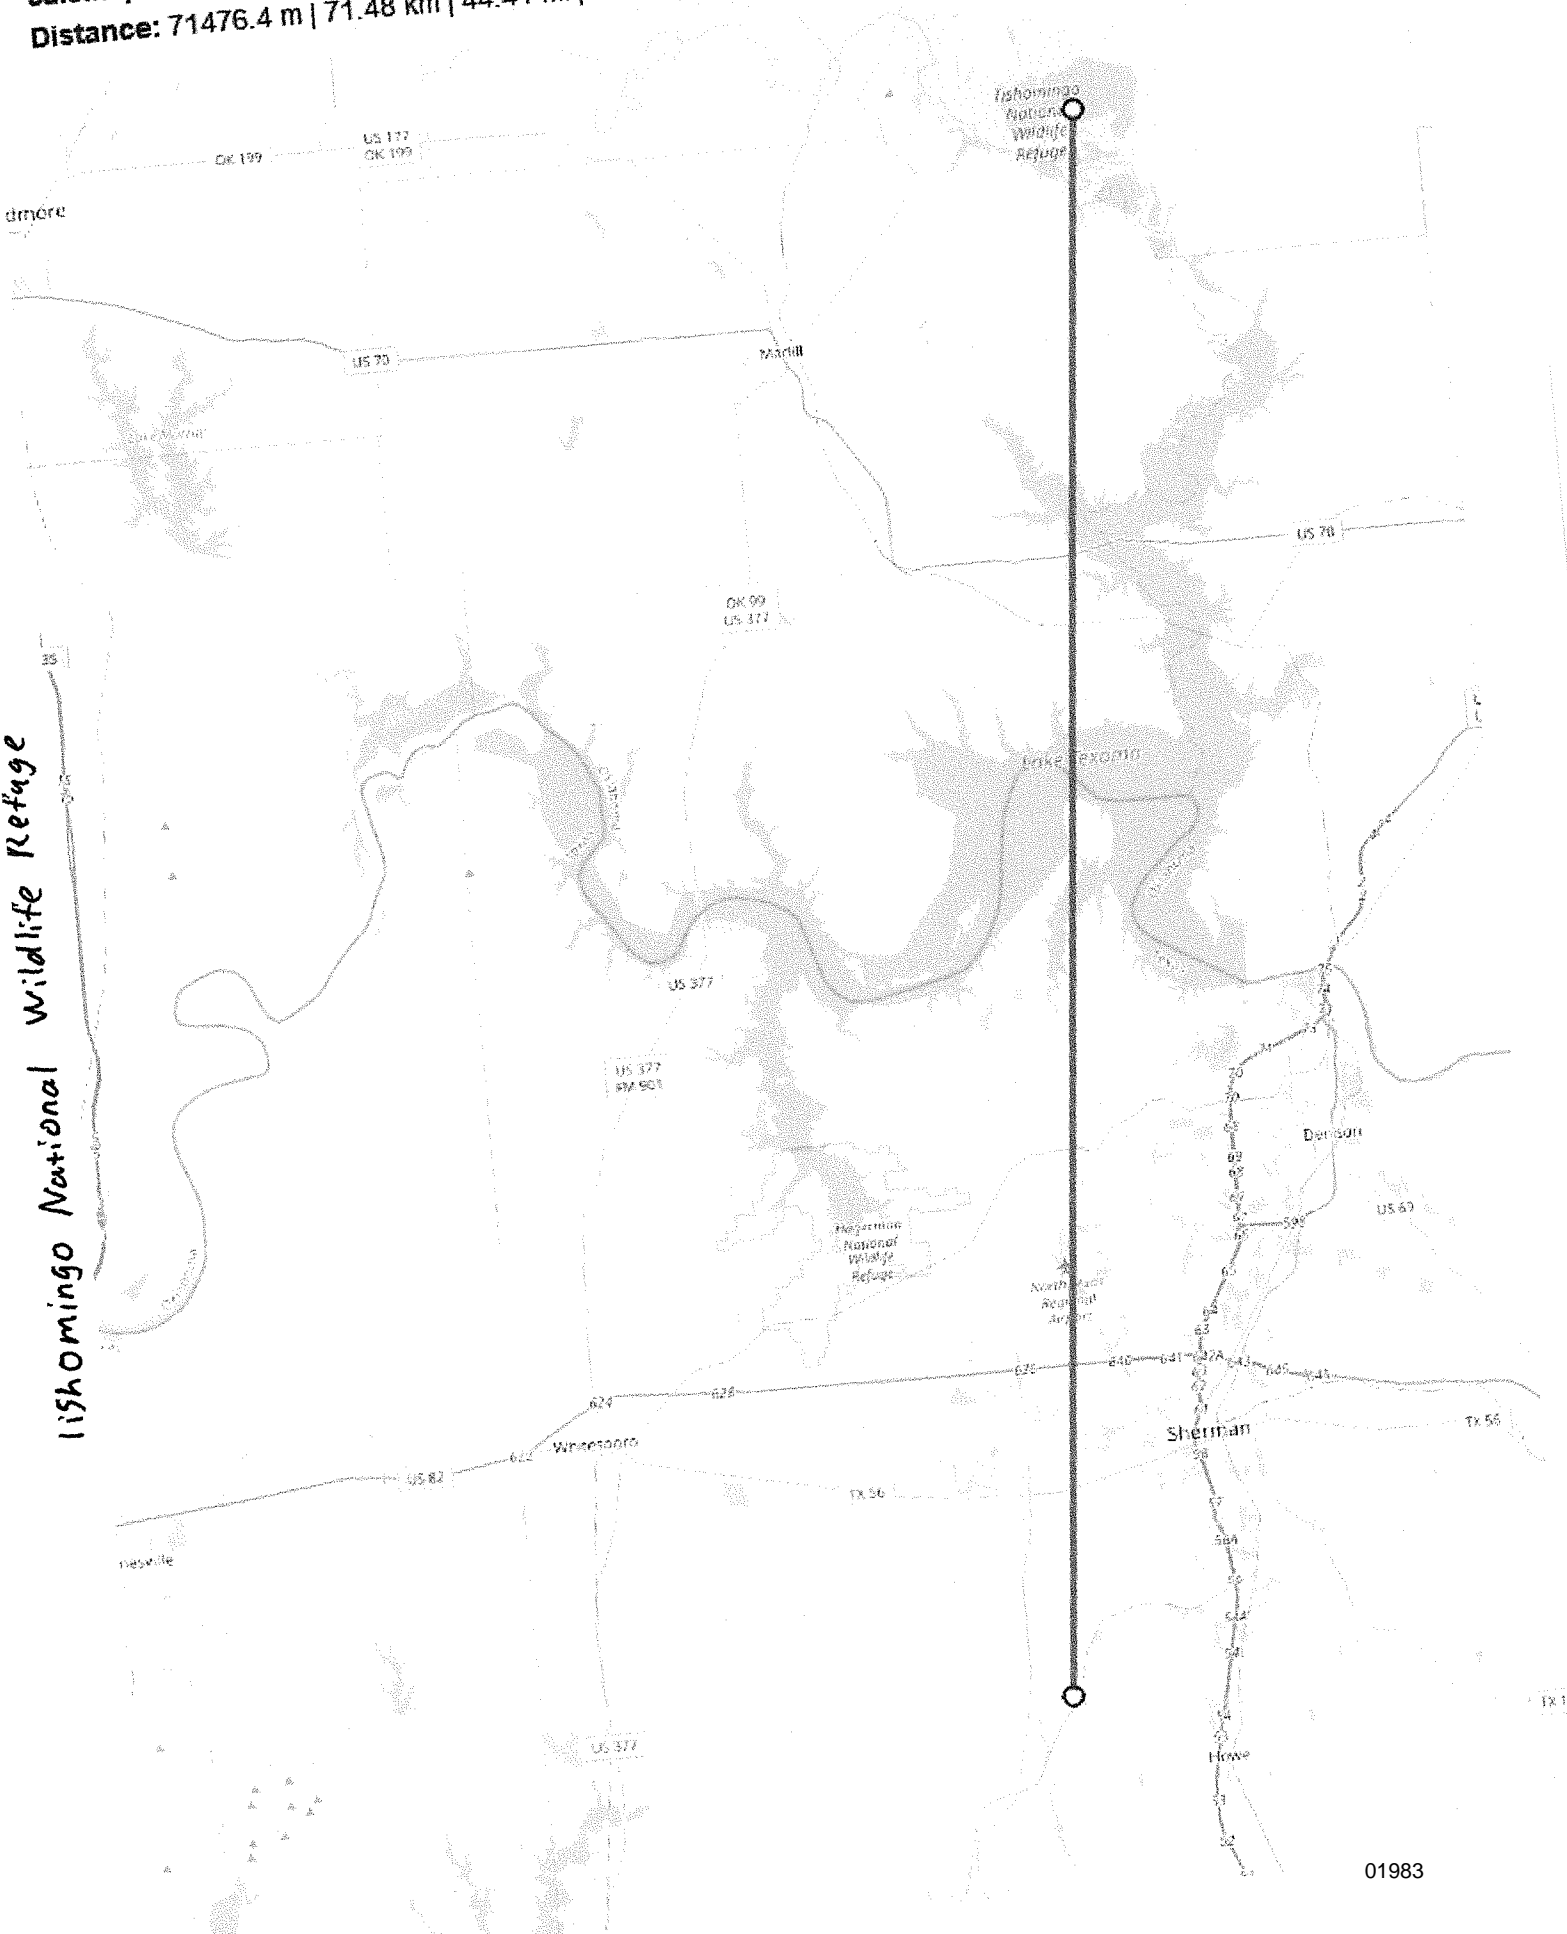

Hagerman National Wildlife Refuge is well known for the diversity of migratory birds that can be found here. In all, 338 species have been spotted here so far. Thousands of waterfowl species use refuge impoundments, waters of Lake Texoma, and managed fields as stop-over and wintering grounds. Some featured species include pintails, mallards, and gadwalls, as well as snow, white-fronted, and Ross' geese. Migratory shorebirds arrive by the thousands to feed in shallow marshes and along the Lake Texoma shoreline during spring and fall. Songbirds, including painted and indigo buntings, great crested and scissor-tailed flycatchers, and summer tanagers, nest here during spring and summer.

Although birds are often at the top of the list for visitors, they are definitely not the only attraction. Native prairie grasses and colorful wildflowers provide seasonal food and shelter for a host of wildlife. Butterflies, dragonflies, dickcissels, and meadowlarks flutter through the summer landscape. Bottomland hardwoods along creeks attract a variety of wildlife including bobcats, raccoons, mink, wild turkey, river otters, turtles, and fox squirrels. Owls and coyotes are often heard at dusk and white-tailed deer can be seen foraging in fields along Wildlife Drive.

TISHOMINGO NATIONAL WILDLIFE REFUGE

Tishomingo National Wildlife Refuge lies at the upper Washita arm of Lake Texoma and is administered for the benefit of migratory waterfowl in the Central Flyway. Most of the refuge's 16,464 acres, including the 4,500-acre Cumberland Pool, were acquired in 1946. The refuge gets its name from a famous Chickasaw Indian Chief and is shared with a nearby century-old town. <P>The refuge offers a variety of aquatic habitats for wildlife. The murky water of Cumberland Pool provides abundant nutrients for innumerable microscopic plants and animals. Seasonally flooded flats and willow shallows lying at the Pool's edge also provide excellent wildlife habitat. Upland areas vary from grasslands to wild plum thickets to oak-hickory-elm woodlands. Crops, primarily wheat and corn, are grown on approximately 900 acres to provide forage and grain for waterfowl. <P>

Map

In addition to the refuge's nutrient-rich waters, the landscape varies from grasslands to wild plum thickets to oak-hickory-elm woodlands and farm fields planted with crops for wildlife. White-tailed deer emerge by the hundreds from the safety of the forests to join the geese in harvesting the crops planted for wildlife. During summer and spring, the same woods shelter colorful songbirds like painted buntings and summer tanagers that are passing through the refuge or have stopped to nest and raise their young. Spring welcomes the beginning of a significant transition period. As monarch butterflies begin arriving from Mexico on their northerly migration, thousands of migratory shorebirds stop over to feed in refuge wetlands. Migrating warblers, pelicans, hawks and hummingbirds arrive, some stay to nest, while others pass through on their journey north.

Each fall, large flocks of geese choose this refuge as their destination for a winter's rest before heading north by early March to nest in the tundra. Snow geese, along with thousands of other waterfowl on the Central Flyway, escape the northern freezing temperatures here. They rest in the safety of the upper Washita arm of Lake Texoma and find nourishing food close by. The ducks tend to disperse to feed in lakes and ponds, while snow and Canada geese nibble grains, wing-to-wing in the croplands.

Featured Species

During the spring and summer months, monarch and other butterfly species can be spotted all throughout the refuge. The monarch's host plant is milkweed and this species can be found along the Prairie Pathways Trail during the summer months. Make sure you take a close look at this plant because there might be some monarch caterpillars feeding on its leaves. Monarchs migrate many miles from the United States and Canada to their annual hibernation spot in central Mexico. Make sure that you grab a butterfly species list at the visitor center before heading out to the trails!

Tishomingo National Wildlife Refuge provides protection for over 290 different species of birds. Some are large and well known such as the bald eagle, Canada goose and American white pelican. Others are small and reclusive like the winter wren, white-eyed vireo and Le Conte's sparrow. In some drought years, rarities found normally in the western U.S. such as the green-tailed towhee, vermilion flycatcher and Say's phoebe have shown up here. That is one of the many great things about birds: they adapt with the environment. When their preferred habitat becomes available in a new location, they take advantage of that space and expand their range.

The bald eagle is a spiritual symbol for native people along with being national emblem. Bald eagles can be identified by their broad wingspan while in flight, and by their white head and tail. This species can be frequently spotted from the eagle cove observation tower. Every year the refuge conducts an annual bald eagle survey and have counted as many as 34 individuals here. This species was once endangered by hunting and pesticides, but now the population has recovered while they have been under protection through the Migratory Bird Act.

Snow geese can be spotted by the thousands here at the refuge. You can start to see these migrants in November, and they stay throughout the winter. These flocks are frequently seen feeding on the refuges planted wheat fields. They can also be spotted on the

Contact: Jacob White

Dates Open: Open year round.

Description

The Caddo National Grasslands WMA is administered by the US Forest Service and is managed under a cooperative agreement with Texas Parks and Wildlife.

The WMA is located in Fannin County and is divided into two units, the 13,360 acre Bois d' Arc Creek Unit and the 2,780 acre Ladonia Unit. The Bois d' Arc Creek Unit comprises six separate land tracts and the Ladonia Unit has twelve land tracts. Parks and Wildlife manages the wildlife hunting opportunities with permitted hunts. The Ladonia Unit tracts, whose boundaries are sometimes hard to find has habitat that attracts mostly doves and quail. Hunting is limited because of the boundary issues. The Bois d' Arc Creek Unit has a more diversified habitat with two lakes and four streams. This Unit is used mainly to hunt white-tailed deer, squirrels and waterfowl. Feral hogs, dove, other migratory game birds, quail, rabbit, hare, predators, furbearers, and frogs are also present. Hunting is by Annual Public Hunting Permit (APH). See the current Public Hunting Lands Map Booklet for legal species, seasons and bag limits. Trapping predators and furbearers are also permitted with a US Forest Service Permit.

Coffee Mill Lake and Lake Davy Crockett offer fishing for perch, crappie, catfish and largemouth bass with Florida largemouth bass in Lake Crockett.

Lyndon B. Johnson National Grassland

Caddo-LBJ National Grasslands

Caddo-LBJ National Grasslands

~ Caddo Maps ([Ladonia Unit](#) & [Bois D' Arc Unit](#)) - [LBJ Map](#) ~

The Caddo and Lyndon B. Johnson (LBJ) National Grasslands are located in two areas northeast and northwest of the Dallas-Fort Worth metroplex. They not only provide grazing land for cattle and habitat for wildlife, but offer a variety of recreation. The most popular activities are hiking, camping, fishing, hunting, horseback riding, mountain biking, wildlife viewing, and photography.

White-tailed deer, small mammals, coyotes, bobcats, red fox, waterfowl, bobwhite quail, turkey, and songbirds thrive in the diverse habitats provided by the Grasslands. Largemouth bass, blue and channel catfish, and various sunfish species are common catches at the many lakes that dot the Grasslands' landscape.

Blue River Public Fishing & Hunting Area

BLUE RIVER PFHA

Blue River is 3,367 acres of Postoak and Blackjack timber and scattered openings. Located 8 miles northeast of Tishomingo.

DRIVING DIRECTIONS

GAME SPECIES OF INTEREST

- Quail: Bobwhite are present in fair numbers.
- Deer: Whitetail are present in fair numbers.
- Turkey: Rio Grande wild turkeys are present in low numbers.
- Rabbit: Cottontail are found across the area.
- Furbearers: Coyote, bobcat and raccoon are available.
- Dove: Dove are present in fair numbers.

NON-GAME SPECIES OF INTEREST

- Bald Eagle: Eagles winter at Tishomingo NWR and can be sighted at Blue River on occasion.

MANAGEMENT PRACTICES

CAMPING/FACILITIES

FISHING OPPORTUNITIES

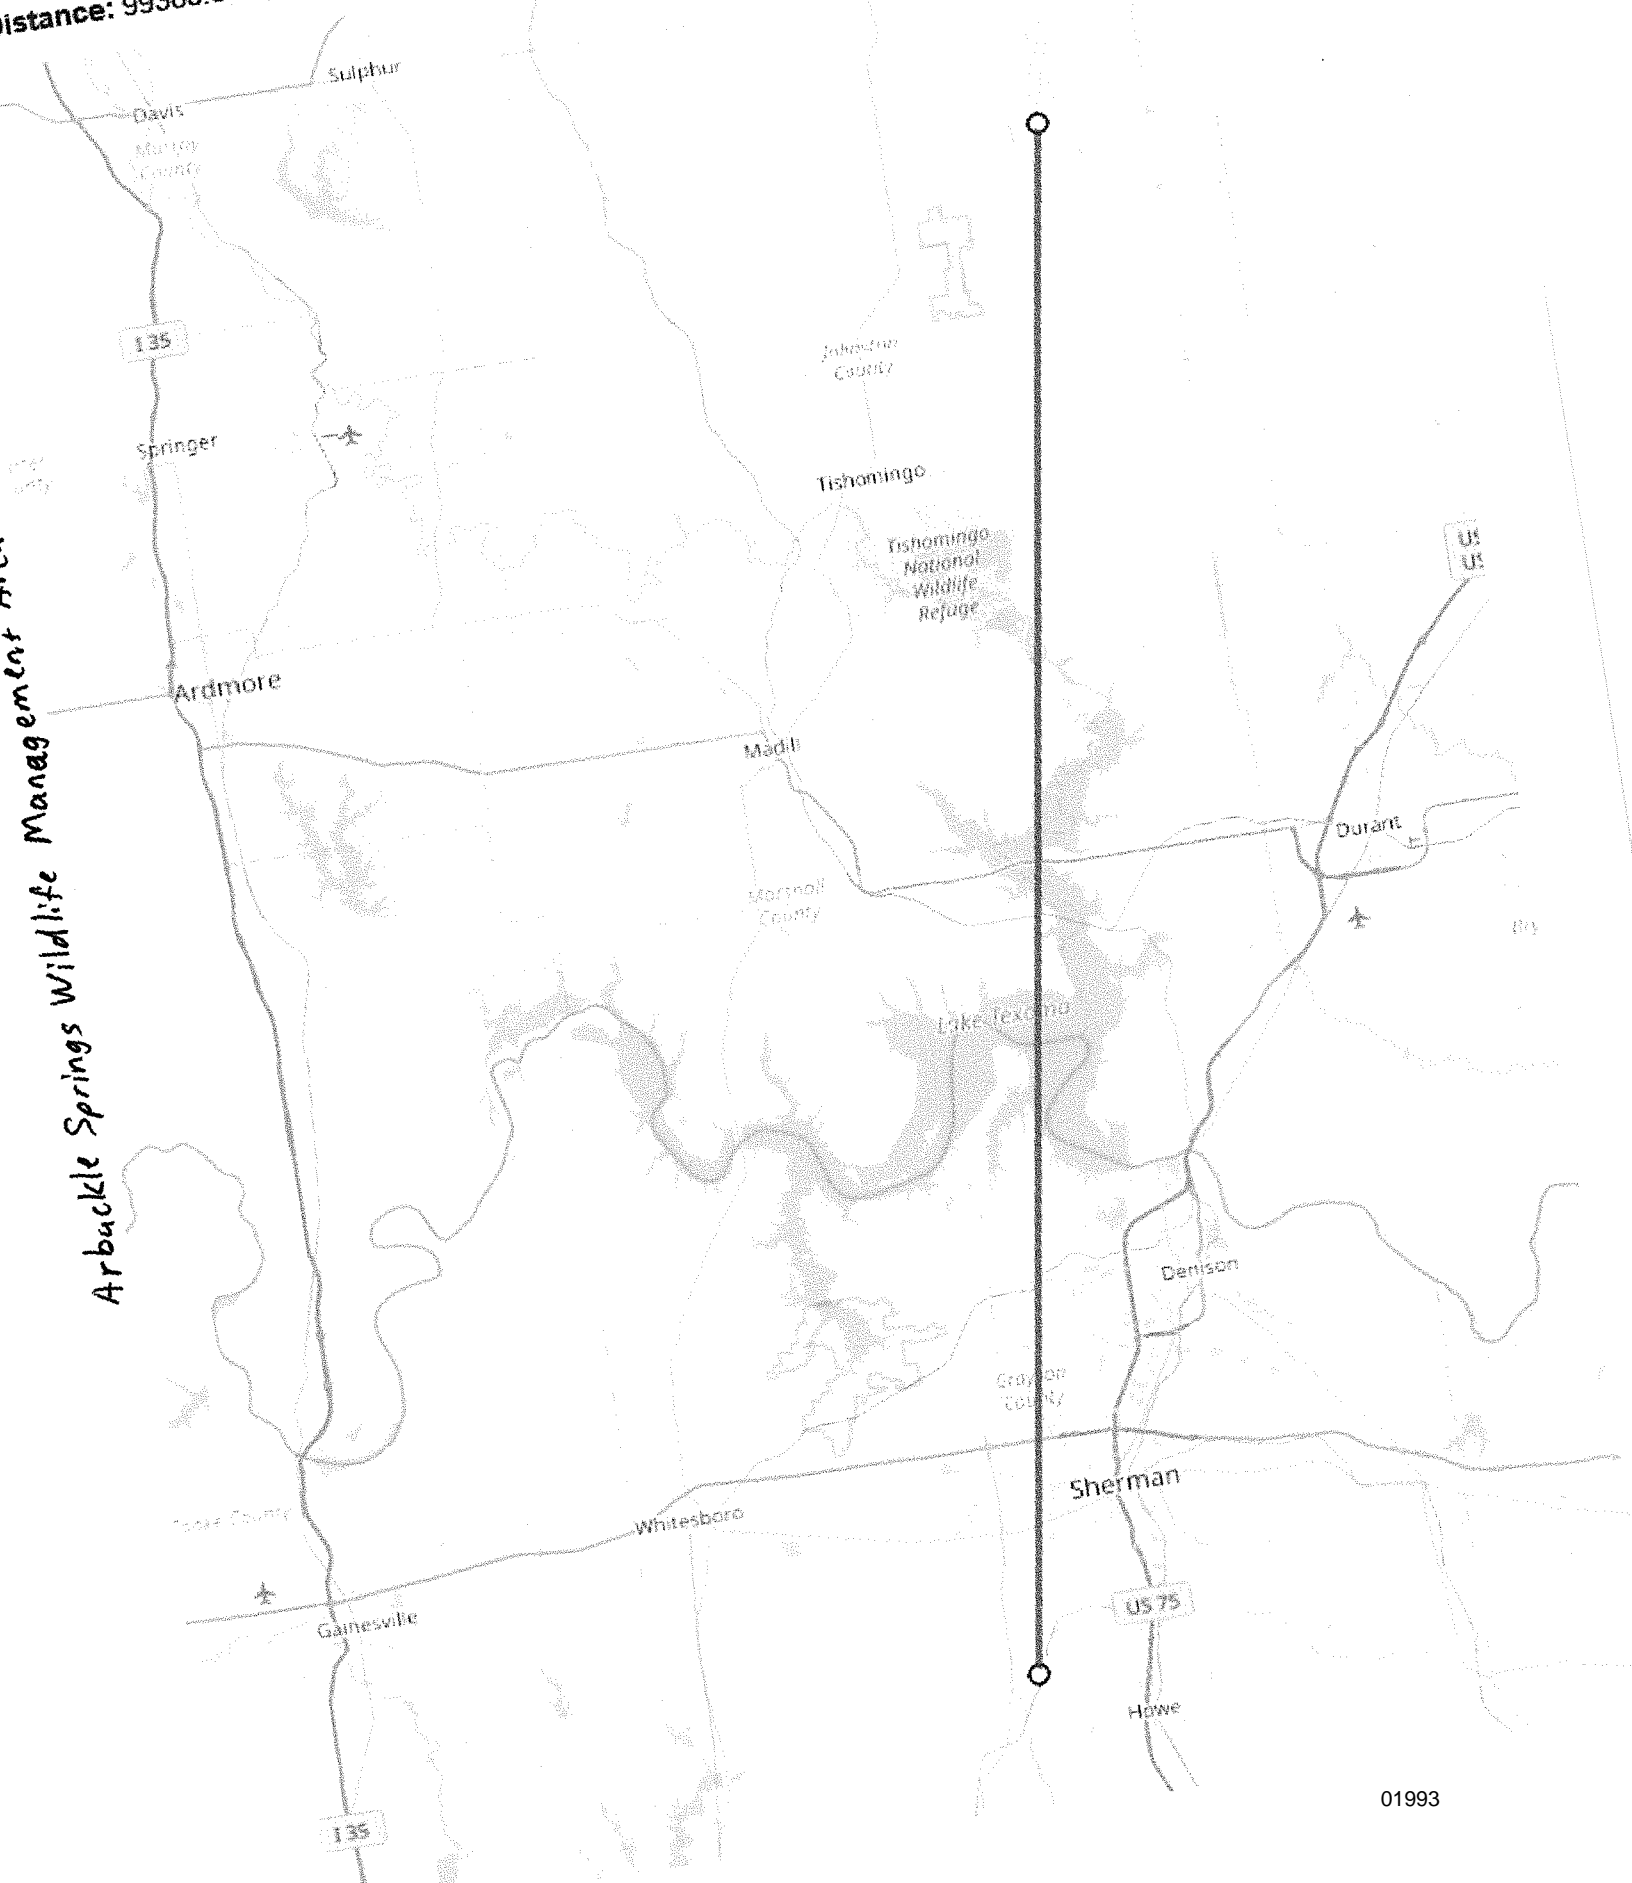

Fishing opportunities abound at Blue River. From November through mid-March, Blue River is a designated trout area, and is stocked with rainbows approximately every two weeks. Summer stockings include channel catfish.

ARBUCKLE SPRINGS WMA

Contacts

3,874.34 acre Arbuckle Springs WMA is located one mile west of the small town of Bromide in far northeast Johnston County. The WMA has very shallow soils overlaying limestone rock. The shallow limestone soils produce plant communities that are uncommon in the state. Native grasses and shrubs are dominant, with smaller patches of oak and other hardwood timber.

KILN CONCERNS

90

RECEIVED

MAR 25 2024

AT PUBLIC MEETING

1 Pollutants

- Nitrogen Oxide / Sulphur Dioxide / Carbon Monoxide

- Contributes to ground level ozone, acid rain, global warming: water quality deterioration

- Effects Our Rural Farming Area

- Ozone prevents photosynthesis for crop growth and grass / hay production
- Affects livestock grown and raised in the area - lung / breathing issues
 - We raise registered Hereford beef cattle that average \$5500 per animal

- Effects on People

- People with lung diseases such as asthma (like myself) or COPD - also damages lung tissue
- This also applies to sulphur dioxide
- Carbon Monoxide is known to reduce ~~the~~ O₂ deliv to organs / contributes to smog (which we currently do not have in Grayson County)

- Some researchers have observed elevated risks of ovarian cancer near such areas - (Springerlink.com (epa.gov))

2 Have you ever heard of the Silicon Prairie?

It refers to this area North of the Dallas Metroplex. Our local leaders have worked tireless hours to land businesses to bring a tech growth boom to Grayson County.

you can already see building progress for TI and Global Water's new billion dollar facilities. This type of business brings in positive job growth and tax revenue to the towns through

- Housing
- Schools
- Supportive businesses (grocery, entertainment etc)
(Sales tax)

- 289/902 growth corridor
- 5,000 homes / ~~and~~ 2 or more schools pretty much across 902 from proposed site

- Serious concerns of property value decline as not many people will want to live ~~and want~~ near pollutant plant.

- Blasting noise pollution will stress out livestock reducing daily rate of gain resulting in lower pounds to sell
- As a female rancher here in Grayson County, my ^{family's} quality of life stands to be ~~and~~ negatively impacted through these items mentioned above. Rural Grayson County raised approx 30,000 head of beef cattle annually according to USDA. The USDA also states we average per year:
 - 1.2 M Bushels of wheat (food supply)
 - 44K Bushels of Soy beans (food supply)
 - 100K 100K Bushels Sorghum (feed for livestock)
 - 905 K Bushels of CornTotalling 2.341 Million bushels of grains per year

3 Water contamination from Air Particulates

- The Dorchester water supply comes from wells produced around the local area

- ground water contamination concerns

- Drinking

- Downstream in Choctaw Watershed which feeds Lake Texoma on Red River

• Lake Texoma water is source for several cities

• Neg. impact on tourism (fishing)

- Nesting grounds for Bald eagles and other migratory birds

☐ I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)

I have severe life-long asthma. I am 72.
Air quality in this area is a vital issue. With
the wind we experience, air quality, hence my
quality of life, will be severely compromised.
Please give this form to the person at the information table. Thank you.
As well the animals in all these areas
will suffer - from vital bees to possums.

RECEIVED

MAR 25 2024

Texas Commission on Environmental Quality
Form PI-1 General Application
Public Notice

Date: October 2023
Permit #: 167047
Company: BM Dorchester LLC

C. Alternate Language Publication

In some cases, public notice in an alternate language is required. If an elementary or middle school nearest to the facility is in a school district required by the Texas Education Code to have a bilingual program, a bilingual notice will be required. If there is no bilingual program required in the school nearest the facility, but children who would normally attend those schools are eligible to attend bilingual programs elsewhere in the school district, the bilingual notice will also be required. If it is determined that alternate language notice is required, you are responsible for ensuring that the publication in the alternate language is complete and accurate in that language.

Is a bilingual program required by the Texas Education Code in the School District?

No

Are the children who attend either the elementary school or the middle school closest to your facility eligible to be enrolled in a bilingual program provided by the district?

No

D. PSD and Nonattainment Permits Only

If this is an application for emissions of GHGs, select either "Separate Public Notice" or "Consolidated Public Notice". Note: Separate public notices requires a separate application.

Consolidated Public Notice

We must notify the applicable county judge and presiding officer when a PSD or Nonattainment permit or modification application is received. This information can be obtained at the link below:

<https://www.txdirectory.com>

Provide the information for the **County Judge** for the location where the facility is or will be located.

The Honorable: Bill Magers
Mailing Address: 100 W. Houston
Address Line 2: Suite 15
City: Sherman
State: Texas
ZIP Code: 75090

Provide the information for the **Presiding Officer(s)** of the municipality for this facility site. This is frequently the Mayor.

First Name: David
Last Name: Smith
Title: Mayor
Mailing Address: 373 Main Street
Address Line 2:
City: Dorchester
State: Texas
ZIP Code: 75459

Are the proposed facilities located within 100 km or less of an affected state or Class I Area?

No

Oklahoma + Tribal Nations

**Texas Commission on Environmental Quality
Public Notice Verification Form
Air Permit**

Applicant Name: BM Dorchester LLC	
Site or Facility Name: Dorchester Facility	
Application Received Date: 11/08/2021	
TCEQ Account Number (if applicable):	Permit Number: 167047, GHGPSDTX212, and PSDTX1602
Regulated Entity Number (RN): RN111368437	Customer Number (CN): CN605952373
All applicants must complete all applicable portions of this form. Send this completed form to the TCEQ to the attention of the Office of the Chief Clerk within 10 business days after the end of the designated comment period . For more information regarding public notice, refer to the instructions in the public notice package.	
Alternative Language Checklist	
I have contacted the appropriate school district. <u>Not right School to Ask</u> <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
School District: <u>Gunter ISD</u> <u>Howe ISD</u>	Phone Number:
Person Contacted: Consulted District Website	Date: November 2021
Is a bilingual education program (BEP) required by the Texas Education Code in the district?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
If answer is "NO," skip to first question in verification box on next page. (Note: A BEP is different from "English as a Second Language" (ESL) program; and Elementary/Middle schools that only offer ESL will not trigger notice in an alternative language.)	
Notice in an alternative language is required if a BEP is required in the District, and one of the following conditions is met:	
1. students in the elementary or middle school nearest the facility are enrolled in a program at that school;	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
2. students from the elementary or middle school nearest the facility attend a BEP at another location; or	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
3. the school district that otherwise would be required to provide a BEP has been granted an exception from the requirements to provide the program, as provided for in 19 Texas Administrative Code 89.1207(a).	<input type="checkbox"/> Yes <input type="checkbox"/> No
If the answer is "NO" to 1, 2, and 3 above, then alternative language notice is not required .	
The name of the elementary school nearest to the proposed or existing facility is:	
The name of the middle school nearest to the proposed or existing facility is:	
The following language(s) is/are utilized in the bilingual program:	
If notice in an alternative language is required, then applicants must publish alternative language notice(s) and post alternative language sign(s), as outlined in the <i>Instructions for Public Notice</i> and certify compliance with those requirements on this form.	

**Texas Commission on Environmental Quality
Public Notice Verification Form
Air Permit**

Applicant Name: BM Dorchester LLC	
Site or Facility Name: Dorchester Facility	
Application Received Date: 11/08/2021	
TCEQ Account Number (if applicable):	Permit Number: 167047, GHGPSDTX212, and PSDTX1602
Regulated Entity Number (RN): RN111368437	Customer Number (CN): CN605952373
For more information regarding public notice, refer to the instructions in the public notice package.	
Alternative Language Verification	
1. A BEP is required by the Texas Education Code in the area addressed by this permit application and is subject to alternative language public notice requirements. If "NO," skip 2 through 6 and complete signature, title, date, and name of applicant.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
2. The applicant has conducted a diligent search for a newspaper or publication of general circulation in both the municipality and county in which the facility is located (or proposed to be located).	<input type="checkbox"/> Yes <input type="checkbox"/> No
3. A newspaper or publication could not be found in any of the alternative language(s) in which notice is required.	<input type="checkbox"/> Yes <input type="checkbox"/> No
4. The publishers of the newspaper listed below refused to publish the notice as requested, and another newspaper or publication in the same language and of general circulation could not be found in the municipality or county in which the facility is located (or proposed to be located).	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Newspaper:	Language:
5. Proof of publication of the newspaper alternative language notice(s) and the requested affidavits have been sent to the TCEQ.	<input type="checkbox"/> Yes <input type="checkbox"/> No
6. Alternative language signs were posted as required by the TCEQ.	<input type="checkbox"/> Yes <input type="checkbox"/> No
This form must be signed and dated by a designated representative acting on behalf of the applicant after the end of the designated comment period. TCEQ - Page 5
April 11, 2022

Response:

A different percent ammonia stream is specified for the components in gas service versus liquid service. When the percent ammonia is applied, the totals are equivalent to the total ammonia fugitive emissions of 0.06 lb/hr and 0.28 tpy represented in the application.

General Application Issues

Item 9:

Question:

The application refers to the location as being on Highway 902. However, the road is Farm to Market (FM) 902. Please correct all references to this in the application materials.

Response:

All references to Highway 902 in the application materials have been updated to reflect the name as Farm to Market (FM) 902. Replacement pages are provided in Attachment 4 of this letter.

Item 10:

Question:

The area map currently omits several residences and structures from the 3,000-foot radius. Please update the map to include these residences or other structures which would qualify as receptors. Additionally, the church should be labeled as both a church and a school.

Response:

A revised area map is provided in Attachment 5 of this letter.

Modeling

Item 11:

Question:

Please provide a revised protocol as described by Ms. Rachel Melton in her December 8 email, and any changes as suggested by Erik Snyder (EPA) on December 21 and 22.

Response:

A revised protocol is being provided in accordance with the teleconference held on January 21, 2022.²

² Conference call between TCEQ, Trinity Consultants, and BM Dorchester on January 21, 2022.

Subject: RE: Draft Permit #2 for BM Dorchester - Proposed Permit # 167047

Joel,

Please find attached comments on the draft permit conditions (attached) as well as further discussion below. No further comments are provided on the MAERT. Once you've had a chance to look over the comments, we'd like to schedule a call to go over anything that needs additional clarification or discussion. We would like to schedule this call for Friday, 1/12, depending on your schedule.

1. Special Condition 8. Opacity for cement kiln. Based on review of the referenced permits, Black Mountain disagrees with the 5% opacity requirement applying to the proposed natural gas fired rotary cement kiln and believes that the opacity limit for the kiln should be 10 percent.
 - a. Permit No. 154671 for the Texas Lehigh Buda cement production site identifies the opacity limits as follows in Special Conditions 9 and 10:
 - All sources listed on the MAERT, except the dust collector stacks, shall be limited to 10 percent opacity.
 - Opacity of particulate matter emissions from all dust collectors' stacks shall not exceed 5 percent, average over a six-minute period.
 - Therefore, the opacity limit for the Texas Lehigh Buda cement kiln is 10 percent.
 - b. Permit No. 48196 authorizes a rotary dryer and not a kiln, which is not an equivalent comparison to the proposed natural gas fired rotary cement kiln.
 - c. Permit No. 7808 authorizes a new natural gas-fired vertical lime kiln (Kiln No. 4), which is not an equivalent comparison to the proposed natural gas fired a rotary cement kiln. The other rotary lime kilns listed in
Permit No. 7808 have a 10% opacity limit.
 - d. Lastly, the kiln baghouse suppliers will only guarantee a 10% opacity.

Response:

Please see the attached Texas Lehigh Permit #3611D as an example of the latest cement kiln permit issued by TCEQ which met 5% opacity. We believe that this represents BACT for cement kilns as well as for any filter controlled source in general. We believe that the supplier needs to find a way to meet 5%.

How did they do this

2. Special Condition 11. Table 1. Dioxins/Furans (D/F) need to be included in Table 1 because D/F were listed in Table 7-3 under the Federal Rule Applicability Section of the NSR permit application.

Response:

Noted.

Texas Commission on Environmental Quality
Form PI-1 General Application
General

Date: October 2023
 Permit #: 167047
 Company: BM Dorchester LLC

If required to obtain a SOP or GOP , list all associated permit number(s). If no associated permit number has been assigned yet, enter "TBD":	TBD

IV. Facility Location and General Information

A. Location

County: Enter the county where the facility is physically located.	Grayson
TCEQ Region	Region 4
County attainment status as of Sept. 23, 2019	attainment or unclassified for all pollutants
Street Address:	
City: If the address is not located in a city, then enter the city or town closest to the facility, even if it is not in the same county as the facility.	Dorchester
ZIP Code: Include the ZIP Code of the physical facility site, not the ZIP Code of the applicant's mailing address.	75459
Site Location Description: If there is no street address, provide written driving directions to the site. Identify the location by distance and direction from well-known landmarks such as major highway intersections.	From the intersection of highway 289 and Farm to Market (FM) 902 east of Dorchester, Texas, head east on FM 902 for approximately 0.80 miles. The Dorchester Plant site will be located directly north of FM 902 after the intersection of Taylor Rd.
Use USGS maps, county maps prepared by the Texas Department of Transportation, or an online software application such as Google Earth to find the latitude and longitude.	
Latitude (in degrees, minutes, and nearest second (DDD:MM:SS)) for the street address or the destination point of the driving directions. Latitude is the angular distance of a location north of the equator and will always be between 25 and 37 degrees north (N) in Texas.	33:32:17.43
Longitude (in degrees, minutes, and nearest second (DDD:MM:SS)) for the street address or the destination point of the driving directions. Longitude is the angular distance of a location west of the prime meridian and will always be between 93 and 107 degrees west (W) in Texas.	96:41:22.67
Is this a project for a lead smelter, concrete crushing facility, and/or a hazardous waste management facility?	No

B. General Information

Site Name:	Dorchester Plant
Area Name: Must indicate the general type of operation, process, equipment or facility. Include numerical designations, if appropriate. Examples are Sulfuric Acid Plant and No. 5 Steam Boiler. Vague names such as Chemical Plant are not acceptable.	Preheater / Precalciner kiln line and associated equipment
Are there any schools located within 3,000 feet of the site boundary?	No <i>First class North Texas</i>

C. Portable Facility

Permanent or portable facility?	Permanent
---------------------------------	-----------

D. Industry Type

Principal Company Product/Business:	Portland Cement Production
-------------------------------------	----------------------------

State Representative:	Reggie Smith
District:	62

V. Project Information	
A. Description	
Provide a brief description of the project that is requested (describe the what, not the how and why). Limited to 500 characters.	Black Mountain Dorchester LLC is proposing to construct a greenfield portland cement production plant that will be located in Dorchester, Texas.
B. Project Timing	
Authorization must be obtained for many projects before beginning construction. Construction is broadly interpreted as anything other than site clearance or site preparation. Enter the date as "Month Date, Year" (e.g. July 4, 1776).	
Projected Start of Construction:	August 1, 2022
Projected Start of Operation:	August 1, 2023
C. Enforcement Projects	
Is this application in response to, or related to, an agency investigation, notice of violation, or enforcement action?	No
D. Operating Schedule	
Will sources in this project be authorized to operate 8760 hours per year?	Yes

VI. Application Materials	
All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. (30 TAC § 116.116)	
A. Confidential Application Materials	
Is confidential information submitted with this application?	No
B. Is the Core Data Form (Form 10400) attached (link to the form below)?	
https://www.tceq.texas.gov/assets/public/permitting/centralregistry/10400.docx	
C. Is a current area map attached?	Yes

Not Accurate

Texas Commission on Environmental Quality
Form PI-1 General Application
General

Date: October 2023
 Permit #: 167047
 Company: BM Dorchester LLC

Is the area map a current map with a true north arrow, an accurate graduated scale, the entire plant property, the location of the property relative to prominent geographical features including, but not limited to, highways, roads, streams, and significant landmarks such as buildings, residences, schools, parks, hospitals, day care centers, and churches?	Yes	<i>Not Accurate</i>
Does the map show a 3,000-foot radius from the property boundary?	Yes	
D. Is a plot plan attached?	Yes	
Does your plot plan clearly show a north arrow, an accurate scale, all property lines, all emission points, buildings, tanks, process vessels, other process equipment, and two bench mark locations?	Yes	<i>← No PSD</i>
Does your plot plan identify all emission points on the affected property, including all emission points authorized by other air authorizations, construction permits, PBRs, special permits, and standard permits?	Yes	<i>All emissions</i>
Did you include a table of emission points indicating the authorization type and authorization identifier, such as a permit number, registration number, or rule citation under which each emission point is currently authorized?	Yes	<i>Not Accurate</i>
E. Is a process flow diagram attached?	Yes	
Is the process flow diagram sufficiently descriptive so the permit reviewer can determine the raw materials to be used in the process; all major processing steps and major equipment items; individual emission points associated with each process step; the location and identification of all emission abatement devices; and the location and identification of all waste streams (including wastewater streams that may have associated air emissions)?	Yes	
F. Is a process description attached?	Yes	
Does the process description emphasize where the emissions are generated, why the emissions must be generated, what air pollution controls are used (including process design features that minimize emissions), and where the emissions enter the atmosphere?	Yes	
Does the process description also explain how the facility or facilities will be operating when the maximum possible emissions are produced?	Yes	
G. Is a detailed list of requested actions included in the application? This list can be included in the project description.	Yes	
H. Are detailed calculations attached? Calculations must be provided for each source with new or changing emission rates. For example, a new source, changing emission factors, decreasing emissions, consolidated sources, etc. Calculations do not need to be submitted for sources without any proposed emission rate changes. Note: the preferred format is an electronic workbook (such as Excel) with all formulas viewable for review.	Yes	<i>Not Accurate Run Time & all emissions Source</i>
Are emission rates and associated calculations for planned MSS facilities and related activities attached?	Yes	
I. Is a material balance (Table 2, Form 10155) attached?	Yes	
Table 2 (Form 10155), entitled Material Balance: A material balance representation may be required for all applications to confirm technical emissions information. Typically this is required for refining and chemical manufacturing processes involving reactions, separations, and blending. It may also be requested by the permit reviewer for other applications. Table 2 should represent the total material balance; that is, all streams into the system and all streams out. Additional sheets may be attached if necessary. Complex material balances may be presented on spreadsheets or indicated using process flow diagrams. All materials in the process should be addressed whether or not they directly result in the emission of an air contaminant. All production rates must be based on maximum operating conditions.		
J. Is a list of MSS activities attached?	Yes	
Are the MSS activities listed and discussed separately, each complete with the authorization mechanism or emission rates, frequency, duration, and supporting information if authorized by this permit?	Yes	
K. Is a discussion of state regulatory requirements attached, addressing 30 TAC Chapters 101, 111, 112, 113, 115, and 117?	Yes	
For all applicable chapters, does the discussion include how the facility will comply with the requirements of the chapter?	Yes	
For all not applicable chapters, does the discussion include why the chapter is not applicable?	Yes	
L. Are all other required tables, calculations, and descriptions attached?	Yes	

3. AREA MAP

The Dorchester Cement Plant is located in Grayson County, Texas. Figure 3-1 shows the location of the Dorchester Cement Plant and the surrounding land use within 3,000 feet. The area map below shows the fenceline, UTM coordinates on the horizontal and vertical axis, urban areas within the AOI, and location of the nearest non-industrial receptors. The fenceline is just inside the property line and is used as the ambient air boundary.

Re: Permit Application
Permit Numbers: 167047, GHGPSDTX212, and PSDTX1602
Portland Cement Plant
Dorchester, Grayson County
Regulated Entity Number: RN111368437
Customer Reference Number: CN605952373

Dear Mr. Bender:

Upon evaluation of the above-referenced application, we have determined that your application is deficient and BM Dorchester LLC must provide additional information to ensure that the requirements for obtaining a permit are met. Please furnish the following information within 30 days:

Best Available Control Technology

1. The proposed condensable and total PM limits are greater than the recently issued Permit 154671. In that permit *total* PM limits are required to meet 0.19 lbs. of PM per ton of clinker. *Condensables* are required to meet 0.16 lbs. per ton of clinker. This permit application proposes a limit of 0.30 lbs./ton of clinker for *total* PM and 0.28 lbs./ton of clinker for *condensable* PM. While this is less than some older plants (Rio Grande, Holcim) it is greater than the most recently issued greenfield cement kiln (Texas Lehigh – Permit 154671). Accordingly, please justify the higher total and condensable rate and/or explain why this proposed facility cannot meet the rates permitted in Permit 154671.
2. Please provide the proposed outlet grain loading of the Kiln Baghouse (EPN 21-SK-230).
3. This permit application proposes 0.01 gr/dscf PM/PM10 outlet grain loading for all of the sources other than the kiln. PM2.5 outlet grain loading is proposed as 0.005 gr/dscf. Typically the TCEQ does not accept different outlet grain loadings for different PM fractions unless specific justification is given (such as manufacturer ratings). BACT is based on the latest permits issued in particular industry categories rather than the generic rate or level of control found in TCEQ guidance.
Recent permits for similar (lime production is considered as very similar to Portland cement production in terms of the nature of the material handled and filtration characteristics) or identical industries specified baghouses at less than 0.01 gr/dscf for PM, PM10, and PM2.5. Specifically:

Re: Permit Numbers: 167047, GHGPSDTX212, and PSDTX1602

Permit	Source categories	Outlet grain loading
7808 (lime kiln)	Feeders, handlers, silos, conveyors, surge bins, loading	0.005 gr/dscf
9009 (lime kiln)	Feeders, handlers, silos, conveyors, surge bins, loading	0.005 gr/dscf
48196 (lime kiln)	Milling, drying, and loadout	0.005 gr/dscf
154671 (Portland cement kiln)	Kiln	0.002 gr/dscf (PM) 0.0017 gr/dscf (PM10) 0.001 gr/dscf (PM2.5)
	Handling, silos, feeders, dust bins, dust load out, air slides, load out	0.0044 gr/dscf
	Finish mill, clinker cooler	0.0022 gr/dscf

- Please clarify the nature and general design of the partial enclosures proposed for raw material handling sources which are claiming an 85% control efficiency.

Kiln Fuels

- Please clarify as to whether natural gas is the only proposed and planned fuel source for the kiln.

Portland Cement Toxicology Review

- Portland cement has an associated Effects Screening Level (ESL). Please include a demonstration that emissions from all sources associated with the handling and production of Portland cement are included in an ESL based analysis relating to predicted emission concentrations associated with this material.

Tables and Baghouses

- The Table 11 for the numerous sources specifies the outlet grain loading as 0.1 grain/scf. Please correct this and provide corrected tables.

Fugitive Emissions (ammonia)

- The submitted application materials, Fugitive Piping Components (Ammonia) calculations page 86/155 of the .pdf identifies total fugitive emissions as 0.06 lb/hr and 0.28 tpy.

Re: Permit Numbers: 167047, GHGPSDTX212, and PSDTX1602

Equipment Component	Component Count ^a	SOCMI Without C2 ^b (lb/hr)/Component	Control Efficiency ^c	Emissions Without C2 ^{d*}	
				(lb/hr)	(tons/yr)
Valves - Light Liquid	10	0.0035	97%	0.0002	0.001
Valves - Gas/Vapor	68	0.0089	97%	0.0182	0.080
Pumps - Light Liquid	6	0.0386	93%	0.0031	0.013
Flanges/Connectors - Light Liquid	88	0.0005	97%	0.0003	0.001
Flanges/Connectors - Gas/Vapor	170	0.0029	97%	0.0148	0.065
Safety Relief Valve - Gas/Vapor	4	0.2293	97%	0.0275	0.121
Open-Ended Lines	0	0.004	100%	0.0000	0.000
Total				0.06	0.28

However, this is not consistent with the submitted TCEQ Fugitive Workbook when totaling the fugitive emissions between both tabs (Common Fug and Common FUG-add1):

Common Fug = 0.06 lb/hr and 0.26 tpy

Common Fug-add1 = 0.02 lb/hr and 0.08 tpy

Total for both tabs = 0.08 lb/hr and 0.34 tpy

Additionally, as ammonia fugitives are proposed to be emitted from one EPN (NH3FUG), all component representations should be represented on the same Common Fug tab. Please update the TCEQ Fugitive workbook to include all represented component counts shown above and not that this will correctly reflect the total of 0.08 lb/hr and 0.34 tpy NH3.

- a. Please also be sure to update the PI-1 workbook accordingly (as the current proposed emission rates for EPN NH3FUG incorrectly represents 0.06 lb/hr and 0.28 tpy NH3) and ensure the final modeling is consistent with the correct fugitive emission rates of 0.08 lb/hr and 0.34 tpy.

The submitted calculations indicate in footnote a that component counts are estimated based on similar facilities. As this is a proposed new facility an estimation is acceptable at this time, however please be aware that a future as-built amendment will be required to reflect true component count. Please verify that the estimated component counts represented for this project are as accurate and conservative as possible to ensure the final impact analysis represents a conservative fugitive emission rate.

Note that the special conditions for the 28AVO Leak Detection and Repair program will require a physical walk-through inspection every four hours with repair or containment of leak within one hour of detection and identification. Also note that the inspection frequency given in the 28AVO condition may be reduced on a case-by-case basis if proper justification is provided, but it may not be reduced to less than once per shift. Please verify whether physical walk-through inspections will be conducted every four hours as required by the program.

General Application Issues

9. The application refers to the location as being on Highway 902. However, the road is Farm to Market (FM) 902. Please correct all references to this in the application materials.
10. The area map currently omits several residences and structures from the 3,000 foot radius. Please update the map to include these residences or other structures which would qualify as receptors. Additionally, the church should be labeled as both a church and a school.

Mr. Jacob Bender

Re: Permit Numbers: 167047, GHGPSDTX212, and PSDTX1602

Modeling

11. Please provide a revised protocol as described by Ms. Rachel Melton in her December 8 email, and any changes as suggested by Erik Snyder (EPA) on December 21 and 22.

After receipt of all the additional information, we will continue the review of your application. If the information furnished in response to this notice results in the need for further clarification or additional information, we will notify you. Please note that the applicant Bm Dorchester LLC is required to furnish all information to demonstrate that the facility or source will comply with all applicable federal and state rules and statutes.

Failure to submit all of the requested information within 30 days of the date of this notification may result in a voidance of your application. Following a voidance, the permit fee will be retained for 180 days. If you still wish to pursue the project following the voidance, you will need to submit an entirely new application. The new application will be subject to the state and federal rules and regulations in place at the time of submittal. If public notice was required in the original application, you may be required to republish the notice. You do not need to submit additional fees with the new application if the project scope has not increased and the original fee was correct.

In addition, please ensure that a copy of the submitted information is also sent to the applicable Texas Commission on Environmental Quality (TCEQ) regional office and any local air pollution control program(s) with jurisdiction. Please note that the cover letter for your submission should indicate that a copy has been sent to the regional office [and local air pollution control program(s), if applicable]. Lists of the TCEQ regional offices and local air pollution control programs are available at:

<https://www.tceq.texas.gov/agency/directory/region/reglist.html>
and
www.tceq.texas.gov/permitting/air/local_programs.html, respectively.

If a new application is not submitted within 180 days from the date of the voidance, you will forfeit the original permit fee.

Thank you for your cooperation in this matter. If you have any questions, please contact me at (512) 239-0270, or write to the TCEQ, Office of Air, Air Permits Division, MC-163, P.O. Box 13087, Austin, Texas 78711-3087.

Sincerely,

Joel Stanford

Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

*

I've converted the provided information into a table

16. The following material handling operations shall utilize the specified controls:

Table 3: Material Handling Operation Controls

EPN	Source Name	Controls
TRK_MH	Additive - Material Handling Truck Unloading	Three-sided walls and fogging nozzles.
RR_MH	Additive - Material Handling Rail Unloading	Two-sided walls and fogging nozzles.
LSCRSBBD_MH	Limestone – Material Handling LS Crusher Building	Three-sided walls and fogging nozzles.

Special Conditions
Permit Numbers 167047, PSDTX1602, and GHGPSDTX212
Page 6

Dustless telescopic spouts shall be used for loading trucks or rail from bins or silos.

17
While doing this I also noticed that the NH3 fugitive language for 28 AVO was incorrect. These programs are based on rigid requirements to get the associated credit. The language which I pulled from a different permit rather than the library (apparently) had 24 hours rather than every 4 hours. The time to fix issues was also incorrectly set at 24 hours. Ammonia handling systems for SCRs can actually be set at "once per shift" based on historical permitting practices, despite our guidance saying 4 hours for the use of 28AVO credits. The 4 hours is really for *everything else*. The once per shift combined with 1 hour to address issues represents BACT for ammonia components in SCR service and allows for the full credits as used in the application.

★
I've corrected this in the attached.

Ammonia Handling

Piping, Valves, Pumps, and Compressors in contact with ammonia - 28AVO

27. Except as may be provided for in the Special Conditions of this permit, the following requirements apply to the above-referenced equipment:
- A. Audio, olfactory, and visual checks for leaks within the operating area shall be made once per shift.
 - B. Immediately, but no later than 1 hour upon detection of a leak, plant personnel shall take at least one of the following actions:

One final issue! The new PM2.5 standard was published (more information is available here and here). You'll want to look at how this will be met for this project, as the effective date looks to be 60 days from following publication today. I was ready to issue 2nd notice by tomorrow, but this complicates issues. The clearest path I can see is this:

- ★
- Publish based on the permit now, announcing the meeting and with the current standard reflected in the permit documents. There is a 60-day window before actual implementation, so we could be working towards updating the modeling and controls if necessary (baghouse efficiencies could be an easy path to this?) to get below the new PM2.5 standard (9 $\mu\text{g}/\text{m}^3$ annual arithmetic mean, averaged over three years). Once completed this could require re-publication if the draft permit was updated as a result. If it was just an update to the audit? Unlikely based on previous legal guidance as substantial changes to the permit itself is what counts on re-triggering notice, rather than something like an additional line on a modeling audit.

We can definitely have a call about all this, though of course I'm waiting some broader policy implementation from management to have details clarified – which should be soon.

Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

More from Penta. I don't know if it's necessary to go activity by activity in the condition, but wanted to provide verbatim what the design engineers are telling us.

Mike,

Yes, it should be the same. Please see below:

- Limestone crusher building: three side walls and fogging nozzles.
- Additive unloading by truck: three side walls and fogging nozzles.
- Additive unloading by rail: two side walls and fogging nozzles.
- Bypass dust bin: dustless telescopic spouts.
- SO2 scrubbing waste silo: dustless telescopic spouts.
- Cement silos loadout: dustless telescopic spouts.

Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

Ok, thank you. The changes to CND 15 are accepted.

On CND 16 – I just based that on drawings included with the deficiency response. Are the controls exactly the same for the LS Crusher building dump as for the truck and rail loading?

From: Mike Meister <MMeister@trinityconsultants.com>
Sent: Tuesday, February 6, 2024 3:22 PM
To: Joel Stanford <joel.stanford@tceq.texas.gov>
Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

I received this from Penta:

Condition 15 – Limestone Stockpiles 1 and 2, the Gypsum Stockpile, the High-Grade Limestone Stockpile, and the Sand Stockpile, and in general, all incoming raw materials shall be stored in an fully enclosed buildings.

Condition 16 – We trust that our current approach of dust suppression with the walls with fogging nozzles or peripheral dusty air suction nozzles is sufficient to comply with the regulations. We believe curtains are unnecessary and won't last very long; additionally, they could be a potential hazard because we will be using quarry-size dump trucks.

126-19
From: Joel Stanford <joel.stanford@tceq.texas.gov>
Sent: Monday, February 5, 2024 3:21 PM
To: Mike Meister <MMeister@trinityconsultants.com>
Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

Hopefully the last finds.

- The stockpiles CND only referenced the limestone stockpiles. However, all stockpiles were represented as being in buildings in the initial application.
- The material handling CND relating to enclosure had omitted the crusher building operations. I added these in with the description from the original deficiency response.

Material Handling and Housekeeping

15. Limestone Stockpiles 1 and 2, the Gypsum Stockpile, the High Grade Limestone Stockpile, and the Sand Stockpile shall be stored in an enclosed storage building.
16. Raw material truck and rail loading operations (EPNs RR_MH and TRK_MH) shall utilize partial enclosure defined as consisting of two or three-sided walls with fogging nozzles or peripheral dusty air suction nozzles on the perimeter of the hoppers for unloading by rail or truck. Dustless telescopic spouts shall be used for loading trucks or rail from bins or silos. The Limestone - Material Handling LS Crusher Building (EPN LSCRSHBD_MH) shall utilize a dust enclosure with rubber curtains above the hopper.
17. Raw material conveyers shall be fully enclosed.
18. Plant roads shall be paved and cleaned, as necessary, to control the emission of dust to the minimum level possible under existing conditions. Haul roads shall be sprinkled with water and/or chemicals, as necessary, to maintain compliance with all applicable TCEQ rules and regulations.

All good?

Thanks,

Joel Stanford

Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

I'm sorry to keep finding these little issues! In the April 11, 2022 def letter response (Page 2), 0.002 gr/dscf was given as the efficiency of the kiln baghouse. However, when I drafted these it appears that I accidentally left the kiln at 0.005 like the rest of the bagfilters. I've corrected this in Table 2. ★

2024

Bagfilters, Scrubber, and Dry Sorbent Injection System

13. Fabric filter dust collectors shall be designed to meet the maximum outlet grain loading values listed in the table below, in units of grain per dry standard cubic foot (gr/dscf) of exhaust. The dust collectors shall be properly installed and in good working order and shall control particulate matter emissions, when this equipment is in operation, from the following sources:

Table 2: Fabric Filter Dust Collector Maximum Filterable Outlet Grain Loading Values

EPN	Source Name	Maximum Filterable Outlet Grain Loading (gr/dscf)
21-SK-230	Cement Kiln	0.002
51-SK-250	Finish Mill	0.005
10-BF-035	Crusher Building	0.005
10-BF-140	Material Transfer (LS to Storage)	0.005
12-BF-140	Additive Unloading (Rail)	0.005
11-BF-270	Material Transfer (LS to Hopper)	0.005

Acceptable?

Thanks!

To: Mike Meister <MMeister@trinityconsultants.com>
Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

Ok, I've re-baked in the 30-day into the records section (good point!) while keeping the bit pointing to the 1-hour records. I also added an allowance for sorbent traps for Hg, as I found an orphan comment that I never addressed directly in a previous CND version. I used the word validation – which mirrors a description in Performance Specification 12B.

- A. After the CEMS certification (or sorbent trap validation for Hg), CEMS data as specified in Special Condition No. 42 C and a 30-day rolling average NO_x, CO, SO₂, NH₃, THC, and Hg emissions, as applicable, from the kiln shall be calculated on a lb/hr basis. A new 30-day rolling average shall be calculated at the end of each day;

★ You are correct on the 0.40 lb/ton of clinker vs. 0.60 in NSPS F. I fixed that as well.

From: Mike Meister <MMeister@trinityconsultants.com>
Sent: Friday, February 2, 2024 2:34 PM
To: Joel Stanford <joel.stanford@tceq.texas.gov>
Subject: RE: A Couple of Small Fixes to BM Dorchester CNDs

This is fairly complicated, lots of moving parts in the permit, so no problem with catching last minute things. That said, for the 2nd item we think the 30 day rolling average language should remain in there because Black Mountain will need to demonstrate compliance with the permit limits on a 1-hour average basis and then with the NSPS/MACT standards on a 30 day rolling average basis. They could have to report a deviation for the hourly limit for the permit but not the NSPS/MACT standard because of the different averaging times.

And for the sake of alignment – we think that in Table 1 for SO₂ the 2nd column should state 0.4 lb/ton of clinker. That is the NSPS Subpart F (30 day rolling average limit), but check me on that.

SO ₂	0.60 lb/ton of clinker	0.640 lb/ton of clinker	0.40 lb/ton of clinker
-----------------	------------------------	-------------------------	------------------------

From: Joel Stanford <joel.stanford@tceq.texas.gov>
Sent: Friday, February 2, 2024 1:11 PM
To: Mike Meister <MMeister@trinityconsultants.com>
Subject: A Couple of Small Fixes to BM Dorchester CNDs

While working on the TRV I noticed a couple small issues that I've corrected.

- ★
1. On page 3, the H₂SO₄ limits – Moved the 1.10 lb/ton of clinker figure over into the 1-hour column to match the application. I removed the 30-day limit since none was represented, and of course left the annual.
 2. Page 14/CND 51 (Records) – Made the B reference CND 42C. Previously this had the 30 day averaging focused language.

Hopefully this should be the last changes! Sorry for the last minute nature of these.

Thanks,

Joel Stanford

Subject: RE: CAM, BM Dorchester Kiln

Sorry , also add the Finish Mill Baghouse (EPN 51-SK-250) to this query about bypasses.

I do know that CAM for PM is achieved through inspections and pressure drop readings on all baghouses – including the Kiln and Finish Mill, but wanted to check on the bypass issue.

Sent: Tuesday, January 30, 2024 11:28 AM
To: Michael Meister <MMeister@trinityconsultants.com>
Subject: CAM, BM Dorchester Kiln

Hi Mike,

We had discussed this during the draft period, but do you agree that the Kiln is subject to CAM for PM? If so, are you OK if I add it to the list of sources forbidden from having a bypass? That requirement is standard CAM language and when I updated to add all of the individual baghouses, it seems I forgot to include the kiln EPN in the list of "shall not have a bypass" (CND 51).

Per 30 TAC 122.604(c)(6) the CEMS on the cement kiln exempts this unit from CAM on NOx, but the CPMS for PM is more of a grey area where it could potentially exempt it, but it's less clear based on the rule.

FYI – I'm hoping to have NAPD issued by the end of this week. We're currently working with OCC to draft language relating to the meeting and get it plugged into the NAPD draft. I'll also send you that for Spanish translation once it's all baked in.

Thanks!

Subject: RE: Draft Permit #2 for BM Dorchester - Proposed Permit # 167047

Joel,

— Please find attached comments on the draft permit conditions (attached) as well as further discussion below. No further comments are provided on the MAERT. Once you've had a chance to look over the comments, we'd like to schedule a call to go over anything that needs additional clarification or discussion. We would like to schedule this call for Friday, 1/12, depending on your schedule.

1. Special Condition 8. Opacity for cement kiln. Based on review of the referenced permits, Black Mountain disagrees with the 5% opacity requirement applying to the proposed natural gas fired rotary cement kiln and believes that the opacity limit for the kiln should be 10 percent.
 - a. Permit No. 154671 for the Texas Lehigh Buda cement production site identifies the opacity limits as follows in Special Conditions 9 and 10:
 - All sources listed on the MAERT, except the dust collector stacks, shall be limited to 10 percent opacity.
 - Opacity of particulate matter emissions from all dust collectors' stacks shall not exceed 5 percent, average over a six-minute period.
 - Therefore, the opacity limit for the Texas Lehigh Buda cement kiln is 10 percent.
 - b. Permit No. 48196 authorizes a rotary dryer and not a kiln, which is not an equivalent comparison to the proposed natural gas fired rotary cement kiln.
 - c. Permit No. 7808 authorizes a new natural gas-fired vertical lime kiln (Kiln No. 4), which is not an equivalent comparison to the proposed natural gas fired rotary cement kiln. The other rotary lime kilns listed in Permit No. 7808 have a 10% opacity limit.
 - d. Lastly, the kiln baghouse suppliers will only guarantee a 10% opacity.

Response:

Please see the attached Texas Lehigh Permit #3611D as an example of the latest cement kiln permit issued by TCEQ which met 5% opacity. We believe that this represents BACT for cement kilns as well as for any filter controlled source in general. We believe that the supplier

* needs to find a way to meet 5%.

How was this done?

2. Special Condition 11. Table 1. Dioxins/Furans (D/F) need to be included in Table 1 because D/F were listed in Table 7-3 under the Federal Rule Applicability Section of the NSR permit application.

Response:

Noted.

3. Special Condition 13. Table 4. The maximum outlet grain loading has been revised to reflect the filterable portion of PM.

Response:

The change is accepted.

4. Special Condition 43 (Please note that this should be re-numbered as new Special Condition 14.) Reserved for Scrubber. The SO₂ scrubber will contain its own baghouse with the same PM collection efficiency as the main baghouse. The scrubber baghouse will be installed in series after the main baghouse. The flue gas treatment system will use fresh hydrated lime to be injected into the Venturi Reactor for intimate contact between the reagent and the acid gas and to provide residence time before the second reaction stage in the baghouse. The PM collected in the scrubber baghouse will be transported from the baghouse to a conditioning system where a small amount of water will be added to the recycled material before re-injection into the Venturi Reactor. A portion of the injected lime collected in the baghouse will be extracted for disposal as a waste product. The control efficiency will vary depending on the operation mode of the kiln. The SO₂ scrubber has been designed to have an approximate SO₂ control efficiency of at least 90%. The vendor has not provided information for any other pollutants.

Response:

Thank you for the additional information. The requested changes to the CND itself were accepted. The 90% representation was added along with a rider relating to clarifying the target pollutants and control efficiencies in a later as-built. I thought it better to not have an unfinished table in this iteration of the permit, so will just add H₂SO₄ etc. later on.

5. Special Condition 50. Compliance Assurance Monitoring (CAM) applies to emission sources with an uncontrolled potential to emit greater than the major source threshold. The following dust collectors will be subject to CAM based on the assumption their control efficiencies are 99%: 10-BF-035, 10-BF-140, 12-BF-140, 12-BF-315, 13-BF-500, 20-BF-010, 22-BF-160, 44-BF-030, 50-BF-350, 51-BF-050, 51-BF-140, 52-BF-110, and 53-BF-110.

Response:

Added all of these EPNs to the list in this CND.

6. Air Dispersion Modeling for kiln planned MSS - The SCR will be operating at all times when fuel is being fired in the kiln/pre-heater except during kiln heat-ups at the beginning of startup. During these times, no raw materials will be fed into the kiln. During a cold startup after major refractory work, it will take about 36 hours to heat up the kiln. This operation is expected to only occur once per year. During the kiln heat-up process, NOx emissions are estimated to range from 3 to 12 lb/hr based the AP-42 Table 1.4-1 NOx emission factor for a large (>100 MMBtu/hr) boiler equipped with a low NOx burner*.

This NOx emission rate range is well below the proposed MAERT NOx limit for normal kiln operations of 75.34 lb/hr, which is less than the kiln emission rate of 143.7 lb/hr evaluated in the Air Quality Analysis (AQA) submitted along with the initial application materials. During these kiln heat-up periods, supplemental air will be added to ensure that any combustion emissions are being exhausted. Although stack flow and temperature during these kiln heat-up periods have not been quantified, any reduction in dispersion due to stack flow and/or temperature is not expected to offset the ~13X lower NOx emissions expected during planned kiln MSS periods shown in the example below.

In addition, the total planned kiln MSS operating hours per year are expected to be not more than 72 hr/yr, which would qualify as an intermittent source under TCEQ and US EPA modeling guidance. The expected planned MSS hours are listed below:

1. Case 1 - Kiln heat-up from cold after major refractory work - estimated to occur once per year at main maintenance stoppage (36 hrs per event)
2. Case 2 - Kiln heat-up from cold after maintenance work w/o refractory work - estimated to occur once per year at secondary maintenance stoppage (12 hrs per event)
3. Case 3 - Kiln heat-up from short stoppage for secondary maintenance work not requiring a full cool-down - estimated to occur about four times per year (6 hrs per event)

Example Calculation - Maximum heat input during any warm-up case is not expected to exceed 81 MMBtu/hr. Therefore, the maximum NOx emissions during warm-up periods are estimated as follows:

$$81 \text{ MMBtu/hr} * 140 \text{ lb NOx}/10^6 \text{ scf} / 1020 \text{ Btu/scf} = 11.15 \text{ lb/hr NOx}$$

* It should be noted that the factor used for the qualitative comparison above is conservative in that it reflects a low NOx burner for a large (>100 MMBtu/hr) combustion unit, however, given that the kiln burner is a low NOx burner rated at less than 100 MMBtu/hr (peak heat input during a start up is expected to be approximately 81 MMBtu/hr), the NOx emissions from the kiln burner during start up could be as much as 36X lower than the emissions modeled in the AQA.

Response provided by ADMT:

Regarding item #6, the applicant claims any reduction in dispersion due to stack flow and/or temperature is not expected to offset the lower NOx emissions expected during planned kiln MSS periods. More information is needed to support this claim. Provide additional information that the routine scenario is still representative of worst-case operations. Additionally, please address CO emissions. Contact the ADMT if you have any questions.

Regards,
Mike

Subject: Draft Permit #2 for BM Dorchester - Proposed Permit # 167047

Hi Mike,

Attached is a second round of drafts for this project. These incorporate comments and fixes from the first round, though some items were rejected. Some notable fixes were highlighted in yellow, and I provided explanations where necessary.

I cleaned up most of the tracked changes for readability. It's definitely fine to do new ones for this round.

Please let me know if you have any questions. Given the holidays and some homework enclosed (scrubbers), I'm not going to put the customary deadlines on this and instead rely on the applicant's desire to get this moving.

Thanks,

Joel Stanford

Subject: RE: Draft Permit #2 for BM Dorchester - Proposed Permit # 167047

Joel,

Please find attached comments on the draft permit conditions (attached) as well as further discussion below. No further comments are provided on the MAERT. Once you've had a chance to look over the comments, we'd like to schedule a call to go over anything that needs additional clarification or discussion. We would like to schedule this call for Friday, 1/12, depending on your schedule.

1. Special Condition 8. Opacity for cement kiln. Based on review of the referenced permits, Black Mountain disagrees with the 5% opacity requirement applying to the proposed natural gas fired rotary cement kiln and believes that the opacity limit for the kiln should be 10 percent.
 - a. Permit No. 154671 for the Texas Lehigh Buda cement production site identifies the opacity limits as follows in Special Conditions 9 and 10:
 - All sources listed on the MAERT, except the dust collector stacks, shall be limited to 10 percent opacity.
 - Opacity of particulate matter emissions from all dust collectors' stacks shall not exceed 5 percent, average over a six-minute period.
 - Therefore, the opacity limit for the Texas Lehigh Buda cement kiln is 10 percent
 - b. Permit No. 48196 authorizes a rotary dryer and not a kiln, which is not an equivalent comparison to the proposed natural gas fired rotary cement kiln.
 - c. Permit No. 7808 authorizes a new natural gas-fired vertical lime kiln (Kiln No. 4), which is not an equivalent comparison to the proposed natural gas fired rotary cement kiln. The other rotary lime kilns listed in Permit No. 7808 have a 10% opacity limit.
 - d. Lastly, the kiln baghouse suppliers will only guarantee a 10% opacity.

Response:

Please see the attached Texas Lehigh Permit #3611D as an example of the latest cement kiln permit issued by TCEQ which met 5% opacity. We believe that this represents BACT for cement kilns as well as for any filter controlled source in general. We believe that the proposed

needs to find a way to meet 5%.

2. Special Condition 11. Table 1. Dioxins/Furans (D/F) need to be included in Table 1 because D/F were listed in Table 7-3 under the Federal Rule Applicability Section of the NSR permit application.

Response:

Noted.

3. Special Condition 13. Table 4. The maximum outlet grain loading has been revised to reflect the filterable portion of PM.

Response:

The change is accepted.

4. Special Condition 43 (Please note that this should be re-numbered as new Special Condition 14.) Reserved for Scrubber. The SO₂ scrubber will contain its own baghouse with the same PM collection efficiency as the main baghouse. The scrubber baghouse will be installed in series after the main baghouse. The flue gas treatment system will use fresh hydrated lime to be injected into the Venturi Reactor for intimate contact between the reagent and the acid gas and to provide residence time before the second reaction stage in the baghouse. The PM collected in the scrubber baghouse will be transported from the baghouse to a conditioning system where a small amount of water will be added to the recycled material before re-injection into the Venturi Reactor. A portion of the injected lime collected in the baghouse will be extracted for disposal as a waste product. The control efficiency will vary depending on the operation mode of the kiln. The SO₂ scrubber has been designed to have an approximate SO₂ control efficiency of at least 90%. The vendor has not provided information for any other pollutants.

Response:

Thank you for the additional information. The requested changes to the CND itself were accepted. The 90% representation was added along with a rider relating to clarifying the target pollutants and control efficiencies in a later as-built. I thought it better to not have an unfinished table in this iteration of the permit, so will just add H₂SO₄ etc. later on.

5. Special Condition 50. Compliance Assurance Monitoring (CAM) applies to emission sources with an uncontrolled potential to emit greater than the major source threshold. The following dust collectors will be subject to CAM based on the assumption their control efficiencies are 99%: 10-BF-035, 10-BF-140, 12-BF-140, 12-BF-315, 13-BF-500, 20-BF-010, 22-BF-110, 44-BF-030, 50-BF-350, 51-BF-050, 51-BF-140, 52-BF-110, and 53-BF-110.

Response:

Added all of these EPNs to the list in this CND.

6. Air Dispersion Modeling for kiln planned MSS - The SCR will be operating at all times when fuel is being fired in the kiln/pre-heater except during kiln heat-ups at the beginning of startup. During these times, no raw materials will be fed into the kiln. During a cold startup after major refractory work, it will take about 36 hours to heat up the kiln. This operation is expected to only occur once per year. During the kiln heat-up process, NOx emissions are estimated to range from 3 to 12 lb/hr based the AP-42 Table 1.4-1 NOx emission factor for a large (>100 MMBtu/hr) boiler equipped with a low NOx burner*.

This NOx emission rate range is well below the proposed MAERT NOx limit for normal kiln operations of 75.34 lb/hr, which is less than the kiln emission rate of 143.7 lb/hr evaluated in the Air Quality Analysis (AQA) submitted along with the initial application materials. During these kiln heat-up periods, supplemental air will be added to ensure that any combustion emissions are being exhausted. Although stack flow and temperature during these kiln heat-up periods have not been quantified, any reduction in dispersion due to stack flow and/or temperature is not expected to offset the ~13X lower NOx emissions expected during planned kiln MSS periods shown in the example below.

In addition, the total planned kiln MSS operating hours per year are expected to be not more than 72 hr/yr, which would qualify as an intermittent source under TCEQ and US EPA modeling guidance. The expected planned MSS hours are listed below:

1. Case 1 - Kiln heat-up from cold after major refractory work - estimated to occur once per year at main maintenance stoppage (36 hrs per event)
2. Case 2 - Kiln heat-up from cold after maintenance work w/o refractory work - estimated to occur once per year at secondary maintenance stoppage (12 hrs per event)
3. Case 3 - Kiln heat-up from short stoppage for secondary maintenance work not requiring a full cool-down - estimated to occur about four times per year (6 hrs per event)

Example Calculation - Maximum heat input during any warm-up case is not expected to exceed 81 MMBtu/hr. Therefore, the maximum NOx emissions during warm-up periods are estimated as follows:

$$81 \text{ MMBtu/hr} * 140 \text{ lb NOx}/10^6 \text{ scf} / 1020 \text{ Btu/scf} = 11.15 \text{ lb/hr NOx}$$

* It should be noted that the factor used for the qualitative comparison above is conservative in that it reflects a low NOx burner for a large (>100 MMBtu/hr) combustion unit; however, given that the kiln burner is a low NOx burner rated at less than 100 MMBtu/hr (peak heat input during a start-up is expected to be approximately 81 MMBtu/hr), the NOx emissions from the kiln burner during start up could be as much as 36X lower than the emissions modeled in the AQA.

Response provided by ADMT:

Regarding item #6, the applicant claims any reduction in dispersion due to stack flow and/or temperature is not expected to offset the lower NOx emissions expected during planned kiln MSS periods. More information is needed to support this claim. Provide additional information that the routine scenario is still representative of worst-case operations. Additionally, please address CO emissions. Contact the ADMT if you have any questions.

Regards,
Mike

Subject: Draft Permit #2 for BM Dorchester - Proposed Permit # 167047

Hi Mike,

Attached is a second round of drafts for this project. These incorporate comments and fixes from the first round, though some items were rejected. Some notable fixes were highlighted in yellow, and I provided explanations where necessary.

I cleaned up most of the tracked changes for readability. It's definitely fine to do new ones for this round.

Please let me know if you have any questions. Given the holidays and some homework involved (scrubbers), I'm not going to put the customary deadlines on this and instead rely on the applicant's desire to get this moving.

Thanks,

40

Joel Stanford

Subject: RE: Draft Permit #2 for BM Dorchester - Proposed Permit # 167047

Joel,

Please find attached comments on the draft permit conditions (attached) as well as further discussion below. No further comments are provided on the MAERT. Once you've had a chance to look over the comments, we'd like to schedule a call to go over anything that needs additional clarification or discussion. We would like to schedule this call for Friday, 1/12, depending on your schedule.

1. Special Condition 8. Opacity for cement kiln. Based on review of the referenced permits, Black Mountain disagrees with the 5% opacity requirement applying to the proposed natural gas fired rotary cement kiln and believes that the opacity limit for the kiln should be 10 percent.
 - a. Permit No. 154671 for the Texas Lehigh Buda cement production site identifies the opacity limits as follows in Special Conditions 9 and 10:
 - All sources listed on the MAERT, except the dust collector stacks, shall be limited to 10 percent opacity.
 - Opacity of particulate matter emissions from all dust collectors' stacks shall not exceed 5 percent, average over a six-minute period.
 - Therefore, the opacity limit for the Texas Lehigh Buda cement kiln is 10 percent.
 - b. Permit No. 48196 authorizes a rotary dryer and not a kiln, which is not an equivalent comparison to the proposed natural gas fired rotary cement kiln.
 - c. Permit No. 7808 authorizes a new natural gas-fired vertical lime kiln (Kiln No. 4), which is not an equivalent comparison to the proposed natural gas fired rotary cement kiln. The other rotary lime kilns listed in
Permit No. 7808 have a 10% opacity limit.
 - d. Lastly, the kiln baghouse suppliers will only guarantee a 10% opacity.

Response:

Please see the attached Texas Lehigh Permit #3611D as an example of the latest cement kiln permit issued by TCEQ which met 5% opacity. We believe that this represents BACT for cement kilns as well as for any filter controlled source in general. We believe that the supplier needs to find a way to meet 5%.

2. Special Condition 11. Table 1. Dioxins/Furans (D/F) need to be included in Table 1 because D/F were listed in Table 7-3 under the Federal Rule Applicability Section of the NSR permit application.

Response:

Noted.

3. Special Condition 13. Table 4. The maximum outlet grain loading has been revised to reflect the filterable portion of PM.

Response:

The change is accepted.

4. Special Condition 43 (Please note that this should be re-numbered as new Special Condition 14.) Reserved for Scrubber. The SO₂ scrubber will contain its own baghouse with the same PM collection efficiency as the main baghouse. The scrubber baghouse will be installed in series after the main baghouse. The flue gas treatment system will use fresh hydrated lime to be injected into the Venturi Reactor for intimate contact between the reagent and the acid gas and to provide residence time before the second reaction stage in the baghouse. The PM collected in the scrubber baghouse will be transported from the baghouse to a conditioning system where a small amount of water will be added to the recycled material before re-injection into the Venturi Reactor. A portion of the injected lime collected in the baghouse will be extracted for disposal as a waste product. The control efficiency will vary depending on the operation mode of the kiln. The SO₂ scrubber has been designed to have an approximate SO₂ control efficiency of at least 90%. The vendor has not provided information for any other pollutants.

Response:

Thank you for the additional information. The requested changes to the CND itself were accepted. The 90% representation was added along with a rider relating to clarifying the target pollutants and control efficiencies in a later as-built. I thought it better to not have an unfinished table in this iteration of the permit, so will just add H₂SO₄ etc. later on.

5. Special Condition 50. Compliance Assurance Monitoring (CAM) applies to emission sources with an uncontrolled potential to emit greater than the major source threshold. The following dust collectors will be subject to CAM based on the assumption their control efficiencies are 99%: 10-BF-035, 10-BF-140, 12-BF-140, 12-BF-315, 13-BF-500, 20-BF-010, 22-BF-160, 44-BF-030, 50-BF-350, 51-BF-050, 51-BF-140, 52-BF-110, and 53-BF-110.

Response:

Added all of these EPNs to the list in this CND.

6. Air Dispersion Modeling for kiln planned MSS - The SCR will be operating at all times when fuel is being fired in the kiln/pre-heater except during kiln heat-ups at the beginning of startup. During these times, no raw materials will be fed into the kiln. During a cold startup after major refractory work, it will take about 36 hours to heat up the kiln. This operation is expected to only occur once per year. During the kiln heat-up process, NO_x emissions are estimated to range from 3 to 12 lb/hr based the AP-42 Table 1.4-1 NO_x emission factor for a large (>100 MMBtu/hr) boiler equipped with a low NO_x burner*.

This NO_x emission rate range is well below the proposed MAERT NO_x limit for normal operations of 75.34 lb/hr, which is less than the kiln emission rate of 143.7 lb/hr evaluated in the Air Quality Analysis (AQA) submitted along with the initial application materials. During

44

these kiln heat-up periods, supplemental air will be added to ensure that any combustion emissions are being exhausted. Although stack flow and temperature during these kiln heat-up periods have not been quantified, any reduction in dispersion due to stack flow and/or temperature is not expected to offset the ~13X lower NOx emissions expected during planned kiln MSS periods shown in the example below.

In addition, the total planned kiln MSS operating hours per year are expected to be not more than 72 hr/yr, which would qualify as an intermittent source under TCEQ and US EPA modeling guidance. The expected planned MSS hours are listed below:

1. Case 1 - Kiln heat-up from cold after major refractory work - estimated to occur once per year at main maintenance stoppage (36 hrs per event)
2. Case 2 - Kiln heat-up from cold after maintenance work w/o refractory work - estimated to occur once per year at secondary maintenance stoppage (12 hrs per event)
3. Case 3 - Kiln heat-up from short stoppage for secondary maintenance work not requiring a full cool-down - estimated to occur about four times per year (6 hrs per event)

Example Calculation - Maximum heat input during any warm-up case is not expected to exceed 81 MMBtu/hr. Therefore, the maximum NOx emissions during warm-up periods are estimated as follows:

$$81 \text{ MMBtu/hr} * 140 \text{ lb NOx}/10^6 \text{ scf} / 1020 \text{ Btu/scf} = 11.15 \text{ lb/hr NOx}$$

* It should be noted that the factor used for the qualitative comparison above is conservative in that it reflects a low NOx burner for a large (>100 MMBtu/hr) combustion unit; however, given that the kiln burner is a low NOx burner rated at less than 100 MMBtu/hr (peak heat input during a start-up is expected to be approximately 81 MMBtu/hr), the NOx emissions from the kiln burner during start-up could be as much as 36X lower than the emissions modeled in the AQA.

Response provided by ADMT:

Regarding item #6, the applicant claims any reduction in dispersion due to stack flow and/or temperature is not expected to offset the lower NOx emissions expected during planned kiln MSS periods. More information is needed to support this claim. Provide additional information that the routine scenario is still representative of worst-case operations. Additionally, please address CO emissions. Texas Commission on Environmental Quality
Form PI-1 General Application
Public Notice

Date: October 2023
Permit #: 167047
Company: BM Dorchester LLC

III. Small Business Classification

Complete this section to determine small business classification. If a small business requests a permit, agency rules (30 TAC § 39.603(f)(1)(A)) allow for alternative public notification requirements if all of the following criteria are met. If these requirements are met, public notice does not have to include publication of the prominent (12 square inch) newspaper notice.

Does the company (including parent companies and subsidiary companies) have fewer than 100 employees or less than \$6 million in annual gross receipts?	Yes
Is the site a major source under 30 TAC Chapter 122, Federal Operating Permit Program?	Yes
Small business classification:	No

Subject: Modeling Request for Information: 167047 BM Dorchester LLC (Initial, 335160)

Good morning, Mike,

We have finished our review of the Air Quality Analysis provided for 167047 BM Dorchester LLC (Initial, 335160) and a few items came up that will need to be addressed, please see below.

1. For the Class 1 analysis, please provide the calculations used to obtain the 24-hr and annual MERP values at distances beyond 200km, as well as the calculation used to determine the 24-hr and annual secondary contribution of PM_{2.5} for the Class 2 analysis.

Response - The distance-dependent MERPs were downloaded from EPA's MERPs View Qlik (<https://www.epa.gov/scrpm/merps-view-qlik>). See the provided spreadsheet "Blk_Mtn_MERP_PM25_2023_0705.xlsx" in the MERPs folder.

2. Section 6.3.1 of the Air Quality Analysis references Section 8.3.3 of Appendix W to Part 51 - "Guideline on Air Quality Models" and EPA's 1-hour NO₂ modeling guidance as it relates to what nearby sources to explicitly model for a cumulative impact assessment. Relying on this guidance and establishing a 10km distance for off-property sources to be included seems reasonable for the full NAAQS analysis, however it is unclear how this guidance would be applicable for the full Increment analysis considering there is no ambient monitoring data component. Please address.

Response - EPA's Guidance for Ozone and Fine Particulate Matter Permit Modeling (EPA-454/R-22-005), Section V.3.2, addresses the PM_{2.5} Increment Cumulative Analysis and states:

"As part of the determination of which existing sources should be included in the cumulative analysis, it will be necessary to identify the total area in which a significant impact from the new or modified PSD source will occur."

The largest radius of impact is for the 24-hr PM_{2.5} impact and equalled 9.58 km. The other radius of impact were

- 6.48 km for annual PM_{2.5},
- 1.78 km for 24-hour PM₁₀, and
- 1.70 km for annual PM₁₀.

In response to the below items 3 and 4, the increment inventory has been expanded to include all quantified increment consuming PM_{2.5} and PM₁₀ emissions within approximately 10 km of the project site.

3. It is unclear what date was used as the cutoff for the off-property inventory development. Please explain.

Response - The cutoff of the off-property inventory development was the October 2022 permit updates.

4. The following RN's were identified to be within the defined 10km area for off-property sources but were not included in the off property inventory: RN110780335, RN110823325, RN111112314, and RN111213443. Please explain.

Response - The PM_{2.5} and PM₁₀ increment modeling has been updated as described in the provided electronic files.

- Table B-1 Updates 2023-0711.pdf - Summary of the additional PPS evaluated
- Table B-2 Updates 2023-0711.pdf - The TCEQ records search results for the PPS evaluated
- Table B-3 Updates 2023-0711.pdf - The off-property inventory updates

The above files and supporting documents from TCEQ files are provide in the "Increment" folder in the provided electronic files. The updated AERMOD modeling runs and results (PM_{2.5} Table C-3 Increment Results and 0711.pdf) are provided in the "AERMOD" folder.

5. RN100217223 and RN100858299 were both identified as off-property sources located within 10km of the project site. Table B-1 noted that both RN's are only authorized by PBR and emissions are accounted for in the background. Please explain how the emissions from RN100217223 and RN100858299 are accounted for in the full increment analysis.

Response:

- RN100858299 FINISAR SHERMAN has been added the $PM_{2.5}$ and PM_{10} increment modeling. These updates are included with the item 4 response.
- RN100217223 SUNNY DELIGHT BEVERAGES – The active PBR authorization (Standard Exemptions) are discussed in the Table B-1 Updates 2023-0711.pdf – Summary of the additional RNs evaluated provided with the item 4 response. All the PBR authorizations pre-date the $PM_{2.5}$ minor source baseline date for Grayson County of June 23, 2014. Therefore, none of these emissions consume $PM_{2.5}$ increment. As for PM_{10} , since the late '90s (the current PBR authorization range in dates from 1/11/1994 through 6/6/1997), several permitting (NSR and Title V) actions have occurred, and all have been canceled except for the 5 PBR authorizations listed in the summary. The site has changed ownership from Folgers Coffee to Sunny Delight, and all coffee operations related to the above authorizations appear to have ended. In addition, the site is over 5 km away from any significant PM_{10} receptor; therefore, any PM_{10} emissions from these authorizations would not be expected to have a significant impact to the PM_{10} increment modeling.

6. Please provide an explanation of how EPN MSSFUG was modeled and what the limited hours of operation per day represent for each of the model ID's.

Response: EPN MSSFUG was modeled with the following model ID's and operating limits:

- MSSFUG - ILE MSS Activities - CEMS Calibration - Modeled using a volume source at the general location of the Kiln CEMS. Operations are not limited (24 hr/day).
- MSSVACLD - ILE MSS Activities Vacuum Truck Loading - Modeled as a point source at the general location of the area that requires cleaning using a vacuum truck. Operations are limited to 8 hrs/day.
- MSSRFAC - ILE MSS Activities - Refractory Removal - Modeled using a volume source at the location of the Kiln. Operations are limited to 12 hrs/day.
- MSSVACUD - ILE MSS Activities Vacuum Truck Unloading - Modeled using a volume source at the location of the Limestone - Material Handling LS Crusher Building. It is anticipated that the material collected by the Vacuum Truck will be recycled thru the process. Operations are limited to 1 hr/day.

7. Please provide a description of the two modeled scenarios: 21SK_OFF and 21SK_ON.

Response - Emission Point Number [EPN] 21-SK-230 is the shared stack for the natural gas fired preheater / precalciner kiln system with inline raw mill and clinker cooler and has the following two operating modes:

- Raw Mill Off - The stack parameters do not include the raw mill's contribution (Model ID: 21SK_OFF), and
- Raw Mill On - The stack parameters including the raw mill's contribution (Model ID: 21SK_ON)

All other EPNs are independent of the operation of the raw mill and are included in both scenarios.

8. Please provide the supporting files used to run the AERSURFACE analysis: National Land Cover Data, Impervious Cover, and Tree Canopy.

Response - The requested files are included with the electronic files. See the "AERSURFACE" folder.

9. Please provide justification for relying on 2019-2021 SO_2 monitoring data from EPA AIRS monitor 481390016 as opposed to relying on a different SO_2 monitor with the most recent years of data, 2020-2022.

Response - EPA Site Number 48-139-0016 (Midlothian OFW Monitor) was shut down in 2022. Therefore, 2019-2021 are the most recent years of complete data. The Midlothian OFW Monitor has several nearby sources of SO_2 emissions, including three Cement Mills within 6.2 km. The SO_2 emissions from sources within 10 km of the Midlothian OFW Monitor are more than 100 times higher than the sources within 10 km of the project site.

There are two additional SO_2 monitors in the Dallas-Fort Worth-Arlington, TX Core Based Statistical Area (CBSA):

- EPA AIRS monitor 481130069 (Dallas Hinton) which does not have complete data for the calendar year 2020. Therefore, the most recent three years of data, 2020-2022, are not available. Also, the Dallas Hinton monitor is located (within 10 km) and county-wide SO_2 emissions than the Midlothian OFW Monitor.
- EPA AIRS monitor 482570005 (Kaufman) which does not have any nearby sources of SO_2 and has less than 100 times SO_2 emissions than the Midlothian OFW Monitor. Therefore, the monitor does not meet the criteria for selecting a monitor with equal to or more emissions.

For the above reasons, the Midlothian OFW Monitor was selected as the representative background SO_2 monitor. The supporting calculations are provided in the spreadsheet "Bk_Mt_SO2_Monitor_Justification_for_TCRA_2022_SO2".

Please address all items outlined above within 7 business days of the date of this public notice. Failure to submit all of these responses will result in the project being denied.

50

information will delay the technical review of the application.

Subject: Request for Information: BM Dorchester (Permit No. 167047)
Importance: High

Good afternoon Mike,

I am looking over the modeling files provided for BM Dorchester and for the PM10 24-hr full NAAQS analysis, older files that rely on 2014-2018 met data were provided. Could you please provide the PM10 24-hr full NAAQS analysis that relies on the newer met data set, 2017-2021 as soon as possible?

Thank You,

Rachel Melton

Dorchester_PSD_Modeling_Protocol_Revised 2023-0606.pdf

Joel,

Attached are the revised AQ Modeling Protocol and PSD AQA for BM Dorchester, as discussed on our teleconference last week. Supporting files (model I/O files, EMEW, etc.) are included in a zip file that, due to its size, is provided via the link included in this transmittal email. The link is accessible for 30 days but let me know if you need additional time to download or if there are any issues in downloading the zip file.

Thanks,
Mike

☒ I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)

Black Mountain has no history of successfully operating a cement mill and thus, alone, cannot demonstrate a history of compliance with Texas' environmental laws or properly operating such a mill. However, upon information and belief, its members do have a history of operating such a mill.

Please give this form to the person at the information table. Thank you.

operating concrete/aggregate facilities in Texas and this history is very poor, which is why they were elected to operate under a different name. The member has demonstrated actual contempt for state & municipal regulations/laws.

Further, I and one of my sons have ^{asthma} (mine is borderline COPD) and the ^{diminished} air quality would have a significant health risk to me and my family, likely causing ~~to~~ us to move. We have a right to the quiet and peaceful enjoyment of our property without the risk posed by this cement mill.

We protest the cement factory permit to be located near Dorchester, TX. We have a 60 yr. old disabled chemically sensitive daughter who lives on an isolated 6 acre lot near Howe, TX. That was purchased in 1996 to provide a safe place for her to live. We lived there for a while but found we could not live there acceptably in

Please give this form to the person at the information table. Thank you.
Such isolation. It has been wonderful for her to isolate & function there. Please do not threaten the loss of this haven for her existence. 02096

We are members of First Class North Texas (FCNT) and we have approximately 200 ^{7 new 01/13} kids attending Homeschool Co-op at First Baptist Dorchester Church, which is located immediately adjacent to the new kiln.

The National Library of Medicine published an article in 2021 titled "Bioaccumulation of Toxic Metals in Children Exposed to Urban Pollution and to Cement Plant Emissions." In this article, they found kids going to school and living in the emission zone of a cement kiln had three (3x) times the levels of heavy metals in their toe nail clippings. These metals included Nickel (Ni), Cadmium (Cd), Mercury (Hg), and Arsenic (As). The kilns met the environmental standards, but heavy metal pollution happens over a long period of time. An interesting note is the bag filters on the stacks only removed 60% of the mercury allowing on average 40% to escape. With the church and school being only 600 feet from the property line, the long term exposure needs to be considered. Heavy metals do not go away. When consumed, they remain in the body and build over a lifetime causing detrimental effects on personal health. In the study, people living closest to the cement kiln experienced annual mean PM_{10} concentrations above $20 \mu m/m^3$, which exceeds the World Health Organization's (WHO) limit.

This would directly impact not only the communities around but also property values. We need a contested case hearing. There is so much not being disclosed to the public on the bigger effect of this project.

Please give this form to the person at the information table. Thank you.

How will it affect water, property values and taxes etc. We are NOT for this!!
Not enough room to write full thoughts.

My family settled in Grayson Co. in 1836. While I understand we cannot stop "progress," I have no desire to see this area turned into Chicago or Detroit. I want clean air and water. The promises you're making are the same meaningless "state of the art" statements we heard from the Rushing family concerning the asphalt/concrete plant in Pottsboro. Please give this form to the person at the information table. Thank you. None of their promises were kept. I have no faith in your ability to fulfill your "guarantees." I am bitterly opposed to the approval of this construction!

So your monitors pick up violations, we have no recourse to stop them. And so there's a law against dust, noise, pollution, who'll put a stop to it? So monitors "catch" issues, we have no way to rid ourselves of this.

I have many concerns regarding the proposed Black Mountain cement plant in Dorchester TX. It is well known that air pollution does not stay within a few miles of the source. Denton TX is among the most polluted communities in North Texas because

Please give this form to the person at the information table. Thank you. (over)

of the pollution from Midlothian.

Potential problems include respiratory problems, increased incidences of asthma in children and elderly, Increased cardiac complications, neurological problems from inhaling the vapor, and increased rates of cancer.

There are other factors of concern:

- 1) the application does not include special equipment that is not already in use at other plants, yet the company representatives state publicly that this plant will have better capacity to contain pollution.
- 2) degradation of the environment that will effect property owners nearby in southern Grayson County, including food production
- 3) water quality is not addressed or a concern to Black Mountain
- 4) decreased property values
- 5) concrete blasting could jeopardise nearby high tech companies production of computer chips.
- 6) problems with inaccurate and incomplete information in the application

This was proposed more than a year ago and
was defeated. It's unthinkable that it would
be raised or considered again at all.

I live with my family and children about a mile
from the proposed site. The fumes and air pollution
with the winds we have here will be beyond your
comprehension. During the summer at an elevation
the winds are a constant issue and the dust and pollution
from this will affect all residents of Sherman.
What will this do to our grandchildren with both Sherman
and Weatherford wells in close proximity.

What will the micro tremors from the blasting
causing inconsistencies in the oil products.

They lied in the application. we are much closer
than 10 kilometers to Weatherford, the just don't want
to get permits from both Texas, Oklahoma and
the tribal nation.

Notice of Objection-Proposed Cement Company Establishment Near Public Airport

Dear TCEQ,

We are writing to inform you of our objection to the proposed establishment of the cement company Black Mountain within proximity to our public airport. Our airport, Aerosport Aerodrome, serves as a critical hub for air transportation in the region, facilitating both commercial and private flights. Ensuring the safety and efficiency of our operations is of paramount importance.

Upon review of the proposed location for the cement company, we have identified that it falls within proximity of 600 feet from the perimeter of our airport. Such proximity poses significant concerns regarding potential hazards to air navigation, especially during takeoff and landing procedures.

As per Federal Aviation Administration (FAA) regulations outlined in Title 14 of the Code of Federal Regulations (14CFR) Part 77, structures erected near airports must adhere to specific height restrictions and safety standards to prevent obstructions to air traffic. The proposed cement company may present an obstructive to navigable airspace, thereby compromising the safety of aircraft operations.

In consideration of these factors, we respectfully request you reconsider the location of the cement company or undertake appropriate measures to mitigate potential hazards to air navigation. This may include relocating the establishment to a safer distance from the airport or implementing height restrictions that comply with FAA regulations.

We understand the importance of economic development initiatives; however, the safety and integrity of our airport operations cannot be compromised.

We'd like to request a contested case hearing to have the ability to use it at a later time.

We appreciate your attention to this issue and look forward to a constructive dialogue.

Sincerely

Caroline Yuan

Property manager

Dorchester is in the center of Grayson County
In the middle of two major Highway 75 and 289,
is the "bed room" of Grayson County, many schools
close by with so many students, Families with elderly
have Asthma, COPD, and close by water will be polluted
common sense the facility not appropriate to
Building the area and Grayson County !!!

As a beekeeper less than 10 miles from the site of the proposed limestone mine and kiln, I object to this business. Limestone dust, air pollution and noise pollution →

Please give this form to the person at the information table. Thank you.

will destroy my bees' forage; and pollute their wax,
honey, and likely lead them to gather the dust and soot
when they gather dust-like substances in the Fall. My
bees are livestock and protected under Texas law.
Our land is also a migratory waystation for Monarch
butterflies and the pollution may endanger their lives.

~~Five~~ 3

Please give this form to the person at the information table. Thank you.

We live 3 miles from the site. We homeschool, have a 5 year old with lung issues, and are terrified for his health. Being so close in proximity to the site is an absolute detriment to his health. - Do you personally wish to place your children's lungs under this distress? This is absolutely appalling.

Federal + State laws are subject to change - if, in time, ~~they are~~ regulations are changed to become more strict based upon evidence of impact to human health, would this plant be forced to comply or could they be grandfathered in.

Please give this form to the person at the information table. Thank you.

Additionally, would impacted citizens be able to seek legal action?

RECEIVED

MAR 25 2024

PUBLIC MEETING

Although it falls outside of TCEQ purview, I am very concerned about the impact to local water and soil. For instance, nearby resident may use a well for their water source and may garden and grow their own food. How is the plant planning to mitigate contamination to groundwater, vegetation, and soil?

Runoff water from plant containing contaminants + pollutants will recharge aquifers impacting water quality and well water. This could potentially impact humans, animals, soil, water, and food.

Changing filters only when the kiln is down after stating that continuous use is common is concerning as continuous use may cause filter changing/maintenance to fall behind resulting in failure and causing damage.

There is limited research available on potential impact to reproductive and immune health - I am concerned for a plant producing such toxic materials to be nearby. How is the plant addressing these issues? ~~and~~ Note PG + E case and previous insisting from the company + federal government that they were not responsible for citizen health issues. Proven false.

IMPACT & RESPONSIBILITY REGARDING HAGERMAN WILDLIFE REFUGE (AIR QUALITY/WATER QUALITY,

CHEMICALS USED TO CLEAN EQUIPMENT ~~4~~ - WHAT SAFETY REQUIREMENTS ARE IN PLACE TO ENSURE NO RUNOFF/DOWNSTREAM IMPACTS TO COMMUNITY

LIGHT & NOISE POLLUTION MANAGEMENT PRACTICES & COMPLIANCE

INVISIBLE POLLUTANTS NOT REGULATED BY FEDERAL/STATE LAWS ~~THE~~ WILL CROSS PROPERTY LINES

& IMPACT COMMUNITY

Please give this form to the person at the information table. Thank you.

The future industry for Grayson County is chip + chip water development. The planned kiln + quarry proposed will include the use of explosives within the bedrock which is critical to the stability of highly sensitive equipment used in the chip water manufacturing process. This type of industry ^{negative} impact to the natural environment it will cause will be catastrophic to the ~~future~~ ^{economy} ~~economy~~ of this ~~reg~~ county + region. I respectfully request the TERC deny the permit for this facility.

☒ I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)

- ① What provisions will be in place to contain particulates in the event of a tornado?
- ② In drought conditions, how would water usage be prioritized?
Is water supply sufficient?
- ③ How would ground vibration and dust affect semiconductor manufacturing in this area? Chips should take priority!

Please give this form to the person at the information table. Thank you.

④ Does the dust know it's not supposed to cross property lines?

⑤ Do the benefits outweigh the risks? No! Who wants this here?

RECEIVED

MAR 25 2021

AT PUBLIC MEETING

- ⑥ Have Oklahoma residents been involved in this process? They're within the drift radius.
 - ⑦ What effect will dust have on ag-producing land in area? Will human + livestock food grown locally be safe?
 - ⑧ How is water pollution being prevented (and don't tell me you're going to figure it out. Do you even know what would be necessary)
 - ⑨ What will be effect of quarry op's on livestock, mentally + physically? Horses' limb/joint development can be affected by vibration of ground, crippling the animals.
 - ⑩ What is the average rate of failure of the proposed safety systems? If there is a failure, worst case what would the damage result be?
 - ⑪ Would this emit "light" pollution? (ie, bright lighting at night)
- This project should have been rejected early on + would have saved time + money. Common sense would make that clear to anyone.
- ⑫ What will be done about 902/289 intersection, which is already a problem before you add in the new traffic this operation will bring.

Common Sense is lost on today's world, in most situations. My sense is when some tells me we will comply, they will for a while or try but over time will get lax on compliance. Common Sense also tells me that air pollutants do not stop at property lines. I live within 5-6 miles of proposed plant and if the wind is right and strong enough pollutants will spread ^{to my home}. There is no wall or fence that can stop it. Common Sense also tells me that others will not move here also because of the plant. That will hurt everyone financially.

We moved here, from the metroplex, ten years ago to get away from the pollution and increasingly poor air quality. I suffered from what I thought was allergies almost year round. On my farm ^{to the} east of the Dorchester plant (across 75 in Luella), I am surrounded by cedars and all types of plants and flowers and no longer have respiratory ~~syst~~ symptoms; it was pollution and particulates in the air.

I also run a farm, a farmers market and own animals and bees. I fear that the increased pollution will affect our bees and their honey as well as the health and quality of the fruits and vegetables we produce. I appreciate you taking my comments into consideration.

Have you considered effect on TI and chip factory as extremely sensitive to seismic activity and blasting?

There is no 100% failsafe. So considering that if you are not willing to live next door to what you are building do you think it is right to ask us to?

Please give this form to the person at the information table. Thank you.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

April 15, 2025

TO: All Interested Persons

RE: BM Dorchester LLC
Air Quality Permit Nos. 167047, GHGPSDTX212, and PSDTX1602

Enclosed with this letter are instructions to view the Executive Director's Response to Public Comment (RTC) on the Internet. Individuals who would prefer a mailed copy of the RTC or are having trouble accessing the RTC on the website, should contact the Office of the Chief Clerk, by phone at (512) 239-3300 or by email at chiefclk@tceq.texas.gov.

Should you have any questions, please contact Ellie Guerra of the Texas Commission on Environmental Quality's Office of the Chief Clerk (MC 105) at (512) 239-3329.

Sincerely,

A handwritten signature in black ink that reads "Laurie Gharis". The signature is written in a cursive, flowing style.

Laurie Gharis
Chief Clerk

LG/erg

Enclosure

**EXECUTIVE DIRECTOR'S RESPONSE TO PUBLIC COMMENT
for
BM Dorchester LLC
Air Quality Permit Nos. 167047, GHGPSDTX212, and PSDTX1602**

The Executive Director has made the Response to Public Comment (RTC) for the application by BM Dorchester LLC for Air Quality Permit Nos. 167047, GHGPSDTX212, and PSDTX1602, available for viewing on the Internet. You may view and print the document by visiting the TCEQ Commissioners' Integrated Database at the following link:

<https://www.tceq.texas.gov/goto/cid>

In order to view the RTC at the link above, enter the TCEQ ID Number for this application (167047, GHGPSDTX212, or PSDTX1602) and click the "Search" button. The search results will display a link to the RTC.

Individuals who would prefer a mailed copy of the RTC or are having trouble accessing the RTC on the website, should contact the Office of the Chief Clerk, by phone at (512) 239-3300 or by email at chiefclk@tceq.texas.gov.

Additional Information

For more information on the public participation process, you may contact the Office of the Public Interest Counsel at (512) 239-6363 or call the Public Education Program, toll free, at (800) 687-4040.

A complete copy of the RTC (including the mailing list), the complete application, the draft permit, and related documents, including comments, are available for review at the TCEQ Central Office in Austin, Texas. Additionally, a copy of the permit application, executive director's preliminary decision, draft permit, and the executive director's preliminary determination summary and executive director's air quality analysis, will be available for viewing and copying at the TCEQ Central Office, the TCEQ Dallas/Fort Worth Regional Office, and at the Howe Community Library, 315 South Collins Freeway, Howe, Grayson County, Texas. The facility's compliance file, if any exists, is available for public review at the TCEQ Dallas/Fort Worth Regional Office, 2309 Gravel Drive, Fort Worth, Texas.

Translate Documents Using Google Translate

You can translate documents up to 10 MB in any of these formats: .docx, .pdf, .pptx, .xlsx. PDF files must be 300 pages or less. To translate more documents or larger documents, [learn about the Cloud Translation API](https://cloud.google.com/translate)¹.

Important: Document translation isn't available on smaller screens or mobile (cell phones). You can find text in images and scanned .pdf pages in the output document but they aren't translated.

1. In your browser, go to [Google Translate](https://cloud.google.com/translate)².
2. At the top, click **Documents**.
3. Choose the languages to translate to and from.
4. To automatically set the original language of a document, click **Detect language**.
5. Click the blue **Browse your computer** button.
6. Select the file you want to translate.
7. Click **Translate** and wait for the document to finish translating.
8. Click **Download translation** to download your translated document.
9. Get more information at [Translate documents & websites - Computer - Google Translate Help](https://support.google.com/translate/answer/2534559?hl=en&co=GENIE.Platform%3DDesktop&oco=1)³.

Translate Documents using Microsoft Translator

1. Open document in Word.
2. Select **Review > Language > Translate > Translate Document**.
3. Select a language to conduct the translation.
4. Select **Translate**. A copy of the translated document will open in a separate window.
5. Select **OK** in the original window to close translator.
6. Get more information at [Microsoft Translator for Personal Use - Microsoft Translator](https://www.microsoft.com/en-us/translator/personal/)⁴.

¹ <https://cloud.google.com/translate>

² <https://cloud.google.com/translate>

³ <https://support.google.com/translate/answer/2534559?hl=en&co=GENIE.Platform%3DDesktop&oco=1>

COMISIÓN DE CALIDAD AMBIENTAL DE TEXAS
Protegiendo a Texas mediante la Reducción y Prevención de la Contaminación

15 de abril de 2025

PARA: Todas las personas interesadas.

RE: BM Dorchester LLC
Calidad del Aire Permiso Nos. 167047, GHGPSDTX212, y PSDTX1602

Se adjuntan a esta carta las instrucciones para ver en Internet la Respuesta del Director Ejecutivo al Comentario Público (RTC). Las personas que prefieran una copia por correo del RTC o que tengan problemas para acceder al RTC en el sitio web, deben comunicarse con la Oficina del Secretario Oficial, por teléfono al (512) 239-3300 o por correo electrónico a chiefclk@tceq.texas.gov.

Si tiene alguna pregunta, comuníquese con Ellie Guerra de la Oficina del Secretario Oficial de la Comisión de Calidad Ambiental de Texas (MC 105) al (512) 239-3329.

Atentamente,

A handwritten signature in black ink that reads "Laurie Gharis".

Laurie Gharis
Secretaria Oficial

LG/erg

Recinto

RESPUESTA DEL DIRECTOR EJECUTIVO AL COMENTARIO DEL PÚBLICO
para
BM Dorchester LLC
Calidad del Aire Permiso Nos. 167047, GHGPSDTX212, y PSDTX1602

El Director Ejecutivo ha puesto a disposición de Internet la respuesta al comentario público (RTC) para la solicitud de BM Dorchester LLC del Calidad del Aire Permiso Nos. 167047, GHGPSDTX212, y PSDTX1602. Puede ver e imprimir el documento visitando la Base de Datos Integrada de los Comisionados de TCEQ en el siguiente enlace:
<https://www.tceq.texas.gov/goto/cid>

Para ver el RTC en el enlace anterior, ingrese el número de identificación TCEQ para esta solicitud (167047, GHGPSDTX212, o PSDTX1602) y haga clic en el botón "Buscar". Los resultados de la búsqueda mostrarán un enlace al RTC.

Las personas que prefieran una copia por correo del RTC o que tengan problemas para acceder al RTC en el sitio web, deben comunicarse con la Oficina del Secretario Oficial, por teléfono al (512) 239-3300 o por correo electrónico a chiefclk@tceq.texas.gov.

Información adicional

Para obtener más información sobre el proceso de participación pública, puede comunicarse con la Oficina del Asesor de Interés Público al (512) 239-6363 o llamar al Programa de Educación Pública, al número gratuito, (800) 687-4040.

Una copia completa del RTC (incluida la lista de correo), la solicitud completa, el borrador del permiso y los documentos relacionados, incluidos los comentarios, están disponibles para su revisión en la Oficina Central de TCEQ en Austin, Texas. Además, una copia de la solicitud del permiso, la decisión preliminar del director ejecutivo, el permiso preliminar, el resumen de la determinación preliminar del director ejecutivo y el análisis de calidad del aire del director ejecutivo estarán disponibles para su visualización y copia en la Oficina Central de la TCEQ, la Oficina Regional de TCEQ en Dallas/Fort Worth y en la Biblioteca Comunitaria de Howe, 315 South Collins Freeway, Howe, Condado de Grayson, Texas. El archivo de cumplimiento de la instalación, si existe alguno, está disponible para revisión pública en la Oficina Regional de TCEQ en Dallas/Fort Worth, 2309 Gravel Drive, Fort Worth, Texas.

Traducir documentos usando Google Translate

Puede traducir documentos de hasta 10 MB en cualquiera de estos formatos: .docx, .pdf, .pptx .xlsx. Los archivos PDF deben tener 300 páginas o menos. Para traducir más documentos o documentos más grandes, [obtenga información sobre la API de traducción en la nube](#)¹.

Importante: La traducción de documentos no está disponible en pantallas más pequeñas o móviles (teléfonos celulares). Puede encontrar texto en imágenes y escanear .pdf páginas en el documento de salida, pero no se traducen.

1. En tu navegador, ve a [Google Translate](#)².
2. En la parte superior, haga clic en **Documentos**.
3. Elija los idiomas a los que desea traducir y desde.
4. Para establecer automáticamente el idioma original de un documento, haga clic en **Detectar idioma**.
5. Haga clic en el botón azul **Examinar el equipo**.
6. Seleccione el archivo que desea traducir.
7. Haga clic en **Traducir** y espere a que el documento termine de traducirse.
8. Haga clic en **Descargar traducción** para descargar el documento traducido.
9. Obtén más información en [Traducir documentos y sitios web - Ordenador - Ayuda de Google Translate](#)³.

Traducir documentos con Microsoft Translator

1. Abra el documento en Word.
2. Seleccione **Revisar** > **idioma** > **Traducir** > **traducir documento**.
3. Seleccione un idioma para realizar la traducción.
4. Seleccione **Traducir**. Se abrirá una copia del documento traducido en una ventana separada.
5. Seleccione **Aceptar** en la ventana original para cerrar el traductor.
6. Obtenga más información en [Microsoft Translator para uso personal - Microsoft Translator](#)⁴.

TCEQ AIR QUALITY PERMIT NUMBERS 167047, GHGPSDTX212, and PSDTX1602

APPLICATION BY	§	BEFORE THE
BM DORCHESTER LLC	§	TEXAS COMMISSION ON
PORTLAND CEMENT PLANT	§	ENVIRONMENTAL QUALITY
DORCHESTER, GRAYSON COUNTY	§	

EXECUTIVE DIRECTOR'S RESPONSE TO PUBLIC COMMENT

The Executive Director of the Texas Commission on Environmental Quality (the commission or TCEQ) files this Response to Public Comment (Response) on the New Source Review Authorization application and Executive Director's preliminary decision.

As required by Title 30 Texas Administrative Code (TAC) § 55.156, before an application is approved, the Executive Director prepares a response to all timely, relevant and material, or significant comments. The Office of Chief Clerk received timely comments from the following persons: Senator Drew Springer, Representative Reggie Smith, Karla McDonald (Mayor of Howe), Clint Catching and Kevin Wilson (on behalf of the Howe Independent School District Board of Trustees), David Smith (Mayor of Dorchester, on behalf of the City Council of the City of Dorchester), Adam Cernero Meghan Cone, and Brad Morgan (on behalf of the Sherman Independent School District [ISD] Board of Trustees), Duncan C. Norton (on behalf of Grayson County, the Cities of Sherman and Dorchester, and the Sherman Economic Development Corporation "SEDCO"), Jim Schermbeck (on behalf of Downwinders at Risk), Cynthia J. Kaleri (on behalf of the Environmental Protection Agency [EPA] Region 6), Group A (*See Appendix A*), Group B (*See Appendix A*), and individual commentors (*See Appendix B*). This Response addresses all timely public comments received, whether or not withdrawn. If you need more information about this permit application or the permitting process, please call the TCEQ Public Education Program at 1-800-687-4040. General information about the TCEQ can be found at our website at www.tceq.texas.gov.

BACKGROUND

Description of Facility

BM Dorchester LLC (Applicant) has applied to the TCEQ for a New Source Review Authorization under Texas Clean Air Act (TCAA) § 382.0518. This will authorize the construction of a new facility that may emit air contaminants.

This permit will authorize the Applicant to construct a Portland Cement Plant. The plant is to be located following the following driving directions: from the intersection of Highway 289 and Highway 902 east of Dorchester head east on Highway 902 for approximately 0.80 miles - the site will be located directly north of Highway 902 after the intersection of Taylor Road, Dorchester, Grayson County, Texas 75459. Contaminants authorized under this permit include carbon monoxide, hazardous air pollutants, sulfuric acid, nitrogen oxides, organic compounds, particulate matter including particulate matter with diameters of 10 microns or less and 2.5 microns or less, greenhouse gases, lead, and sulfur dioxide. The proposed facility will also emit greenhouse gases.

Procedural Background

Before work is begun on the construction of a new facility that may emit air contaminants, the person planning the construction must obtain a permit from the commission. This permit application is for an initial issuance of Air Quality Permit Number 167047, GHGPSDTX212, and PSDTX1602.

The permit application was received on November 8, 2021, and declared administratively complete on November 18, 2021. The Notice of Receipt and Intent to Obtain an Air Quality Permit (NORI, first public notice) for this permit application was published in English on December 19, 2021, in the *Herald Democrat*. The Notice of Application and Preliminary Decision for an Air Quality Permit (NAPD, second public notice) was published on February 22, 2024, in English in the *Herald Democrat*. A Consolidated Notice of Receipt of Application and Intent to Obtain Permit and Notice of Application and Preliminary Decision (Consolidated NORI and NAPD, third public notice) was published in English on July 9, 2024, in the *Herald Democrat* and in Spanish on July 9, 2024, in *La Prensa*. A public meeting was held on March 25, 2024, at 7:00 PM at the Hilton Garden Inn Denison/Sherman/At Texoma Event Center, 5015 South U.S. 75, Denison, Texas 75020. The notice of public meeting was mailed on February 9, 2024, and an amended notice of public meeting was mailed on February 13, 2024. The public comment period ended on August 8, 2024. Because this application was received after September 1, 2015, it is subject to the procedural requirements of and rules implementing Senate Bill 709 (84th Legislature, 2015).

COMMENTS AND RESPONSES

COMMENT 1: Health Effects / Air Quality / Cumulative and Additive Effects

Commenters expressed concern about the effect of the emissions from the proposed project on the air quality and health of people, particularly sensitive populations such as the elderly, children, and people with existing medical conditions. Commenters stated that they or members of their family have preexisting health conditions that would make them more susceptible to adverse health effects from the plant's emissions. Commenters are concerned that the emissions proposed to be authorized may cause or exacerbate health conditions, including but not limited to allergies, rheumatoid arthritis, psoriatic arthritis, asthma, heart attacks, autism, cancer, heart conditions, Chronic Obstructive Pulmonary Disease (COPD), organ damage, diabetes, lung disease, autoimmune diseases, pulmonary embolisms, emphysema, pulmonary fibrosis, cystic fibrosis, respiratory illnesses, reproductive issues, skin and eye issues, black lung, osteoarthritis, high blood pressure, respiratory problems, ear problems, Post Traumatic Stress Disorder (PTSD), sarcoidosis, silicosis, sinusitis, strokes, tachycardia, thyroid issues, and vitiligo. Commenters are concerned that children will be exposed to contaminants during outdoor activities or that they will not be able to go outside. Commenters expressed concern regarding emissions of crystalline silica, heavy metals, and toxic chemicals such as dioxins, furans, mercury, polychlorinated biphenyls (BCP's), benzopyrene (BAP), and polyaromatic hydrocarbons (PAH's). Commenters expressed concern that the project would cause odor nuisances. Commenters expressed concern the proposed facility will contribute to ozone, global warming, and climate change. Commenters are concerned that the Applicant is trying

to obtain a permit before the new EPA standards are passed. Jim Schermbeck expressed concern that air quality standards are outdated. Rex Glendenning expressed concern regarding radioactive emissions. Deirdre Diamond expressed concern regarding cumulative effects, asking that the impact analysis take into consideration emissions from existing Concrete Batch Plants in the area as well as applications that are still in the permitting process. Ronald Vanbuskirk expressed concern that the proposed project would cause smelt and smog-filled air. Duncan C. Norton expressed concern that the site will not comply with the National Ambient Air Quality Standards (NAAQS) or the National Emission Standards for Hazardous Air Pollutants (NESHAP). Jeremy Devore expressed concern that the permit would cause nonattainment status. Michael Fannin wants to know the carbon footprint of the proposed plant.

EPA Consideration

Cynthia J. Kaleri expressed appreciation for TCEQ's consideration of the EPA's early concerns regarding the representativeness of the monitored background concentrations and the emissions estimates utilized in the ozone MERPs analysis and strongly encourages the TCEQ to thoroughly review and notify the EPA of any such proposal to relax the most recent proposed emission representations or averaging periods associated with limit compliance.

RESPONSE 1: The Executive Director is required to review permit applications to ensure they will be protective of human health and the environment. For this type of air permit application, potential impacts to human health and welfare or the environment are determined by comparing the Applicant's proposed air emissions to appropriate state and federal standards and guidelines. These standards and guidelines include the NAAQS, TCEQ Effects Screening Levels (ESLs), and TCEQ rules. As described in detail below, the Executive Director determined that the emissions authorized by this permit are protective of both human health and welfare and the environment.

NAAQS

The U.S. Environmental Protection Agency (EPA) created and continues to evaluate the NAAQS, which include both primary and secondary standards, for pollutants considered harmful to public health and the environment.¹ Primary standards protect public health, including sensitive members of the population such as children, the elderly, and those individuals with preexisting health conditions. Secondary NAAQS protect public welfare and the environment, including animals, crops, vegetation, visibility, and buildings, from any known or anticipated adverse effects from air contaminants. The EPA has set NAAQS for criteria pollutants, which include carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO₂), ozone (O₃), sulfur dioxide (SO₂), particulate matter less than or equal to 10 microns in aerodynamic diameter (PM₁₀), and PM less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}).

¹ 40 CFR 50.2

The likelihood of whether adverse health effects caused by emissions from the facility could occur in members of the general public, including sensitive subgroups such as children, the elderly, or people with existing respiratory conditions or other preexisting conditions, was determined by comparing the facility's maximum predicted air dispersion modeling concentrations to the relevant state and federal standards and ESLs. TCEQ staff used modeling results to verify that predicted ground-level concentrations from the proposed facility are not likely to adversely impact public health and welfare. The overall evaluation process provides a conservative prediction that is protective of public health. The modeling predictions were reviewed by the TCEQ Air Dispersion Modeling Team, and the modeling analysis was determined to be acceptable. The Applicant used the American Meteorological Society (AMS)/EPA Regulatory Model (AERMOD) modeling system to provide a reasonable worst-case representation of potential impacts from the proposed emissions on the area surrounding the facility. *See* Response 2 for additional information concerning the modeling and Response 12 concerning emissions calculations.

The Applicant conducted a NAAQS analysis for NO₂, CO, SO₂, PM₁₀, PM_{2.5}, Pb, and O₃. The first step of the NAAQS analysis is to compare the proposed modeled emissions against the established de minimis level. Predicted concentrations (GLC_{max}²) below the de minimis level are considered to be so low that they do not require further NAAQS analysis. Table 1 contains the results of the de minimis analysis.

Table 1. Modeling Results for PSD De Minimis Analysis in Micrograms per Cubic Meter (µg/m³)

Pollutant	Averaging Time	GLC _{max} (µg/m ³)	De Minimis (µg/m ³)
NO ₂	1-hr	19	7.5
NO ₂	Annual	0.4	1
CO	1-hr	769	2000
CO	8-hr	276	500
PM ₁₀	24-hr	10	5
PM ₁₀	Annual	3	1
PM _{2.5} (NAAQS)	24-hr	7.2	1.2
PM _{2.5} (NAAQS)	Annual	1.3	0.13
PM _{2.5} (Increment)	24-hr	8.7	1.2
PM _{2.5} (Increment)	Annual	1.4	0.13
SO ₂	1-hr	12	7.8
SO ₂	3-hr	12	25
SO ₂	24-hr	4.5	5
SO ₂	Annual	0.3	1

The pollutants below the de minimis level should not cause or contribute to a violation of the NAAQS and are protective of human health and the environment.

² The GLC_{max} is the maximum ground level concentration predicted by the modeling.

The Applicant conducted a full NAAQS analysis (PSD NAAQS and Minor NSR NAAQS) for those pollutants above de minimis to account for cumulative effects by including an evaluation of all on-property sources, applicable off-property sources, and representative monitored background concentrations. The de minimis analysis modeling results indicate 1-hr SO₂, 24-hr and annual PM₁₀, 24-hr and annual PM_{2.5}, and 1-hr NO₂ exceed the respective de minimis concentration and require a full impacts analysis. Results of the NAAQS analysis are presented below in Table 2 and Table 3 below.

The total concentration was determined by adding the GLC_{max} to the appropriate background concentration. Background concentrations are obtained from ambient air monitors across the state and are added to the modeled concentration (both on-property and off-property sources) to account for sources not explicitly modeled. The ambient air monitors were selected to ensure that they are representative of the proposed site. The total concentration was then compared to the NAAQS to ensure that the concentration is below the standard. For any subsequent projects submitted pertaining to this or any other facility in the area, the air quality analysis for that project will have to include the emissions authorized by this project, as well as other applicable off-property sources, if a full impacts analysis is required.

Table 2. Total Concentrations for PSD NAAQS (Concentrations > De Minimis)

Pollutant	Averaging Time	GLC _{max} (µg/m ³)	Background (µg/m ³)	Total Conc. = [Background + GLC _{max}] (µg/m ³)	Standard (µg/m ³)
SO ₂	1-hr	11	16	27	196
PM ₁₀	24-hr	10	82	92	150
PM _{2.5}	24-hr	6	20	26	35
PM _{2.5}	Annual	1.3	7.5	8.8	9
NO ₂	1-hr	87	See discussion*	87	188

* A background concentration for NO₂ was obtained from the EPA AIRS monitor 481210034 located at Denton Airport South, Denton, Denton County. The Applicant determined the 98th percentile of the annual distribution of the maximum 1-hr concentrations for each hour of the day (using data from 2020-2022), consistent with EPA guidance. These background values were then used in the model (as hourly background scalars) to be combined with model predictions, giving a total predicted concentration. The use of the monitor was determined to be reasonable based on the applicant's review of land use, county population, county emissions, and a quantitative review of emissions surrounding the area of the monitor site relative to the project site.

Table 3. Total Concentrations for Minor NSR NAAQS (Concentrations > De Minimis)

Pollutant	Averaging Time	GLC _{max} (µg/m ³)	Background (µg/m ³)	Total Conc. = [Background + GLC _{max}] (µg/m ³)	Standard (µg/m ³)
Pb	3-mo	0.0001	0.02	0.0201	0.15

The NAAQS analysis results are below the standard for each pollutant, should not cause or contribute to violation of the NAAQS, and are protective of human health and the environment.

Air Quality Monitoring

The de minimis analysis modeling results indicate that 24-hr PM₁₀ exceeds the respective monitoring significance level and requires the gathering of ambient monitoring information. Additionally, the de minimis analysis modeling results indicate that 24-hr SO₂, annual NO₂, and 8-hr CO are below their respective monitoring significance level, as Shown in Table 4 below.

Table 4. Modeling Results for PSD Monitoring Significance Levels			
Pollutant	Averaging Time	GLC_{max} (µg/m³)	Significance (µg/m³)
SO ₂	24-hr	4.5	13
PM ₁₀	24-hr	10.1	10
NO ₂	Annual	0.4	14
CO	8-hr	276	575

The GLC_{max} for all pollutants and averaging times represent the maximum predicted concentrations over five years of meteorological data.

The updated NO_x emission rates for the kiln (EPN 21-SK-230) are less than the representations made in the original modeling demonstration. The applicant did not update the NO₂ modeling for this demonstration. The annual NO₂ result reported above in Table 3 is conservative.

The applicant evaluated ambient PM₁₀ and PM_{2.5} monitoring data to satisfy the requirements for the pre-application air quality analysis. A background concentration for PM₁₀ was obtained from the EPA AIRS monitor 481130050 located at 717 South Akard St. Dallas, Dallas County. The high, second high monitored concentration from 2020-2022 was used for the 24-hr value (82 µg/m³). The use of the monitor is reasonable based on the applicant's review of land use, county population, county emissions, and a quantitative review of emissions surrounding the area of the monitor site relative to the project site. The background concentration was also used in the NAAQS analysis.

Background concentrations for PM_{2.5} were obtained from the EPA AIRS monitor 481210034 located at Denton Airport South, Denton, Denton County. The applicant calculated the three-year average (2020-2022) of the 98th percentile of the annual distribution of the 24-hr concentrations for the 24-hr value (20 µg/m³). The applicant used a three-year average (2020-2022) of the annual concentrations for the annual value (7.5 µg/m³). The use of the monitor is reasonable based on the applicant's review of land use, county population, county emissions, and a quantitative review of emissions surrounding the area of the monitor site relative to the project site. The background concentrations were also used in the NAAQS analysis.

Since the project has a net emissions increase of 100 tpy or more of VOC or NO_x, the applicant evaluated ambient O₃ monitoring data to satisfy the requirements for the pre-application air quality analysis. The applicant identified the Pilot Point ozone monitor (EPA AQS 481211032) as a conservative monitor for the proposed project site location. The applicant further noted how the Pilot Point monitor is located within the Dallas-Fort Worth (DFW) ozone non-attainment area and summarized the 2020-2022 ozone design value for the monitor without further refinement. The Air Dispersion Modeling Team (ADMT) has reviewed the ozone monitoring data for further refinement and this review is discussed below.

Initially, during the modeling protocol development, the applicant had proposed using the Greenville ozone monitor (EPA AQS 482311006) for the proposed project site location. The ADMT had commented that the proposed project site location is likely to be located downwind of the DFW ozone non-attainment area more often than the selected Greenville monitor, based on wind data, and it is likely that the Greenville monitor would not be representative of the proposed project site location for all wind directions and should not be exclusively used in the pre-application analysis.

The ADMT reviewed monitoring data from two additional ozone monitors to identify ozone concentrations during times when the proposed project site location could have been located downwind of the DFW ozone non-attainment area – the above-mentioned Pilot Point monitor and the Frisco monitor (EPA AQS 480850005). Collectively, the information from these two monitors, along with the Greenville monitor, gives a complete analysis for the proposed project site location.

The Pilot Point ozone monitor is located to the southwest of the proposed project site location. A sector was defined with an origin at the Pilot Point monitor and that covered the extent of the modeled receptor grid surrounding the proposed project site location. The sector was then used to identify wind directions favorable for transport towards the proposed project site location (220–265 degrees). Ozone data were reviewed during these wind directions for years 2020-2022 and the highest fourth highest daily maximum hourly value from all three years was 64 ppb. This would be a conservative metric for the ozone design value; the ozone design value is based on a three-year average of the fourth highest daily maximum rolling 8-hr average.

The Frisco ozone monitor is located to the south-southwest of the proposed project site location. Similar to the Pilot Point ozone monitor described above, a sector was defined with an origin at the Frisco monitor and that covered the extent of the modeled receptor grid surrounding the proposed project site location. The sector was then used to identify wind directions favorable for transport towards the proposed project site location (178–215 degrees). Ozone data were reviewed during these wind directions for years 2020-2022 and the highest fourth highest daily maximum rolling 8-hr average value from all three years was 69 ppb. This would be a conservative metric for the ozone design value; the ozone design value is based on a three-year average of the fourth highest daily maximum rolling 8-hr average.

The Greenville ozone monitor has an ozone design value of 63 ppb for the years 2020-2022.

PSD Increment Analysis

The PSD program limits the extent to which air quality may be allowed to deteriorate in areas where pollutant concentrations are below the NAAQS (attainment areas). Increases in pollutant concentrations over the background are limited to certain increments, which are values specified by EPA at 40 CFR § 52.21(c). When the de minimis analysis modeling indicates that a criteria pollutant exceeds its respective de minimis concentration, a PSD increment analysis is necessary for those criteria pollutants for which EPA has established an increment. The de minimis analysis modeling results indicate that 24-hour and annual PM₁₀ and 24-hour and annual PM_{2.5} exceed the respective de minimis concentrations and require a PSD increment analysis. The results of the PSD Increment Analysis are shown in Table 5 below.

Table 5. Results for PSD Increment Analysis

Pollutant	Averaging Time	GLC _{max} (µg/m ³)	Increment (µg/m ³)
PM ₁₀	24-hr	29	30
PM ₁₀	Annual	3	17
PM _{2.5}	24-hr	8.7	9
PM _{2.5}	Annual	1.4	4

Ozone Analysis

The Applicant performed an O₃ analysis as part of the PSD Air Quality Analysis (AQA). The Applicant evaluated project emissions of O₃ precursor emissions (NO_x and VOC) based on a Tier 1 demonstration approach consistent with the EPA's Guideline on Air Quality Models (GAQM). Specifically, the applicant used a Tier 1 demonstration tool developed by the EPA referred to as Modeled Emission Rates for Precursors (MERPs). Using data associated with the worst-case source for NO_x and VOC, the applicant estimated an 8-hr O₃ concentration of 0.99718 ppb. When the estimates of ozone concentrations from the project emissions are added together, the results are less than the de minimis level, as shown in Table 6 below.

Table 6. Modeling Results for Ozone PSD De Minimis Analysis in Parts per Billion (ppb)

Pollutant	Averaging Time	GLC _{max} (ppb)	De Minimis (ppb)
O ₃	8-hr	0.997	1

Additional Impact Analysis

The Applicant performed an Additional Impacts Analysis as part of the PSD AQA. The applicant conducted a growth analysis and determined that population will not significantly increase as a result of the proposed project. The applicant conducted a soils and vegetation analysis and determined that all evaluated criteria pollutant concentrations are below their respective secondary NAAQS. The applicant meets the Class II visibility analysis requirement by complying with the opacity requirements of 30 TAC Chapter 111. The Additional Impacts Analyses are reasonable and possible adverse impacts from this project are not expected.

The ADMT evaluated predicted concentrations from the proposed project to determine if emissions could adversely affect a Class I area. The nearest Class I area, Wichita Mountains Wilderness, is located approximately 225 kilometers (km) from the proposed site.

The H₂SO₄ 24-hr maximum predicted concentration of 7 µg/m³ occurred approximately 243 meters from the property line towards the west. The H₂SO₄ 24-hr maximum predicted concentration occurring at the edge of the receptor grid, 10.6 km from the proposed sources, in the direction of the Wichita Mountains Wilderness Class I area, is 0.526 µg/m³. The Wichita Mountains Wilderness Class I area is an additional 214.4 km from the edge of the receptor grid. Therefore, emissions of H₂SO₄ from the proposed project are not expected to adversely affect the Wichita Mountains Wilderness Class I area.

The predicted concentrations of PM₁₀, PM_{2.5}, NO₂, and SO₂ for all averaging times, are all less than de minimis levels at a distance of 7.3 km from the proposed sources in the direction of the Wichita Mountains Wilderness Class I area. The Wichita Mountains Wilderness Class I area is an additional 217.7 km from the location where the predicted concentrations of PM₁₀, PM_{2.5}, NO₂, and SO₂ for all averaging times are less than de minimis. Therefore, emissions from the proposed project are not expected to adversely affect the Wichita Mountains Wilderness Class I area.

Effects Screening Levels (ESLs) – Health Effects Analysis

To evaluate potential impacts of non-criteria pollutants, a health effects analysis was performed. ESLs are specific guideline concentrations used in TCEQ's evaluation of certain non-criteria pollutants. These guidelines are derived by the TCEQ's Toxicology Division and are based on a pollutant's potential to cause adverse health effects, odor nuisances, and effects on vegetation. Health-based ESLs are set below levels reported to produce adverse health effects, and are set to protect the general public, including sensitive subgroups such as children, the elderly, or people with existing respiratory conditions. The TCEQ's Toxicology Division specifically considers the possibility of cumulative and aggregate exposure when developing the ESL values that are used in air permitting, creating an additional margin of safety that accounts for potential cumulative and aggregate impacts. Adverse health or welfare effects are not expected to occur if the air concentration of a pollutant is below its respective ESL. If an air concentration of a pollutant is above the screening level, it is not necessarily indicative that an adverse effect will occur, but rather that further evaluation is warranted.

The health effects analysis is performed using the TCEQ guidance Air Permit Reviewer Reference Guide – APDG 5874 - Modeling and Effects Review Applicability (MERA) process.³ The MERA is a step-by-step process to evaluate the potential impacts of non-criteria pollutants which are evaluated against the ESL for each chemical species. The initial steps are simple and conservative, and as the review progresses through the process, the steps require more detail and result in a more refined analysis. If the contaminant meets the criteria of a step, the review of human health and welfare effects for that

³ See APDG 5874 guidance document.

chemical species is complete and is said to “fall out” of the MERA process at that step because it is protective of human health and welfare. Any non-criteria pollutants proposed to be authorized which were below their respective ESLs are considered to have satisfied the MERA criteria and would not be expected to cause adverse health effects. As described above, if an air concentration of a pollutant is above the ESL, it is not indicative of an adverse effect but rather that further evaluation is warranted.

The potential for odor nuisance is reviewed through the use of ESLs. All pollutants, except for those identified in Table 7 below satisfy the MERA criteria and therefore are not expected to cause adverse health effects. The pollutants identified in Table 7 did not meet the criteria of the MERA guidance document and required further analysis.

Table 7. Minor NSR Site-wide Modeling Results for Health Effects

Pollutant	CAS#	Averaging Time	GLC_{max} (µg/m³)	GLC_{max} Location	ESL (µg/m³)
ammonia	7664-14-7	1-hr	17	Eastern Property Line	180
hydrogen chloride	7647-01-0	1-hr	0.3	--	190
hydrogen chloride	7647-01-0	Annual	0.01	--	7.9
mercury	7439-97-6	1-hr	0.0004	--	0.25
portland cement	65997-15-1	1-hr	53	Southern Property Line	50
portland cement	65997-15-1	Annual	1	15m N	5
silica, crystalline (quartz)	14808-60-7	1-hr	2	Northern Property Line	14
silica, crystalline (quartz)	14808-60-7	Annual	0.07	Southern Property Line	0.27

Site-wide modeling was performed and demonstrated that all predicted concentrations except for 1-hour portland cement will not exceed the ESL. The TCEQ Toxicology Division conducted an analysis for 1-hour portland cement, which was the only pollutant with a predicted concentration above its ESL. The TCEQ Toxicology Division evaluated potential exposures and assessed human health risks to the public. Modeling predicts that the short-term GLC_{max}/ni for routine emissions of Portland cement will exceed its short-term ESL of 50 µg/m³ by 1.1 times, with a predicted corresponding frequency of one-times ESL exceedance at the GLC_{max}/ni of 1 hour per year. However, the modeled long-term GLC_{max}/ni for Portland cement was far below its annual ESL of 5 µg/m³. Therefore, considering the magnitude and frequencies of the short-term ESL exceedances at the GLC_{max}/ni, the conservative nature of the modeling assumptions using worst-case scenarios and meteorological conditions, public exposure is unlikely at this site, and the fact that the long-term ESL was never exceeded at any receptors, the predicted short- and long-term emissions of portland cement are allowable. In conclusion, based on the modeled representations presented, the Toxicology Division determined no short- or long-term adverse health effects are expected to occur among the general public as a result of exposure to the proposed emissions from this facility.

Therefore, the Toxicology Division determined that the described impacts are acceptable given the conservative nature of both the ESLs and the emissions estimates. Additionally, these original estimates were rendered irrelevant by the revisions later submitted by the applicant, because the dust collector efficiency was doubled, providing filters which are twice as effective in terms of efficiency. This more than halved the emissions from the dust collectors (all sources which handle cement exhaust through dust collectors/baghouse). This would have also halved the concentrations in the model (since concentrations and emission rates are directly related), putting the 1-hour well below the ESL. However, the applicant did not elect to re-evaluate the ESL modeling, leaving the more conservative estimates.

Heavy Metals, Dioxins and Furans, and Organic Hazardous Air Pollutants (HAPS)

The heavy metals, mercury or lead could potentially be present in trace amounts in limestone, clays, sands, bauxite, or iron ore used in clinker production. Mercury and lead from cement kilns are specifically regulated by the EPA due to their potential presence, toxicity, and ability to be quantified. Both of these metals were modeled against ESLs and NAAQS, respectively. Other potentially present heavy metals are not expected to be in sufficient concentrations to merit further analysis or regulation. Additionally, mercury has an extremely low effects screening level and is expected to be the most frequently occurring heavy metal in cement. As an example, the short-term ESL for chromium is $3.6 \mu\text{g}/\text{m}^3$. The ESL for cadmium is $5.4 \mu\text{g}/\text{m}^3$. The short-term ESL for mercury is $0.25 \mu\text{g}/\text{m}^3$. Therefore, for cement kilns, demonstrating that emissions of mercury (which are expected in higher amounts) are within health effects guidelines effectively serves as a demonstration that other metals would be expected to not contribute to adverse health effects. Similarly, lead is specifically regulated in terms of allowable emissions from cement kilns and additionally was modeled against its NAAQS standard (results are above). Higher concentrations of heavy metals are typically associated with kilns which burn hazardous waste. The draft permit does not allow the burning of hazardous waste as a fuel at this proposed facility.⁴ Additionally, the Applicant modeled against the portland cement ESL. This ESL was developed to account for all compounds which could be found in cement and provide a path for a single modeling demonstration which accounts for all species which could be present in the mixture. Portland cement had a predicted 1-hour exceedance of the ESL of $53 \mu\text{g}/\text{m}^3$ compared to a 1-hour ESL of $50 \mu\text{g}/\text{m}^3$. These emissions were therefore reviewed by the Toxicology Division. The Toxicology Division does not anticipate any short- or long-term adverse health effects to occur among the general public as a result of exposure to the proposed emissions from this facility. This demonstration was also performed prior to the Applicant accepting a more stringent requirement on baghouse control levels. These requirements effectively halved emissions from most sources of portland cement dust. This would have resulted in a predicted concentration below the ESL; however, the Applicant left the demonstration at the more conservative number and did not perform a subsequent demonstration at the new lower emission rate. Therefore, this analysis was extremely conservative.

⁴ See EPA Report to Congress on Cement Kiln Dust, December 31, 1993, available at <https://archive.epa.gov/epawaste/nonhaz/industrial/special/web/pdf/chap-3.pdf>.

Dioxins and furans are terms for a wide range of compounds. Specifically, for the cement industry EPA defines these as tetra-, penta-, hexa-, hepta-, and octa-chlorinated dibenzo dioxins and furans. Additionally, organic hazardous air pollutants (HAPS) can occur due to organics which can occur in some limestone formations. These are defined by the EPA as, "...the sum of the concentrations of compounds of formaldehyde, benzene, toluene, styrene, m-xylene, p-xylene, o-xylene, acetaldehyde, and naphthalene...".⁵ The TCEQ does not typically request speciated modeling of these general categories of pollutants, rather it relies upon regulation of stack emission limits for the categories found in 40 CFR 63 (NESHAP) Subpart LLL. The draft permit reflects this rule in requirements for stack concentrations of both categories of pollutants. The EPA states in its Final Rule: Portland Cement Manufacturing Residual Risk and Technology Review Fact Sheet (https://www.epa.gov/sites/default/files/2018-07/documents/pc_neshap_rtr_final_rule_fact_sheet.pdf): "After conducting a risk analysis of facility emissions under the fully implemented MACT standards, EPA found no appreciable health or ecological risks due to air toxics emissions and, thus, risks are acceptable." The same document states that, "MACT standards protect public health with an ample margin of safety, and protect against adverse environmental effects." Therefore, compliance with 40 CFR 63 (NESHAP) Subpart LLL rules relating to compounds such as dioxins and furans and organic HAPS (as well as other hydrocarbons as regulated with the VOC limit) is expected to result in protectiveness. The Applicant performed all demonstrations required by EPA NAAQS standards and TCEQ permitting practices for cement kilns.

State Property Line Analysis (30 TAC Chapter 112)

Because this application has sulfur emissions, the Applicant conducted a state property line analysis to demonstrate compliance with TCEQ rules for net ground-level concentrations for sulfur dioxide (SO₂), hydrogen sulfide (H₂S), and sulfuric acid (H₂SO₄), as applicable. This analysis demonstrated that resulting air concentrations will not exceed the applicable state standard, as shown in Table 8 below.

Table 8. Site-wide Modeling Results for State Property Line

Pollutant	Averaging Time	GLC _{max} (µg/m ³)	Standard (µg/m ³)
SO ₂	1-hr	12	1021
H ₂ SO ₄	1-hr	22	50
H ₂ SO ₄	24-hr	7	15

The proposed emissions increases have been adequately represented and included in the impact analysis. Additionally, TCEQ staff and the ADMT have reviewed the proposed emissions from sources, represented source parameters and locations, point and area source representations, and background concentrations. Based on the data and representations, TCEQ staff and ADMT determined that the modeling analysis was acceptable.

⁵ 40 CFR 63.1341.

In summary, based on the Executive Director's staff review, it is not expected that existing health conditions will worsen, or that there will be adverse health effects on the general public, sensitive subgroups, or the public welfare and the environment as a result of proposed emission rates associated with this project. Please *see* Response 15 for additional information regarding BACT and Response 12 for additional information regarding emissions sources and calculations used to support the application.

Greenhouse Gases

EPA has stated that unlike the criteria pollutants for which EPA has historically issued PSD permits, there is no NAAQS or PSD increment for GHGs. The EPA Administrator has recognized that human-induced climate change has the potential to be far-reaching and multi-dimensional. See Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act, 75 Fed. Reg. 66496, 66497 (Dec. 15, 2009). Climate change modeling and evaluations of risks and impacts are typically conducted for changes in emissions that are orders of magnitude larger than the emissions from individual projects that might be analyzed in permit reviews. Quantifying the exact impacts attributable to a specific GHG source obtaining a permit in specific places and points would not be possible with current climate change modeling.⁶ Thus, EPA has concluded it would not be meaningful to evaluate impacts of GHG emissions on a local community in the context of a single permit.

The TCEQ has determined that an air quality analysis for GHG emissions would provide no meaningful data and has not required the Applicant to perform one. As stated in the preamble to the TCEQ's adoption of the GHG PSD program, the impacts review for individual air contaminants will continue to be addressed, as applicable, in the state's traditional minor and major NSR permits program per 30 TAC Chapter 116 and 30 Tex. Reg. 2629, 2904 (April 11, 2014).

Crystalline Silica Emissions

Crystalline silica was modeled by the applicant due to its potential presence in cement and its ingredients. All predicted concentrations were below their respective ESLs, as shown above.

Climate Change

EPA has stated that unlike the criteria pollutants for which EPA has historically issued PSD permits, there is NAAQS for Greenhouse Gases (GHGs), including no PSD increment. Climate change modeling and evaluations of risks and impacts are typically conducted for changes in emissions that are orders of magnitude larger than the emissions from individual projects that might be analyzed in permit reviews. Thus, EPA has concluded it would not be meaningful to evaluate impacts of GHG emissions on a local community in the context of a single permit. For these reasons, the TCEQ has determined that an air quality analysis for GHG emissions would provide no meaningful data and has not required the Applicant to perform one. Based on EPA policies, the TCEQ only regulates GHG emissions when they are associated with federal

⁶ See EPA PSD and Title V Permitting Guidance for GHGs, March 2011 at 48.

major source projects and permits which emit the associated pollutants. This permit does trigger federal major source review and therefore is required to quantify and evaluate GHG emissions, authorized under greenhouse gas permit no. GHGPSDTX212.

Emissions from the Quarry and Roads

The TCEQ's jurisdiction is established by the Legislature and is limited to the issues set forth in statute. Accordingly, the TCEQ does not have jurisdiction to enforce employee safety regulations promulgated by the Occupational Safety and Health Association (OSHA) or to consider employee health when determining whether to approve or deny an application for an air authorization. As stated in Response 25, the TCEQ does not have jurisdiction to regulate mines, quarries, or associated blasting. Mines and quarries are specifically excluded from the definition of facility in the TCAA § 382.003(6); therefore, modeling related to mining and quarry operations are outside the scope of review of this application.

The TCEQ does regulate nuisance dust. Accordingly, provisions for visible emissions at the property line, for using a street sweeper on plant roads, and for their paving, maintenance and cleaning were included in the draft permit.

EPA Consideration

No proposal was made during the review period to relax emissions, rather the Applicant gradually reduced emission proposals over the course of the review. No reduction was made to averaging periods. EPA provided comments throughout the review process. EPA was in the loop continuously throughout the NO_x reductions/modeling progress.

Summary

In summary, based on the Executive Director's staff review, it is not expected that existing health conditions will worsen, or that there will be adverse health effects on the general public, sensitive subgroups, or the public welfare and the environment as a result of proposed emission rates associated with this project.

COMMENT 2: Modeling Details

Adequacy of the PSD Modeling Protocol

Commenters expressed general concern regarding representations made in the modeling submittal and question whether the PSD modeling protocol was adequate.

Model Representations and Approaches

Commenters questioned the representations made in the modeling submittal, including the represented meteorological data, wind speeds, elevations, surface roughness, off-property sources, receptors, represented stack heights, background concentration representations, and monitor selection. Commenters question the accuracy of the modeling submittal if the information used was not obtained directly from the site. Commenters express concern that local wind data was not utilized,

referring to a local 'weather station' residents installed themselves, and further comment that the terrain classification is incorrect by not using the 'post-build out information'.

Monitoring Ambient Conditions

Duncan C. Norton expressed concern that the modeling did not properly account for ambient conditions.

Non-Regulated Sources in Model

Commenters request that the Applicant be required to represent mining and quarry operations, truck hauling emissions, and blasting emissions in their modeling submittal in addition to the representations of the cement plant itself.

PSD Increment

Commenters expressed concern that the modeling did not correctly calculate incremental PSD emissions.

Nearby Facilities and Nonattainment Status

Jeremy Devore questioned a list of facilities in proximity to the proposed plant as it relates to modeling and monitor selection, and further expressed concern that the permit would cause nonattainment status.

Modeling Protocol Cycles

David Smith questioned the completion date of the modeling protocol, asking for an explanation of either 'non-posting' or back dating the modeling protocol completion date.

Modeling of Lead and Mercury

Mr. Smith asks how far the modeling says mercury and lead emissions will be spread, and in what prevailing wind direction.

Changes to the Model and TCEQ Approval of Impacts

Deirdre Diamond expressed concern that the application was not originally approved due to the initial modeling submittal showing that there would be a significant deterioration in air quality, further asking what values were not within allowable limits and questioning what changed in the application to meet the new standards for the permit to later be approved.

Deficiency Responses

Ms. Diamond cited various deficiency items from the ADMT with regard to the Electronic Modeling Evaluation Workbook (EMEW) review and various modeling submittals, asking how and when each deficiency item was addressed, how each item was updated, how each item was reviewed and approved for accuracy, and asks how the applicant complied with all current modeling standards.

Accuracy of the Model

Ms. Diamond asks if the modeling reflects the most accurate depiction of the impact to the local environment.

Off-Property Sources

Ms. Diamond asks how TCEQ factored in outside and off property sources in the modeling submittal, asks what outside and off property sources were represented, and asks how a permit can be approved when the modeling results are just below the current standards. Ms. Diamond asks how the area is not considered as a nonattainment area when factoring in the cumulative and surrounding air quality from nearby concrete batch plants.

Receptor Grids

Ms. Diamond asks what receptor sites were identified during the modeling process, what the predicted values are, what numerical changes to air quality are for each pollutant analyzed and asks for the furthest distance of a receptor identified in the modeling.

(Nancy Brown, Kristin Chandler, Megan C. Chandler, Cassady A. Craddock, Linda Carol Crain, Bruce Dawsey, Jeremy Devore, Jeremy W. Devore, Deirdre Diamond, Judith S. Dryden, Harold C. Foster, Chloe Grooms, Joshua Grooms, Lisa Hejny, Lori Huntsman, Suzanna Dryden Jensen, Ken King, Rick Kvaal, Cindy Kvaal, William Landrum, Christopher A. Lopez, Jim Lucas, Trudy Lucas, Karla McDonald, Davida Miorin, Cindy Mitchell, Duncan C. Norton, Jeff Overstreet, Sherry Perrin, Kathy Raner, Justin Neal Raner, Russell Rutherford, Bradley J. Schnitker, Marci Schnitker, Peter Schulze, Betty Scott, David Smith, Wendy Smith, Sr Bobby Overbey Sr., Chandler Strawn, Sathappun Subbiah, Tonya Troxtell, Becky Vincent, Mark Vodry, Kimberly Vodry, Leonard G. Waldrum, Cynthia L. Weems)

RESPONSE 2: Grayson County is currently designated as being in attainment or unclassifiable for all pollutants. An impacts analysis was conducted for this project and demonstrates that the proposed facility will not cause or contribute to an exceedance of the NAAQS; therefore, the project is not expected to cause the county to be designated as nonattainment.

Adequacy of the PSD Modeling Protocol

A modeling protocol provides information and details on how the AQA will be conducted. The applicant provided a modeling protocol with the submittal of the air permit application. This modeling protocol was reviewed by the TCEQ's Air Dispersion Modeling Team (ADMT), and comments were sent to the applicant. The applicant made revisions to the modeling protocol to address ADMT comments, and this cycle repeated up to the submittal of the air quality analysis.

Model Representations and Approaches

For this air permit application, appropriate site-specific air dispersion modeling was performed. The applicant used the EPA-preferred AERMOD air dispersion modeling program to provide an estimate of the worst-case potential impacts on the area surrounding the proposed project site. The modeling procedures, methodology, predictions, and results were reviewed by ADMT, and the analysis was determined to be acceptable.

The purpose of the air dispersion modeling analysis for the New Source Review (NSR) preconstruction permitting program is to estimate reasonable worst-case pollutant concentrations using representative meteorological data, acceptable modeling techniques, and source data represented in the air permit application. The collection and use of on-site meteorological data is not a requirement when conducting air dispersion modeling in support of the NSR preconstruction permitting program. TCEQ and EPA guidance allow for the use of off-site meteorological data collected by a nearby National Weather Service (NWS) station when conducting air dispersion modeling provided that the NWS meteorological data are representative for the project site. An important component to meteorological data representativeness is whether or not the worst-case meteorological conditions have been sufficiently represented in the meteorological dataset. With five years of hourly NWS meteorological data used in the air dispersion modeling analysis, the worst-case meteorological conditions have been sufficiently represented in the dataset.

With respect to terrain used for the project site location, the applicant will be held to the representations made for the terrain elevations used for the proposed sources. And these could reflect project site preparation and/or grading work.

PSD Increment

Air dispersion modeling is not used to calculate incremental Prevention of Significant Deterioration (PSD) emissions. However, the PSD increment analysis conducted for this air permit application evaluated the proposed emissions and emissions from nearby off-property increment consuming sources. The results for the increment analysis demonstrate the proposed emissions would not cause or contribute to a PSD increment violation.

Nearby Facilities and Nonattainment Status

Jeremy Devore questioned a list of facilities in proximity to the proposed plant as it relates to modeling and monitor selection. Mr. Devore identified regulated entities (RNs) located within 10 kilometers (km) of the project site and noted that they were not included in the off-property inventory. The commentor also provided an excerpt from the modeling protocol (*Table 7-8. Emissions Inventory Data for PM_{2.5} Sources within 10 km of Site and Monitor*) and noted how the Panda Sherman Power station is the only company reported as being included. Below is a summary for each of the identified RNs located within 10 km of the project site:

- RNs 100671619, 100739929, 100858299, 100954346, 101469237, 103064853, 110823325, and 111213443 - emissions from these RNs were explicitly modeled in the air quality analysis.
- RNs 100217223, 110780335, and 111112314 - emissions from these RNs were accounted for in the AQA with ambient monitoring data.
- RN 100603737 - not permitted for SO₂, NO_x, PM₁₀, or PM_{2.5}.
- RNs 102863081, 106503014, and 111053344 - permits are no longer active and void.
- RNs 105672687 and 108772588 - no longer active RN numbers.

The excerpt provided from the modeling protocol is a listing of RNs located within 10 km of the project site and within 10 km of an ambient monitor, and their associated emissions data for PM_{2.5}. These emissions data are from the State of Texas Air Reporting System database and are reported by the RNs to TCEQ annually. Not all RNs are required to report emissions data (*see* Title 30 Texas Administrative Code § 101.10 for reporting requirements); therefore, this list is not meant to represent all RNs. These emissions data are used with other supporting information to justify the use of ambient monitoring data in the air quality analysis.

Also, regarding this excerpt, the commentor questioned the value of zero for PM_{2.5} for Atrium Companies. For the most recent emissions reporting year (2022), Atrium Companies only reported emissions for volatile organic compounds.

Monitoring Ambient Conditions

The purpose of the air dispersion modeling analysis for the NSR preconstruction permitting program is to estimate reasonable worst-case pollutant concentrations using representative meteorological data, acceptable modeling techniques, and source data represented in the air permit application. The collection and use of on-site meteorological data is not a requirement when conducting air dispersion modeling in support of the NSR preconstruction permitting program. TCEQ and EPA guidance allow for the use of off-site meteorological data collected by a nearby NWS station when conducting air dispersion modeling provided that the NWS meteorological data are representative for the project site. An important component to meteorological data representativeness is whether or not the worst-case meteorological conditions have been sufficiently represented in the meteorological dataset. With five years of hourly NWS meteorological data used in the air dispersion modeling analysis, the worst-case meteorological conditions have been sufficiently represented in the dataset.

Non-Regulated Sources in Model

TCEQ does not have regulatory jurisdiction over quarry operations or any associated blasting, roads, or trucks per THSC § 382.003(6). Accordingly, the TCEQ rules do not require an applicant to analyze emissions resulting from quarry operations, blasting, roads, or the use of trucks in an individual permit application. The draft permit forbids the use of blasting as a nuisance dust prevention measure, and the Applicant has represented that it will not be necessary for quarrying activities. No air dispersion modeling was requested or required specifically relating to the quarry, roads, or trucks. However, mobile sources are accounted for as part of the background concentration used as part of NAAQS analysis.

Modeling Protocol Cycles

Multiple modeling protocols were provided during the air permit application review process. The reviews conducted for the modeling protocols were completed on the following dates: December 8, 2021; May 19, 2022; August 23, 2022; and January 23, 2023. There was no modeling protocol cycle during the time between March 28, 2023 and March 31, 2023.

Modeling of Lead and Mercury

The maximum predicted concentration of mercury occurred approximately 2.5 km to the south-southeast of the project site property. For the lead model predictions, the maximum predicted concentration occurred along the northwestern project site property line. Maximum predicted concentrations of mercury and lead were less than the ESL and NAAQS, respectively, at all modeled locations.

The model does not explicitly determine how far the emissions will spread. Calculations performed by the model will be conducted for all receptors included in the modeling analysis, even at those receptors located at distances that are not reachable given the hourly transport data. The model used in the air quality analysis, AERMOD, is appropriate to use for transport distances over which steady-state assumptions occur, out to 50 km.

Changes to the Model and TCEQ Approval of Impacts

The air permit application underwent numerous deficiency cycles and revisions related to the proposed NO_x emissions. TCEQ worked closely with the EPA on modeling approaches and did not accept the applicant's originally proposed NO_x emission rates and resultant expected effects on air quality in the area of the proposed project. The applicant revised the air permit application and proposed NO_x limits which were roughly one third of the amount originally proposed. This was achieved through proposing and accepting a permit limit of 0.54 lbs of NO_x per ton of clinker. This limit is much more stringent than the 1.50 lbs of NO_x per ton of clinker which other cement kilns in the US are required to comply with. This will be achieved through the use of a selective catalytic reduction (SCR) technology (widely used in other industries since the 1950s, and in cement kilns in Europe since 2001) or a combination of SCR and Selective Non-Catalytic Reduction (SNCR) to reduce NO_x. This draft permit limit and the attendant reduction in emissions from the kiln resulted in ADMT approval of the

modeling analysis and its approach. Additionally, the Applicant later requested more stringent bagfilter requirements for most sources (which reduced PM emissions) and demonstrated compliance with the revised annual PM_{2.5} NAAQS standard.

Deficiency Responses

The AQA submitted by the applicant was reviewed by TCEQ's ADMT, and comments were sent to the applicant. The applicant provided responses and made updates to the AQA to address ADMT comments, and this cycle repeated up to the acceptance of the air quality analysis. The Applicant addressed all items identified by the TCEQ and ADMT staff, and responses to each item can be found in the permit file. See Response 10 regarding Application Representations and the Permit Review Process, and Response 9 regarding Access to Permit Documents.

The modeling procedures, methodology, predictions, and results were reviewed by ADMT, and the analysis was determined to be acceptable. The review process involves several parts. The first part of the process is to review the modeling methodology. Usually, the methodology is prescribed by established standard modeling procedures or practices. An example would be a NAAQS demonstration. First, the applicant models their net emissions increase to determine if a significant increase in any criteria pollutant's concentration in ambient air would be predicted. If the increase in concentration is not significant, then the demonstration would be complete. If the increase in concentration is significant, then a full NAAQS demonstration would follow. The prescribed methodology is to model all the sources at the site and all surrounding sources of the pollutant that could contribute to the area surrounding the site where the proposed increase is significant. A representative monitored background value would then be added to this result. The second part is to review the model inputs for consistency with the modeling report and the air permit application. The applicant is expected to represent all input data, e.g., source identifiers, elevations, locations, and exit parameters; building and structure locations, elevations, and dimensions; meteorological data for the proper period; and elevations of receptors where concentrations are calculated. ADMT checks all representations against what was actually modeled. The third part of the review is to determine whether the source characterizations are representative and/or appropriate. A vent or stack is easily represented as a point source; however, for other types of sources with emissions not originating from a vent or stack, the representation can vary. ADMT determines whether the source characterizations are representative or, if not, are represented in a conservative manner such that predicted concentrations should overestimate what ambient air concentrations would be.

Accuracy of the Model

The purpose of the air dispersion modeling analysis for the NSR preconstruction permitting program is to estimate reasonable worst-case pollutant concentrations using representative meteorological data, acceptable modeling techniques, and source data represented in the air permit application.

Off-Property Sources

For purposes of evaluating off-property sources, the applicant considered multiple items: explicitly modeling off-property sources, ambient monitoring data, project-level modeling results, and distances and magnitude of emissions. The off-property sources evaluated in the AQA are documented in the analysis provided by the applicant.

The AQA submitted by the applicant has been deemed acceptable, that is, the applicant has demonstrated the operation of the proposed facilities would not cause or contribute to a NAAQS or PSD increment violation, exceed a state property line standard, or adversely affect human health and welfare. As a result, the project is not expected to cause the county to be designated as nonattainment for any criteria pollutant.

Receptor Grids

The air dispersion modeling utilizes receptor grids for prediction of concentrations at specific points in the model. The applicant used receptor grids that began at the fence line and extended outward to determine model predictions in ambient air. Therefore, what the commenter referred to as "receptor sites" do not need to be identified. The ESL based analyses can utilize specific locations on the modeled grid to determine the nature of certain receptors, specifically whether they are industrial or non-industrial. In this case the area surrounding the proposed project site was considered non-industrial. The maximum predicted concentration at the fence line or beyond for each pollutant are reported above.

The modeled receptor grid extended from the fence line out to approximately 10 kilometers (km) for all pollutants and analyses except for the 1-hr NO₂ analysis. The 1-hr NO₂ analysis had a receptor grid that extended from the fence line out to approximately 25 km.

COMMENT 3: Dust / Nuisance / Winds

Commenters expressed concern about dust generated by the proposed project and that it may create nuisance dust conditions. Commenters expressed concern that the prevailing winds would carry dust and particulate matter to their homes, vehicles, and to the surrounding area. Jeffrey Brown expressed concern that the proposed emissions would contaminate nearby air handling systems. Jeffrey Overstreet asks if surrounding cities have been contacted with information about the average wind speed and direction that will push emissions into surrounding areas

David Smith expressed concern that PM which is fogged out of the air, dries, and becomes airborne again when the wind changes direction has not been considered in the application.

Kaleri, Ken King, Geri V. King, Laura L. King, Peggy Klas, Detra Klas, Anthony J. Kordosky, Rick Kvaal, Cindy Kvaal, William Landrum, Julie Lanicek, Jason R. Lankford, Jason Lankford, Patrick Latona, Mary Little, Christopher A. Lopez, Eric Lunde, Brian Mai, George Mason, Catherine Matuella, Dusty Wayne Mayer, William Mayer, Traci McCarthy, Traci McCarthy, Karla McDonald, Angela Moreau, Mary Morgan, Sharon Nelson, Paul Nixon, Margie Noel, Erica Northrup, Angie Onley, Bonita L. Overbey, Bobby N. Overbey, Jeff Overstreet, Jody Perry, Joshua D. Price, Lindsay Price, Delfina Prisock, Craig Rabe, Kathy Raner, Justin Neal Raner, Richard Reeves, Patsy A. Reeves, Joy Roberts, Mona Robnett, Brian Russell, Linda Russell, Shannon Ryan, Carrie Saindon, Joann Schnitker, Betty Scott, Derek Smith, David Smith, Drew Springer, Sara Sprinkle, James Stewart, Alice Stewart, Robert Stewart, Shirley Stewart, Chandler Strawn, Sathappun Subbiah, James Sutherland, Kenneth Svehlak, Sue Svehlak, Thomas Leland Taylor, Thomas L. Taylor, Julie Travis, Tonya Troxtell, Kristi Utley, Diana Vanbuskirk, Jenny Vonbehren, Jay Voto, Leonard G. Waldrum, Leonard G. Waldrum, Cameryn P. Warren, Manual Watson, Ronnie Whiteley, Rebecca Zey, Tracie Zweifel-Gibson, Gary Schnitker, Paula Neely, Robin Sears, Angela Onley, Borming Wang, Kenneth J. King)

RESPONSE 3: The primary activities that have the potential to emit particulate matter (i.e. dust) resulting from this project are the processing, storage, and handling of raw materials. All of the potential dust concentrations from the permitted sources have been evaluated based on operating parameters represented in the application and compared to the federal criteria mentioned above. The proposed permit contains the required control processes to minimize dust. When a company operates in compliance with the proposed permit there should be no deterioration of air quality or the generation of dust such that it impacts visibility. While nuisance conditions are not expected if the facility is operated in compliance with the terms of the permit, operators must also comply with 30 TAC § 101.4, which prohibits nuisance conditions.

Emission calculations are based on worse case emission scenarios for each facility. Air dispersion modeling is performed with worst case data which includes the effects of terrain, structures, wind, and temperature. Therefore, because a successful model demonstration shows that there should be no adverse effects from operations of the proposed plant under the worst-case conditions, normal operations will also have no expected adverse impacts.

COMMENT 4: Environmental Concerns

Commenters expressed concern about the effect of the proposed project on flora, fauna, and the surrounding environment. Commenters expressed concern about the potential impacts to nearby wildlife and plants, including but not limited to farmland, crops, pets, ranches, tree farms, livestock, cattle, horses, butterflies, bees, opossums, coyotes, bobcats, squirrels, geese, ducks, hawks, falcons, migratory birds, bald eagles, red bellied woodpeckers, and other endangered species. Commenters expressed concern regarding the impact on a nearby wildlife refuge. Jan Broomall expressed

concern for their miniature horse business, stating that their property is a certified wildlife habitat and bluebird sanctuary. Melissa Gail Croney expressed concern that wildlife in the area would be pushed out of their natural habitats and force them into the surrounding neighborhoods because of the project. Jeffery Overstreet asks how the proposed project will affect his cattle, specifically the quality of their meat and ability to reproduce, as well as asks how the project will affect hay quality and if it will impact the selling price. Mr. Overstreet also asks how the terrain will change due to the plant.

RESPONSE 4: The secondary NAAQS are those the EPA Administrator determines are necessary to protect public welfare and the environment, including animals, crops, vegetation, visibility, and structures, from any known or anticipated adverse effects associated with the presence of a contaminant in the ambient air. Because the emissions from this facility should not cause an exceedance of the NAAQS, air emissions from this facility are not expected to adversely impact land, livestock, wildlife, crops, or visibility, nor should emissions interfere with the use and enjoyment of surrounding land or water. Please see Response 1 for an evaluation of this project's impacts in relation to the NAAQS. In addition, 30 TAC § 101.4 prohibits the discharge of contaminants which may be injurious to, or adversely affect, animal life.

Compliance with rules and regulations regarding endangered species is handled at the state level by the Texas Parks and Wildlife Department and at the federal level by the United States Fish and Wildlife Service. It is incumbent upon an applicant to request and acquire any additional authorizations that may be required under state or federal law, and to follow all applicable state and federal rules and regulations. However, if operated in accordance with the requirements of the permit, adverse impacts from the proposed plant are not expected.

COMMENT 5: Additional Studies

Commenters requested that an environmental impact study (EIS) be conducted prior to authorization of this project. Commenters ask if the Applicant has produced a study of the local limestone, including an expulsion test showing what organic compounds and pollutants will be generated in daily operation.

(Tiffany Drake, Chloe Grooms, Joshua Grooms, Lisa Hejny, Scott Horner, Terri Langford, Jost Marr, Russel Rutherford, Mark Vodry, Kimberly Vodry)

RESPONSE 5: Environmental Assessments and Environmental Impact Statements (EIS) are a specific requirement for federal agencies under the National Environmental Policy Act (NEPA). An EIS is not required for state actions such as this permit. However, both the TCAA and the TCEQ rules provide for an extensive review of the application to ensure that emissions from the proposed facility will not violate the NAAQS and will not be expected to adversely affect human health or the environment. A health effects review was conducted for the proposed facilities during the permit review and the permit was found to be protective of human health and the environment.

COMMENT 6: Water / Hazardous Waste / Other Authorizations

Commenters expressed concern about the amount of water the plant would need for its operations, stating that the area already has low water availability and that the plant would exacerbate the water supply and water table. Several commenters expressed concern that the proposed plant will cause water contamination and negatively impact water sources in the area, including but not limited to creeks, the water table, public and private drinking water wells, the floodplain, groundwater, aquifers runoff, lakes, swimming holes, the watershed, and ponds. Commenters expressed concern regarding the proposed project as it relates to acid rain. Commenters request a written plan be submitted for the contamination of the Choctaw and Trinity watershed systems. Commenters are concerned that water was not considered as part of the PSD permit requirements. Commenters request investigations from Texas Parks and Wildlife (TPWD), EPA, and the Department of Homeland Defense regarding possible water contamination of the Trinity River and Choctaw Watershed. Commenters express concern that a hazardous waste permit has not been obtained. Jeff Overstreet asks how the Applicant will remove excessive water from their property, and asks how the plant will impact erosion, flooding, and swelling of creeks. Mr. Overstreet asks what will happen if the Applicant accidentally damages the aquifer and where residents will get water if that is the case.

Jody Perry asked about waste disposal and if there would be recycling. Manual Watson expressed concern that local wastewater systems will not be able to keep up. Jan Broomall expressed concern that the proposed project would generate toxic waste. Judy Searcy Dryden expressed concern regarding the flood plain, stormwater runoff, and potential acid rain runoff. Jost Marr expressed concern that the Applicant would build the plant without obtaining any other required permits.

(Group A, Silvia Adams, Randy Adams, Janice Akins, Luz Arce, Ralph H. Armstrong, Katrina Lynn Arsenault, Art Arthur, Andrea Paulette Aslam, Sesily Babekuhl, Willies Ballou, Willies Carl Ballou, Douglas Glenn Banner, Kelly Denise Barnes, Robert Bauer, Heather Beaver, Ashley Beck, Francis Beck, Blake C. Weems, Monique Whaley, Steve Whaley, Joseph White, Edward Whitfield, Jeff Whitmire, Krista Lucas Wynn, Rebecca Zey, Tracie Zweifel-Gibson, David G. Sileven, Dorothy Schmoker, Jennita Wingate, Kaaren J. Teuber, Lainie Ramsay, Nancy Jan Shaw, Robin Sears, Angela Onley, Borming Wang, Kenneth J. King, Elizabeth Rocamontes)

RESPONSE 6: Although the TCEQ is responsible for the environmental protection of air and water as well as the safe management of waste, this proposed permit will regulate the control and abatement of air emissions only. Therefore, issues regarding water quality or discharge and the handling of waste are not within the scope of this review. However, the Applicant may be required to apply for separate authorizations for water quality, water usage, or the handling of waste. This permit does not authorize the discharge of pollution into a body of water or the storage or handling of hazardous waste. Acid Rain requirements are addressed through the Federal Acid Rain Program. The requirement to obtain an Acid Rain Permit is independent of the requirement to obtain a NSR permit.

COMMENT 7: Public Notice

Commenters expressed general concern regarding the Public Notice publication and expressed concern that Public Notice requirements were not met. Multiple commenters expressed concern by the lack of response to comments submitted during the public comment period, asking the TCEQ to thoroughly address and answer concerns raised by community members. Multiple commentors state that they should be considered an affected person with the right to request a contested case hearing, not just those that live within a specific radius of the proposed project.

David Smith expressed concern that the Applicant did not fulfill the posting requirements and did not truly or fairly represent the date of notice, further expressing concern that the notice occurred around Christmas. Mr. Smith also stated the notice did not provide the public enough time to respond with comments, asks for a re-notice to be published, asks that the public have the maximum allowable time to respond with comments, and asks that the public be able to participate in any hearing.

(Ron R. Brockner, Jeremy W. Devore, Kenneth Griffin, William Landrum, Josh Marr, Karla McDonald, Brian Norris, Sherry Perrin, Cynthia Reyes, Betty Scott, David Smith, Bobby Overbey Sr., Chandler Strawn, Sathappun Subbiah, Manual Watson, Cynthia L. Weems)

Number of Comments

David Smith questioned the number of comments represented to have been submitted regarding this project, specifically asking why the counts reflected on the website (TCEQ Commissioner's Integrated Database [CID]) to view public comments have fluctuated each time he has tried to view them.

Sign Posting and Public Comment Period

David Smith questions the date TCEQ CID shows as first public notice having been completed, stating that the Applicant's posted signs were not posted in both English and Spanish during the entire comment period and therefore first public notice should not be considered complete.

Bilingual Notice and Public Participation / Environmental Justice

Commenters expressed concern that the Applicant misrepresented the nearby school district and applicability to bilingual notice requirements, further expressing concern bilingual notice requirements were not fulfilled because public notice was not published in Spanish. Kristopher Daniel Bravo commented that by failing to provide adequate bilingual communication, TCEQ is perpetuating systemic barriers that disproportionately affect Hispanic people and undermine their civil rights. Mr. Bravo further asked that the TCEQ prioritize bilingual outreach efforts to ensure that all residents have equal access to information and opportunities to participate in the decision-making process, regardless of language proficiency. Paul Daniel Lopez commented that the lack of bilingual outreach regarding the proposed project ignores the cultural and linguistic needs of the Hispanic community and potentially violates their civil rights. Jay Voto asks why they were not notified by mail about the public meeting.

(Willies Carl Ballou, Kristopher Daniel Bravo, Cassady A. Craddock, Jeremy Q. Devore, Jeremy Devore, Harold C. Foster, Austin Grooms, Joshua Grooms, Chloe Grooms, Lisa Hejny, Laura T. Hunt, Suzanna Dryden Jensen, Paul Daniel Lopez, Angela Moreau, Sarah Myrick, Jeff Overstreet, Jose Fernando Pena, Kathy Raner, Justin Neal Raner, Russell Rutherford, Bradley J. Schnitker, Marci Schnitker, David Smith, Jay Voto)

Increment Analysis

Janice Akins questioned the specific increments represented on the Public Notice publication, stating that they are from 2021 and may be out of date.

RESPONSE 7: TCEQ welcomes public participation in the permitting process. The Executive Director instructs applicants to provide public notice as required by commission rules, in accordance with statutory requirements. Specifically, the TCAA § 382.056 requires that an applicant publish notice. Notice must be published in a newspaper of general circulation in the municipality in which the proposed facility is located or proposed to be located. The notice must include a description of the facility, information on how an affected person may request a public hearing, pollutants the facility will emit, and any other information the TCEQ requires by rule. The commission also requires that notice be published in an alternative language if the elementary or middle school nearest the proposed facility offers a bilingual education program as required by Texas Education Code Chapter 29, Subchapter B. The TCEQ adopted rules for these public notice requirements in 30 TAC § 39.603, Public Notice of Air Quality Applications, Newspaper Notice.

As described in the Procedural Background above, The Notice of Receipt and Intent to Obtain an Air Quality Permit (first public notice, NORI) for this permit application was published in English on December 19, 2021, in the *Herald Democrat*. The Notice of Application and Preliminary Decision for an Air Quality Permit (second public notice, NAPD) was published on February 22, 2024, in English in the *Herald Democrat*. A Consolidated Notice of Receipt of Application and Intent to Obtain Permit and Notice of Application and Preliminary Decision (third public notice, consolidated NORI and NAPD) was published in English on July 9, 2024, in the *Herald Democrat* and in

Spanish on July 9, 2024, in *La Prensa*. To demonstrate compliance with public notice requirements, applicants are required to provide the Office of the Chief Clerk with copies of the published notice and a publisher's affidavit verifying facts related to the publication, including that the newspaper is a paper of general circulation in the municipality in which the proposed facility is located or proposed to be located.

TCEQ rules also require that a public meeting be held if a member of the legislature who represents the general area in which the facility is located requests a public meeting or if the Executive Director determines that there is a substantial or significant degree of public interest. *See* 30 TAC § 55.154(c)(2). A public meeting was held on March 25, 2024, at 7:00 PM at the Hilton Garden Inn Denison/Sherman/At Texoma Event Center, 5015 South U.S. 75, Denison, Texas 75020. The notice of public meeting was mailed on February 9, 2024, and an amended notice of public meeting was mailed on February 13, 2024. The public comment period ended on August 14, 2024, following publication of a third combined notice due to updates to the application and to perform Spanish language publication in order to correct deficiencies in the previous public notice. Additionally, signs were required to be re-posted for the duration of the comment period in both English and Spanish.

Any member of the public may submit comments on the application. This Response is the written response to all formal comments received during the comment period for the application. Directions for accessing a copy of this Response on the TCEQ CID will be mailed to each person who submitted a formal comment or who requested to be on the mailing list for this permit application and provided a mailing address. All timely formal comments received are included in this Response and are considered before a final decision is reached on the permit application. This Response provides a final 30-day period to request a contested case hearing.

In order for an issue to be considered at a contested case hearing, it must have been first raised in a comment or in a request for a contested case hearing during the public comment period by the affected person or group requesting the hearing. The Commissioners' decision whether to grant a contested case hearing is based in part on the information the requester submits. When requesting a hearing, it is necessary to demonstrate that the requester is an "affected person," in order to be granted party status. This means that the requester must be personally affected by the permit decision and that granting the permit would specifically affect the requester in ways not shared by the general public – for example, by impairing the requester's health or safety or by interfering with the use or enjoyment of the requester's property. Affected persons may request a contested case hearing to challenge the Executive Director's decision on an application. The applicant may directly refer the application to the State Office of Administrative Hearings for a contested case hearing, instead of waiting for the Commission to make a determination on whether the case should be referred.

The public notice rules applicable to this application are described above. An overview of public participation for applications filed after September 1, 2015 is available on the TCEQ website at: https://www.tceq.texas.gov/agency/decisions/participation/permitting-participation/pub_part.html. *See* Response 10 for more information about the permitting process.

Number of Comments

The Office of the Chief Clerk counts comments as they arrive and they subsequently classify them – specifically, whether they fall as a general comment, a contested case hearing request, a meeting request, or all of these. These comment counts fluctuate as comments are manually sorted into categories and changed from “comments” to, for instance, “contested case hearing request.” For projects with a high volume of comments, it is typical for counts to fluctuate and change as the comments are gone through one by one and sorted into their categories.

Sign Postings and Public Comment Period

Title 30 TAC § 39.604 requires that signs be placed at the site of the existing or proposed facility. The sign(s) must state that an air permit application has been filed, the proposed permit number, and how the public may contact the commission for further information.

Each sign placed at the site must be located within ten feet of every property line paralleling a public highway, street, or road. Signs must also be visible from the street, meet lettering requirements, meet size requirements, and be spaced at not more than 1,500-foot intervals. A minimum of one sign, but no more than three signs are required along any property line paralleling a public highway, street, or road. Finally, in cases which notice is required to be published in an alternative language, the applicant must also post signs in the applicable alternative language.

The Applicant provided verification to the Office of the Chief Clerk in accordance with 30 TAC § 39.605 that signs were posted at the proposed site in accordance with 30 TAC § 39.604. The Applicant provided verification to the Office of the Chief Clerk in accordance with 30 TAC § 39.605 that signs were posted at the proposed site in accordance with 30 TAC § 39.604. During the first public notice, the signs were not displayed or went missing. Comment periods and sign posting durations can be extended by TCEQ, and in this case the comment period was extended by the number of days the signs were observed to be missing.

Bilingual Notice and Public Participation / Environmental Justice

TCEQ and the Applicant both attempted to contact the Howe ISD to determine whether or not a Bilingual Education Program was required in the district. The administrative staff failed to return phone calls. However, due to public input relating to which local school district was the correct one and claims that a Bilingual Education Program was required for Howe ISD, TCEQ required the applicant to publish a Consolidated Notice of Receipt of Application and Intent to Obtain Permit and Notice of Application and Preliminary Decision (third public notice), providing updated notice for the application in both English and Spanish. This was published in Spanish on July 9, 2024, in *La Prensa*.

Air permits evaluated by the TCEQ are reviewed without reference to the socioeconomic or racial status of the surrounding community. The TCEQ is committed to protecting the health of the people of Texas and the environment regardless of location. A health effects review was conducted for the proposed facilities during the permit review and the permit was found to be protective of human health and the environment. The TCEQ encourages participation in the permitting process. The Office of the Chief Clerk works to help the public and neighborhood groups participate in the regulatory process to ensure that agency programs that may affect human health or the environment operate without discrimination and to make sure that concerns are considered thoroughly and are handled in a way that is fair to all. You may contact the Office of the Chief Clerk at 512-239-3300 for further information. More information may be found on the TCEQ website: [Title VI Compliance at TCEQ - Texas Commission on Environmental Quality - www.tceq.texas.gov](https://www.tceq.texas.gov/title-vi-compliance).

A member of the public may request to be put on a mailing list for a specific permit or for a county. Additionally, anyone who provides a comment, requests a public meeting, or requests a contested case hearing is automatically added to the mailing list. For more information, please visit [Overview: Public Participation in Environmental Permitting - Texas Commission on Environmental Quality - www.tceq.texas.gov](https://www.tceq.texas.gov/public-participation).

Increment Analysis

The results of the PSD increment analysis are required to be included in Notice of Application and Preliminary Decision if the analysis threshold is triggered. The PSD increment is the amount of pollution an area is allowed to increase. PSD increments prevent the air quality in clean areas from deteriorating to the level set by the NAAQS. The NAAQS is a maximum allowable concentration "ceiling." A PSD increment, on the other hand, is the maximum allowable increase in concentration that is allowed to occur above a baseline concentration for a pollutant. The increment analysis reflects the project's modeling demonstration against fixed increments which cannot be exceeded. The PSD increment has not changed since the NORI was published in 2021.

COMMENT 8: Public Meeting

Colin Drew Hunter commented that an in-person public meeting should be granted instead of hiding behind computers because of COVID-19, further stating that the public has the right to publicly face the Applicant and TCEQ. Bonita L. Overbey questioned the location of the public meeting and asks why it could not be held at the church located near the proposed project site. Liberty Johnson commented that the public meeting had too much technical jargon that left the community with more questions that the Applicant and TCEQ were not in a position to answer. Sarah Myrick expressed concern that the TCEQ provided advice on how to get the public meeting scheduled before the PM_{2.5} standard change took effect. Ray H. Purdom asks why there wasn't any type of illustration or drawings at the public meeting to show what the proposed plant will look like, such as an architecture type plan, general layout of the facility, map to show the location and plant size, or any existing photos.

Deirdre Diamond expressed concern that an individual was removed from the public meeting, specifically requesting another public meeting where 'the right to free speech is protected and the Texas Bill of Rights is not violated by removing affected parties,' further stating that removal of the individual violates the open meetings act. Ms. Diamond expressed concern regarding the length of the public meeting, stating that it was too limited.

Jeremy Devore expressed concern regarding the hotel staff at the public meeting being unhelpful, expressed concern that no provisions were made to assist individuals with disabilities to navigate the venue or access the meeting area, and expressed concern that attendees were 'unjustly threatened with expulsion.' Mr. Devore commented that TCEQ failed to plan for logistical challenges, including the size of the venue compared to the turnout.

(Jeremy Devore, Deirdre Diamond, Colin Drew Hunter, Sarah Myrick, Bonita L. Overbey)

RESPONSE 8: Title 30 TAC § 55.154(c)(2) requires that a public meeting be held if a member of the legislature who represents the general area in which the facility is located requests a public meeting or if the TCEQ Executive Director determines that there is substantial or significant degree of public interest. A public meeting was held on March 25, 2024, at 7:00 PM at the Hilton Garden Inn Denison/Sherman/At Texoma Event Center, 5015 South U.S. 75, Denison, Texas 75020. The notice of public meeting was mailed on February 9, 2024, and an amended notice of public meeting was mailed on February 13, 2024.

The location was selected by the Applicant and agreed to by TCEQ due to the potential size of the crowd, its availability, and ability to accommodate venue requirements. 30 Texas Administrative Code § 55.154(b) requires that a meeting be held in the county where the facility is, or is proposed to be, located. Over 400 people attended the public meeting, and it was necessary that a venue was selected that would be able to safely accommodate a crowd of this size.

TCEQ staff strives to explain technical issues in as simple terms as possible. Additionally, individuals had the opportunity to provide additional public comment requesting clarification or asking additional questions after the close of the public meeting. The public comment period closed on August 14, 2024, three and a half months after the close of the meeting.

The Applicant was required to provide an additional protectiveness demonstration showing compliance with the revised PM_{2.5} NAAQS standard. After TCEQ reviewed the demonstration, the Applicant was then required to publish additional notice and make the revised protectiveness demonstration available for public review and comment. TCEQ elected to proceed with scheduling a public meeting following the initial declaration of technical completeness rather than wait for the new PM_{2.5} standard implementation given uncertainties about the effective dates and nature of the standard.

There is no requirement in state rules or statute for an Applicant to post printed illustrations or drawings at the public meeting. This information was available in copies of the application which were required to be made available during the public comment period.

Individuals who are disruptive, abusive, or who are considered a security risk can and will be removed from public meetings. The purpose of a public meeting is to take public comments. These comments can be submitted online during the comment period and are not considered differently than those which are given at a public meeting. Similarly, a public meeting cannot last indefinitely, and its length is often constrained by the venue. Everyone that wished to make a public comment on the record was provided the opportunity at the public meeting.

There are not fixed requirements in TCEQ rules relating to venue for a public meeting, other than that the meeting must be held in county in which the proposed plant will be located. TCEQ staff in the Office of the Chief Clerk provide applicants with requirements that must be met by the selected venue, including compliance with the American with Disabilities Act, and a size necessary to accommodate the number of people expected at a meeting. During the time before the start of the meeting as people were coming in, it was decided that more seating was necessary, and additional chairs were provided. Most people were able to find seating at the venue. Applicants are instructed to select a venue of suitable size is based on the number of comments received.

COMMENT 9: Access to Permit Documents

Deirdre Diamond asks for a copy of the permit applications sent to her directly via e-mail.

(Deirdre Diamond)

RESPONSE 9: Title 30 TAC § 39.405 requires the Applicant to provide copies of the application and the Executive Director's preliminary decision at a public place in the county in which the facility is located or proposed to be located. The rules also require the public have an opportunity to review and copy these materials. In addition, the application, including any subsequent revisions to the application, must be available for review for the duration of the comment period. The Applicant represented that the application was made available at the Howe Community Library, 315 South Collins Freeway, Howe, Grayson County, Texas. In addition, a copy of the application was also available at the TCEQ Dallas/Fort Worth Regional Office and the TCEQ Central Office. The comment period closed on August 14, 2024.

The TCEQ is committed to upholding the Public Information Act (PIA) and ensuring public access to its records. All TCEQ records are available for public viewing unless one of the exceptions to disclosure listed in the PIA Applies. Please see <https://www.tceq.texas.gov/agency/data/records-services/reginfo.html> for more information regarding Public Information Requests.

Beginning in July 2024, for applications administratively complete after June 1, TCEQ has posted administratively and technically complete applications on the agency website, and in the future, members of the public will be able to download these applications from this site. That was not available for this permit application.

COMMENT 10: Application Representations / Permit Review

Commenters question the representations made in the application, stating that there are numerous inaccuracies and misrepresentations. Commenters are concerned that the Applicant is using misinformation to circumvent proper processes and appear to be polluting less or more compliant than they actually will be. Commenters expressed concern that the Applicant is not being transparent about their application representations. Commenters expressed general concern regarding the TCEQ air permitting process. Commenters expressed concern that the application did not identify all potential sources of emissions. Wendy Smith expressed concern that the permit application did not include an authorized signature. Duncan C. Norton expressed concern that the application materials do not demonstrate compliance with 30 TAC § 116.11. David Smith questioned if the application followed EPA standards.

Commenters expressed concern that the Applicant and consultant received help from the TCEQ to correct mistakes made in the application. Commenters expressed concern that an entirely new permit application was submitted, stating this was used to circumvent all prior public comments.

Additional Impacts Analysis

Commenters are concerned that the Applicant claimed the proposed plant will not result in an increase of additional heavy industry businesses, including concrete plants, stating that the claim is most likely false.

Small Business Classification and Number of Employees

David Smith questioned the application representation of the company having fewer than 100 employees.

GHG Permit Number

Janice Akins expressed confusion as to why the title page of the application did not list the GHG permit number, while the 'special conditions' section did.

(Group A, Janice Akins, Art Arthur, Jeremiah D. Broyles, Tiffany Broyles, Art Clayton, James Matt Cooper, Camryn Craddock, Cassidy A. Craddock, Linda Carol Crain, Bruce W. Dawsey, Bruce Dawsey, Jeremy Q. Devore, Jeremy W. Devore, Jeremy Devore, Deirdre Diamond, Judy Searcy Dryden, Judith S. Dryden, Jesse Farrer, Harold C. Foster, Kenneth Griffin, Austin Grooms, Chloe Grooms, Matt Hardenburg, Lisa Hejny, Moses Hejny, Amy Hoffman-Shehan, Robin A. Horner, Laura T. Hunt, Phyllis D. James, Suzanna Dryden Jensen, William Landrum, Crystal Lawson, Jim Lucas, Trudy Lucas, Shelley Luther, Brian Mai, Jost Marr, Josh Marr, Davida Miorin, Angela Moreau, Jason Morin, Duncan C. Norton, Jeff Overstreet, Delfina Prisock, Kathy Raner, Justin Neal Raner, Russell Rutherford, Bradley J. Schnitker, Marci Schnitker, David Smith, Wendy Smith, Mark Vodry, Kimberly Vodry, Jay Voto, Jeff Whitmire, Kevin Wilson, Dorothy Schmoker)

RESPONSE 10: The TCAA provides the TCEQ with jurisdiction over air quality permitting in Texas. The Executive Director's staff conducts both an administrative and technical review of all applications received by the agency. The first step of the application review process is an administrative review which verifies the following:

- The correct application was submitted;
- The application and any associated forms have been signed by the appropriate Responsible Official;
- The company is an entity legally entitled to do business in Texas;
- The information is accurately recorded in the TCEQ's Central Registry;
- The appropriate application fee was received;
- The mailing addresses for the company and site are USPS validated; and
- There are no delinquent fees owed by the company.

Additionally, the administrative reviewer completes the draft first public notice package. Once a project is declared administratively complete, the application and the first notice package (Notice of Receipt of Application and Intent to Obtain Air Permit - NORI) are made available for public review. The air quality permit application then undergoes a technical review. During the technical review, the permit reviewer evaluates the following:

- All sources of regulated air contaminants at the proposed facility have been properly identified;
- Appropriate controls have been proposed for each emission source, including Best Available Control Technology (BACT) at a minimum;
- Emission calculations have been completed correctly using approved methodology and appropriate emission factors;
- Proposed emissions meet applicable state and federal requirements to be considered protective (in this case done through the use of air dispersion modeling, or an AQA);
- Compliance history for the site and the operator; and
- Public notice requirements are fulfilled.

Once all emission rates have been verified, the draft permit is created, and the application is deemed technically complete. The draft permit includes a Maximum Allowable Emissions Rate Table (MAERT), which limits the quantity of emissions an applicant may emit into the atmosphere. The emissions tabulated in the MAERT are also used as the input for the air dispersion modeling evaluation to determine if any adverse effects to public health, welfare, or physical property are expected to result from a facility's proposed emissions. The draft permit also includes the operational representations, which are documented in the draft Special Conditions and are the basis upon which the emissions were determined. If the Executive Director determines that the permit meets all applicable rules and regulations, the Executive Director then makes a preliminary decision recommending that the permit be issued. In other words, the Executive Director's preliminary decision indicates that the technical review is complete.

In addition, an applicant is bound by its representations in the application and those representations become an enforceable part of the permit, including production rates, authorized emission rates, and equipment. If the Applicant deviates from the representations made in the application, on which the permit was developed, the Applicant may be subject to enforcement action.

Application Representations

The Air Permits Division and other applicable TCEQ staff have conducted a thorough review of this permit application to ensure it meets the requirements of all applicable state and federal standards. As stated above, an applicant is bound by its representations in the application and those representations become an enforceable part of the permit, including production rates, authorized emission rates, and equipment. If the Applicant deviates from the representations made in the application, on which the permit was developed, the Applicant may be subject to enforcement action.

TCEQ Deficiencies, Mistake Corrections, and New Application Concerns

During the review process, the reviewer can and does often state expectations, suggest revisions, or state the utility of aspects such as more stringent control device requirements. The technical review ensures that the application and representation comply with state and federal law, in addition to TCEQ rules and requirements. Permit applications are routinely updated during the review process, and the application is not considered static. Updates the application do not invalidate prior public comments, though they can result in changes to how the comments are responded to later on in the process. All timely comments received on the Application will be addressed in this RTC.

Additional Impacts Analysis

The Applicant performed an Additional Impacts Analysis as part of the PSD air quality analysis. The analysis includes the aspect of associated growth. Associated growth is defined by the EPA as industrial, commercial, and residential growth that will occur in the area due to the source. The applicant conducted a growth analysis and determined that population in the plant area will not significantly increase as a result of the proposed project. The amount of projected residential growth depends on the size of the work force, the number of new employees, and the availability of housing in the area. Given consideration of these aspects, the conclusion that significant growth of population will not occur in Grayson County and nearby counties due to construction of this facility was considered acceptable.

Small Business Classification and Number of Employees

The question in the PI-1 relating to the number of employees and gross receipts is part of a series of questions to determine whether a company qualifies as a small business. If a company qualifies as a small business and is a minor source, then they are not required to publish Example B. In this case the answer for this new company is irrelevant because the emissions are greater than the major source threshold. Therefore, the small business exemption from publishing Example B cannot be claimed regardless of the number of employees.

GHG Permit Number

Permit numbers are included on a number of documents issued by TCEQ. After an applicant submits an initial permit application, permit numbers are assigned. These are included on relevant official documents when the final permit is issued. There is no requirement for an applicant to include all of the permit numbers on documents that they submit.

COMMENT 11: Area Map

Commenters state that Highway 902 was mislabeled and should be represented as Farm-to-Market Road 902. Commenters express concern that the map only shows 3,000 feet bordering the property and state that several residences and schools are missing from the area map representation. Commenters further state that ignoring individual residences is a ploy to circumvent further investigation from the TCEQ. Commenters are concerned that the provided area map did not reflect nearby food supply businesses or the nearby airport. Duncan C. Norton expressed concern that the provided area map did not include representations of a nearby rural airport, further stating that the location is not compatible with surrounding land use and does not comply with TCEQ distance limitation rules. Judy Searcy Dryden expressed concern that the application represented an incorrect address for the plant location, stating it does not exist. Ms. Dryden also requests that a 5,000-foot radius be considered in the map, along with the associated mine/quarry and its data.

(Group A, Jeremy Devore, Jeremy Q. Devore, Judy Searcy Dryden, Chloe Grooms, Joshua Grooms, Suzanna Dryden Jensen, Duncan C. Norton, Jeff Overstreet, Kathy Raner, Neal Raner, Justin Neal Raner, Russell Rutherford, Marci Schnitker, David Smith, Wendy Smith, Mark Vodry, Kimberly Vodry)

RESPONSE 11: A farm to market road is a form of highway. Therefore, either the FM label or the use of the term Highway was considered acceptable in describing where the facility would be located. FM 902 or Highway 902 is the only road in Dorchester with that number associated. It was evident from the comments submitted that people are aware of the location of the proposed facility.

An area map must be submitted with an NSR permit application. The area map must include a true north arrow, accurate scale, the entire plant property, the location of the property relative to prominent geographical features, and a 3,000-foot radius for scale reference purposes. There is no requirement to label food supply businesses or aerodromes. The area map is a legacy requirement from when reviewers lacked easy access to computerized mapping. It not used in any sort of analysis. The documents submitted with the application and the supplemental use of software-based mapping tools were sufficient to allow the permit reviewer to confirm that the representations provided were accurate. The air dispersion modeling does not in any way involve the area map which is submitted with the application. The property line includes the area associated with the quarry. There are no distance limitations in applicable state or federal rules or laws relating to cement kilns.

COMMENT 12: Emission Rates and Calculations

Commenters questioned the accuracy and methodology for determining the emission rates for the proposed project. Duncan C. Norton expressed concern that the application materials do not demonstrate that the emissions calculations are correct and based on appropriate scientific methodology. Crystal Lawson commented that calculations are from 2021 and asks if the calculations have been updated to reflect 2023 or 2024 calculation methodologies and air quality standards. Janice Akins questioned the conservativeness of the represented emissions calculations.

(Janice Akins, Crystal Lawson, Duncan C. Norton)

RESPONSE 12: Emissions from this facility were determined by the use of EPA's Compilation of Air Pollutant Emission Factors, AP-42 Manual (AP-42 Section 1.4 Tables 1.4-1 and 1.4.2 (July 1998) and AP-42, 13.2.4 "Aggregate Handling and Storage Piles"); outlet grain loading based calculations, mass balance equations, federal standards (NSPS Subpart F, MACT Subpart LLL), TCEQ APDG 6422 Fugitive Guidance, and a BACT limitation basis. Greenhouse gas emissions were calculated using equation A-1 from 40 CFR Part 98, Subpart A. Emission rates are calculated using conservative emission factors and methodology. The TCEQ ensures the conservative nature of these calculations by evaluating each emission point at the maximum material throughput on both an hourly and an annual basis. The analysis also conservatively assumed the operating schedule of facilities or activities at the site as 24-hours per day. All of the methodologies utilized represent current practices.

The Applicant represented the appropriate methodologies to control and minimize emissions and utilized corresponding control efficiencies when calculating the emission rates. As provided in 30 TAC § 116.116(a), the Applicant is bound by these representations, including the represented performance characteristics of the control equipment. In addition, the permit holder must operate within the limits of the permit, including the emission limits as listed in the MAERT.

COMMENT 13: Proximity to Affected States, Tribal Nations, Class I Areas, and Notification Requirements

Commenters expressed concern that the Applicant represented the proposed plant will be located further than 100 kilometers from an affected state, tribal nation, or Class I Area. Commenters expressed concern that the Applicant has not notified or considered the affected States, tribal nations, or federal land managers with regard to the proposed project. Commenters ask that consideration be given to the Hagerman Wildlife Refuge and its future potential to be designated as a Type 1 refuge.

(Janice Akins, Paula A. Cavender, Shane Cavender, Cassady A. Craddock, Bruce Dawsey, Jeremy Q. Devore, Jeremy Devore, Chloe Grooms, Joshua Grooms, Moses Hejny, Suzanna Dryden Jensen, Josh Marr, Jost Marr, Jeff Overstreet, Emily Powell, Kathy Raner, Justin Neal Raner, Russell Rutherford, Bradley J. Schnitker, Marci Schnitker, David Smith, Wendy Smith, Mark Vodry, Kimberly Vodry)

RESPONSE 13: Class 1 federal lands include areas such as national parks, national wilderness areas, and national monuments. These areas are granted special air quality protections under Section 162(a) of the federal Clean Air Act.

The applicant performed an Additional Impacts Analysis as part of the PSD AQA. The ADMT evaluated predicted concentrations from the proposed project to determine if emissions could adversely affect a Class I area. The nearest Class I area, Wichita Mountains Wilderness, is located approximately 225 kilometers (km) from the proposed site.

The H₂SO₄ 24-hr maximum predicted concentration of 7 µg/m³ occurred approximately 243 meters from the property line towards the west. The H₂SO₄ 24-hr maximum predicted concentration occurring at the edge of the receptor grid, 10.6 km from the proposed sources, in the direction of the Wichita Mountains Wilderness Class I area is 0.526 µg/m³. The Wichita Mountains Wilderness Class I area is an additional 214.4 km from the edge of the receptor grid. Therefore, emissions of H₂SO₄ from the proposed project are not expected to adversely affect the Wichita Mountains Wilderness Class I area.

The predicted concentrations of PM₁₀, PM_{2.5}, NO₂, and SO₂ for all averaging times, are all less than de minimis levels at a distance of 7.3 km from the proposed sources in the direction of the Wichita Mountains Wilderness Class I area. The Wichita Mountains Wilderness Class I area is an additional 217.7 km from the location where the predicted concentrations of PM₁₀, PM_{2.5}, NO₂, and SO₂ for all averaging times are less than de minimis. Therefore, emissions from the proposed project are not expected to adversely affect the Wichita Mountains Wilderness Class I area.

TCEQ Form PI-1 provides guidance for informational purposes only on where to submit copies of the application and instructs applicants to retain records of such. TCEQ does not have the ability to determine if, for instance, other state agencies or tribal authorities have received copies of applications, nor does it verify such as part of the permit review process, and the form itself states that no data is required to be submitted as verification of this.

The Clean Air Act designated 158 areas in the United States as mandatory federal Class I areas when it was amended in 1977. These areas include international parks, national wilderness areas larger than 5,000 acres, national memorial parks larger than 5,000 acres and national parks larger than 6,000 acres. This classification did not include National Wildlife Refuges like Hagerman National Wildlife Refuge.

COMMENT 14: Fuel Options and Raw Materials

Commenters are concerned about the proposed fuel options represented in the application. Commenters are concerned about the burning of plastic waste, medical waste, industrial waste, and coal as fuel. Commenters ask if ecofriendly fuel options or renewable energy fuel alternatives were considered. Commenters expressed concern that the Applicant may use fuels other than the natural gas that was represented in the permit application. Commenters question how the Applicant represented use of natural gas if there are no natural gas lines near the proposed facility. Deirdre Diamond asks what type of natural gas is being used, who supplies it, and asks how much can be burned as allowed by the permit. Robert E. Dryden expressed concern about the burning of plastic waste as fuel. David Smith asks what raw materials testing has been done to estimate represented mercury and lead emissions. Judy Searcy Dryden expressed concern that the Applicant will have to utilize alternative fossil fuels, such as coal, to achieve the high temperatures required for cement production, which would be more destructive to the surrounding area.

(Group A, Ashley Beck, Francis Beck, Deirdre Diamond, Judy Searcy Dryden, Robert E. Dryden, Rex Glendenning, Donald E. Godwin, Suzanna Dryden Jensen, Julie Lanicek, Garrett McCown, Amy Meyer, Mitaj Nathwani)

RESPONSE 14: The draft permit limits fuels to natural gas containing no more than 5 grains of total sulfur per 100 dry standard cubic feet (dscf). Plastic waste is not proposed as a fuel. TCEQ does not have jurisdiction to require applicants to consider renewable energy fuel options. Natural gas is capable of generating the heat needed for the cement kiln. Natural gas is a mixture of hydrocarbons, primarily methane. There are no "types" of natural gas, but the TCEQ limits sulfur content which can be present in the fuel. Emissions of lead and mercury are related to raw materials used by the facility as feedstock to make cement, not fuel materials. The Applicant will be required to monitor emissions of mercury and lead emitted by the kiln to demonstrate compliance with the permit limitations and federal limitations. The review of the permit application does not include an analysis of where or how the applicant intends to acquire the fuel used in the plant.

COMMENT 15: Best Available Control Technology

General BACT Questions

Commenters questioned the best available control technology (BACT) proposed in the application. Matthew Muniz asked for a list of all expected outputs and controls represented in the application, along with examples of their effectiveness. Lisa Hejny asks if there is a detailed plan to utilize equipment that is truly BACT and produces a maximum reduction of all pollution and emissions. Duncan C. Norton expressed concern that the Application materials do not demonstrate that the site will have adequate air pollution control measures and will not utilize BACT. Lari Alexis Taylor-Barker asks if the emissions proposed appear to be on par with other cement plants, asks for details as to how pollution will be reduced or lowered, and asks how the carbon footprint can be reduced with outdated technologies. Crystal Lawson asks if BACT means best available technology based on the Applicants' finances, or if it is based on industry standards. Ms. Lawson further asks what the Applicant considers as BACT and if this will change if their finances change.

Opacity

Jeremy Devore questioned how the Applicant will meet the five percent opacity requirement.

Thermal Oxidizer

David Smith requests that the applicant be required to utilize a Thermal Oxidizer to control emissions.

Use of Enclosures

Mr. Smith questions how a two- or three-sided shed is able to have 85 percent or more containment and asks what is done with the slurry from the foggers that collect a portion of the dust and pollutants.

Cynthia J. Kaleri commented that EPA requests clarification on the following items with regard to use of the "three-tiered" approach as opposed to EPA's "Top-Down" methodology for determining BACT:

- **Kiln System BACT Analysis for Carbon Monoxide:** Ms. Kaleri requests that TCEQ explain the rationale for accepting the Applicant's overall CO BACT proposal as at least equivalent to what has been accepted in recent permit reviews for the same industry and explain how such a proposal is based on the maximum degree of reduction achievable accounting for technical feasibility and economic reasonableness. Ms. Kaleri commented that the EPA was unable to identify the TCEQs analysis of any site-specific differences or the effects of these differences on the achievability of lower CO BACT limitations imposed in recent permit reviews. Ms. Kaleri requests a discussion which explicitly identifies any compelling technical differences between the Applicant's proposed processes and the processes of other plants within the same industry, and any technical considerations and supporting documentation reviewed that impacted TCEQ's

decision to support the current CO BACT proposal as opposed to the other comparable BACT determinations (e.g., feed material organic carbon content, kiln design, infeasibility of add-on controls (RTO), collateral NO_x emissions, etc.). Finally, Ms. Kaleri requests that if any of the CO BACT determinations in recent permit reviews were determined to be irrelevant because of the associated limits accepted as BACT have not yet been demonstrated in practice, or that TCEQ believes these lower limits represent “beyond BACT” determinations, that this be included in the explanation as applicable.

- Kiln System BACT Analysis for Ammonia: Ms. Kaleri expressed concern that the application and TCEQ's Preliminary Determination Summary (PDS) simply state that an ammonia emission rate of 35 ppmv at 7 percent oxygen on a 30-day rolling average represents BACT, stating that no information on the BACT determinations for the same process and/or industry was identified within the administrative record. Ms. Kaleri requests that the TCEQ explain the rationale for accepting the Applicant's overall ammonia BACT proposal as at least equivalent to what has been accepted in recent permit reviews for the same industry.
- Kiln System BACT Analysis for Particulate Matter: Ms. Kaleri expressed concern that neither the permit application for the TCEQ's PDS explain the basis for the selection of the proposed condensable PM limitation, how the proposed BACT determination is comparable, or the primary drivers in condensable PM limit variability from other similar sources, citing other kiln BACT determinations provided in the RACT/BACT/LAER Clearinghouse (RBLC) which appear to be based upon an outlet grain loading basis, filterable PM per ton basis, or total PM basis. Ms. Kaleri requests that TCEQ explicitly identify the origin of the proposed emission rate (e.g., basis of emission factor, similar source stack testing, etc.) and the rationale behind determining representativeness of the proposed condensable PM emissions limitation.

(Jeremy Devore, Chloe Grooms, Lisa Hejny, Suzanna Dryden. Jensen, Cynthia J. Kaleri, William Landrum, Crystal Lawson, Matthew Muniz, Duncan C. Norton, Jeff Overstreet, Russell Rutherford, David Smith, Lari Alexis Taylor-Baker, Mark Vodry, Kimberly Vodry, David G. Sileven)

RESPONSE 15: Best available control technology (BACT) is an air pollution control method for a new or modified facility that through experience and research, has proven to be operational, obtainable, capable of reducing or eliminating emissions from the facility, and is considered technically practical and economically reasonable for the facility. BACT may be numerical limitations, the use of an add-on control technology, design considerations, the implementation of work practices, or operational limitations. The Applicant has represented in the permit application that BACT will be used for the proposed new and modified sources.

The contaminants authorized by this permitting action will be carbon monoxide, hazardous air pollutants, sulfur dioxides, nitrogen oxides, organic compounds, particulate matter including particulate matter with diameters of 10 microns or less and 2.5 microns or less, sulfur dioxide, sulfuric acid, lead, and greenhouse gases. The primary control measures applied to this facility are as follows in the below table:

Table 9: Best Available Control Technology

Source Name	EPN	Best Available Control Technology Description
Kiln System	21-SK-230	<p>PM, PM₁₀, PM_{2.5}: Add on control: Baghouse at 0.002 grains per dry standard cubic foot (gr/dscf). 5% opacity. <i>This exceeds state and PSD BACT.</i></p> <p>PM, PM₁₀, PM_{2.5} (filterable): 0.02 lbs. PM per ton of clinker on a 1-hour average and a rolling 12-month average</p> <p>PM, PM₁₀, PM_{2.5} (condensable): 0.28 lbs. PM per ton of clinker on a 1-hour average, 30-day rolling average, and a rolling 12-month average.</p> <p>CO: No add on controls. Proper design and operation.</p> <p>BACT determination based on other kilns. 9.0 lbs of CO/ton of clinker on a 1-hour average and 30-day rolling average. 3.0 lbs. of CO/ton of clinker on a rolling 12-month average. CO emission rates are in part driven by the composition and concentration of organic materials in the kiln feed and vary regionally dependent on the nature of the quarried limestone. The proposed rate is consistent with other Texas kilns using limestone from this general region, though this can vary by quarry. TCEQ was unable to locate any cement kilns using add on controls for specifically for CO control. Good combustion practices with proper design and operation were determined as BACT.</p>

Source Name	EPN	Best Available Control Technology Description
		<p>NO_x: Add on and other control: Selective Catalytic Reduction (SCR) system or combination of SCR and Selective Non-Catalytic Reduction (SNCR) system, staged combustion, low NO_x burners, good combustion practices. Notably the proposed NO_x rate greatly exceeds RBLC PSD and state BACT requirements, which is typically 1.5 lb/ton of clinker compared to the 0.54 lb/ton of clinker proposed.</p> <p>0.54 lbs. of NO_x per ton of clinker on a 1-hour rolling average, 30-day rolling average, and 12 month rolling average.</p> <p>SO₂: Add on and other control: Scrubber with a represented control efficiency of 90%, the alkali absorption inherent in the pre-calciner kiln, and the use of low sulfur content natural gas as fuel.</p> <p>0.60 lbs. SO₂ per ton of clinker on a 1-hour rolling average, 0.40 lb per ton of clinker on a 30-day and 12 month rolling average.</p> <p>VOC: No add on controls. Good combustion practices. 24 ppmv at 7% O₂ for THC on a 1-hour average, 30-day rolling average, and 12 month rolling average. Note that VOC levels are related to composition and concentration of organic materials in the quarry and</p>

Source Name	EPN	Best Available Control Technology Description
		<p>BACT determinations are driven by this.</p> <p>O-HAP No add on controls. 12 ppmvd total organic HAP on a 30-day rolling average and 12 month rolling average. Note that this rate is based on preliminary organic information from the quarry.</p> <p>Dioxins and Furans No add on controls. 0.20 nanograms per dry standard cubic meter (TEQ), corrected to 7 % O₂ on a 30-day rolling average and 12 month rolling average.</p> <p>H₂SO₄: Add on and other control: scrubber. The control efficiency of the scrubber will be specified in an as-built modification. 1.10 lbs. per ton of clinker on an hourly basis when the in-line raw mill and scrubber are not operating. 0.11 lbs. per ton of clinker on a 12-month rolling average basis.</p> <p>HCl: No add on controls. 3 ppmvd corrected to 7% O₂ on a 30-day rolling average and 12 month rolling average.</p> <p>Hg No add on controls. 0.000021 lb/ton of clinker on a 30-day rolling average and 12 month rolling average.</p>

		<p>Pb 7.50E-05 lb/ton of clinker on a 30-day rolling average and 12 month rolling average.</p> <p>GHG: No add on controls. Proper design and operation. 0.92 lbs. per ton of clinker on a 30-day rolling average.</p> <p>NH₃ (SCR): No add on controls. Operation in a manner to minimize ammonia slip. 35 ppmv at 7% O₂ on a 30-day rolling average. This rate is consistent with or better than other cement kilns which were reviewed.</p> <p>MSS: The Applicant has represented the following in relation to kiln startup and shutdown:</p> <p>The SCR will be operating at all times when fuel is being fired in the kiln/pre-heater except during kiln heat-ups at the beginning of startup. During these times, no raw materials will be fed into the kiln. During a cold startup after major refractory work, it will take about 36 hours to heat up the kiln. This operation is expected to only occur once per year. During the kiln heat-up process, NO_x emissions are estimated to range from 3 to 12 lb/hr based the AP-42 Table 1.4-1 NO_x emission factor for a large (>100 MMBtu/hr) boiler equipped with a low NO_x burner*.</p> <p>This NO_x emission rate range is well below the proposed MAERT NO_x limit for normal kiln operations of 75.34 lb/hr, which is less than the kiln emission rate of 143.7 lb/hr evaluated in the AQA submitted along with the initial application</p>
--	--	---

Source Name	EPN	Best Available Control Technology Description
		<p>materials. During these kiln heat-up periods, supplemental air will be added to ensure that any combustion emissions are being exhausted. Although stack flow and temperature during these kiln heat-up periods have not been quantified, any reduction in dispersion due to stack flow and/or temperature is not expected to offset the ~13X lower NO_x emissions expected during planned kiln MSS periods shown in the example below.</p> <p>In addition, the total planned kiln MSS operating hours per year are expected to be not more than 72 hr/yr, which would qualify as an intermittent source under TCEQ and EPA modeling guidance. The expected planned MSS hours are listed below:</p> <p>Case 1 - Kiln heat-up from cold after major refractory work - estimated to occur once per year at main maintenance stoppage (36 hrs per event)</p> <p>Case 2 - Kiln heat-up from cold after maintenance work w/o refractory work - estimated to occur once per year at secondary maintenance stoppage (12 hrs per event)</p> <p>Case 3 - Kiln heat-up from short stoppage for secondary maintenance work not requiring a full cool-down - estimated to occur about four times per year (6 hrs per event)</p> <p>Example Calculation - Maximum heat input during any warm-up case is not expected to exceed 81 MMBtu/hr. Therefore, the maximum</p>

Source Name	EPN	Best Available Control Technology Description
		<p>NO_x emissions during warm-up periods are estimated as follows:</p> $81 \text{ MMBtu/hr} * 140 \text{ lb NO}_x / 10^6 \text{ scf} / 1020 \text{ Btu/scf} = 11.15 \text{ lb/hr NO}_x$ <p>* It should be noted that the factor used for the qualitative comparison above is conservative in that it reflects a low NO_x burner for a large (>100 MMBtu/hr) combustion unit; however, given that the kiln burner is a low NO_x burner rated at less than 100 MMBtu/hr (peak heat input during a start-up is expected to be approximately 81 MMBtu/hr), the NO_x emissions from the kiln burner during start-up could be as much as 36X lower than the emissions modeled in the AQA.</p>
Finish Mill and Air Heater	51-SK-250	<p>15.9 MMBtu/hr heater: NO_x: 0.01 lb/MMBtu based on the higher heating value of the fuel and the use of a low NO_x burner. PM, PM₁₀, PM_{2.5}: Add on control: Baghouse at 0.005 gr/dscf. 5% opacity. This exceeds published TCEQ BACT of 0.01 gr/dscf.</p>
Crusher, Milling, Raw Material Handling, and Product Handling	BF-Series EPNs (Numerous)	<p>PM, PM₁₀, PM_{2.5}: Add on control: Baghouse at 0.0025 gr/dscf. 5% opacity.</p>
Limestone, Gypsum, High Grade Limestone, and Sand Stockpiles	LS STKPL, ADD STKPL	<p>PM, PM₁₀, PM_{2.5}: 90% reduction. Stockpiles will be required to be stored within a fully enclosed building.</p>
Ammonia handling	NH3FUG	<p>NH₃: AVO checks once per shift (28AVO). A control efficiency of 93-97% - dependent on the piping component type.</p>

Source Name	EPN	Best Available Control Technology Description
Emergency Generator Engine	EG-1	Products of combustion: Limited to pipeline quality natural gas. Subject to 40 CFR Part 60 JJJJ and Part 63 ZZZZ. Operation is limited to 100 hours per year. A non-resettable hour meter is required in the Special Conditions.
Raw Material Loading	RR_MH, TRK_MH	PM, PM₁₀, PM_{2.5}: 85% reduction. Partial enclosure defined as consisting of two sided (rail loading) or three-sided walls (truck loading) with fogging nozzles. Dustless telescopic spouts are required be used for loading trucks or rail from bins or silos. 85% is conservative given the additional controls and aspiration on this system.
Raw Material Handling (Crusher Building)	LSCRSHBD_MH	PM, PM₁₀, PM_{2.5}: 85% reduction. The actual crusher is controlled by a baghouse (see BF series BACT discussion), and this EPN is the dump into the crushing system. Partial enclosure is defined as three-sided walls with fogging nozzles. The operation is represented as taking place within the crusher's building, and the crusher loading hopper will be located below-grade to accommodate trucks dumping mined limestone. Therefore, 85% is expected to be a conservative control efficiency.
Silo Loading	N/A	Dustless telescoping spouts are required for these. This removes the units as potential fugitive dust sources, and emissions would be associated with the baghouses/dust collectors which control these units.

Source Name	EPN	Best Available Control Technology Description
ILE MSS Activities	MSS FUG	<p>Refractory Removal: PM, PM₁₀, PM_{2.5}: Refractory (a bricklike material) is removed as needed for repairs or replacement. Operations taking place inside the kiln or cooler will be enclosed by nature, resulting in a 90% reduction in emissions. Drop into trucks was accounted for with no controls.</p> <p>Vacuum Truck Loading and Unloading: PM, PM₁₀, PM_{2.5}: Partial enclosure will be utilized for an 85% reduction on loadouts. The trucks have a filter with an outlet grain loading of 0.01 gr/dscf for loading operations.</p> <p>CEMS Calibration NO_x, CO, THC, SO₂ Emissions are due to the release of calibration gas from the feed analyzers and CEMS unit. No add on controls.</p>
Housekeeping	(non-regulated facilities – nuisance dust prevention)	<p>Plant roads are required to be paved and cleaned, as necessary, to control the emission of dust to the minimum level possible under existing conditions. Haul roads are required to be sprinkled with water and/or chemicals, as necessary, to maintain compliance with all applicable TCEQ rules and regulations. Blasting is forbidden from being utilized on site to acquire raw materials for cement production. A street sweeper and other mobile equipment is required to pick up debris from the plant roads. The street sweeper will be a full-sized truck which can be driven to the</p>

Source Name	EPN	Best Available Control Technology Description
		mined-out quarry to dispose of the debris collected.

The permit reviewer evaluated the proposed BACT and confirmed that all sources meet or exceed state and PSD BACT.

The permit reviewer evaluated this information, including the emission reduction options available for the process/industry. While technical practicability is established through the demonstrated success of an emission reduction option based on previous use and/or an engineering evaluation of a new technology, economic reasonableness is determined by the cost-effectiveness of controlling emissions (expressed as dollars per ton of pollutant reduced) and does not consider the effect of emission reduction costs on corporate economics. Based on this analysis, no additional controls are required for any of the proposed facilities. In many cases the Applicant exceeded BACT.

Nonattainment permits must include Lowest Achievable Emission Rate (LAER), as opposed to BACT. The proposed plant is located in Grayson County, which is currently designated as being in attainment or unclassifiable for all pollutants; therefore, nonattainment review and LAER requirements are not applicable to the proposed project.

Kiln System BACT Analysis for Carbon Monoxide:

CO emission rates are in part driven by the composition and concentration of organic materials in the kiln feed and vary regionally dependent on the nature of the quarried limestone. The proposed rate is consistent with other Texas kilns using limestone from this general region, though this can vary by the geologic makeup of individual quarries. TCEQ was unable to locate any cement kilns using add on controls specifically for CO control. Because of regional variability with cement kiln raw materials, good combustion practices with proper design and operation were determined as BACT.

Kiln System BACT Analysis for Ammonia:

TCEQ reviewed ammonia slip concentrations for all cement kilns permitted in Texas, as well as the RBLC database and found none with a lower ammonia slip concentration. Accordingly, 35ppm was accepted as BACT.

Kiln System BACT Analysis for Particulate Matter:

PSD and state BACT for cement kilns focuses on the filterable PM limit, due to the fact that federal standards in 40 CFR Part 60 (NSPS) Subpart F and 40 CFR 63 (NESHAPS) Subpart LLL solely limit filterable PM to 0.02 lbs of PM per ton of clinker. Condensables can be affected by aspects such as fuel sources and organics in the raw materials, and many of the individual condensable pollutants are regulated by their own state permit and federal limitations (for instance, sulfur compounds). Similar to CO emissions, organics in the raw materials can affect this rate on a per-site basis. Calculations and limits were based on another cement kiln located in Texas rather than EPA AP-42 factors for this reason. The Applicant proposed a condensable limit of 0.28 lbs of PM per ton of clinker on a 1-hour average, 30-day rolling average, and a rolling 12-month average. This was accepted as BACT.

COMMENT 16: Questions Regarding the Draft Permit

Duncan C. Norton expressed concern that the draft permit does not reflect restrictions that were represented in the application. David Smith asks if a truck wash would be required for outbound cement tanker trucks to keep fugitive cement dust off of local roads, buildings, and vehicles. David Smith commented that he rejects the special condition that allows visible fugitive emissions across property lines, stating that this will be a nuisance and a continual violation. Atul Dave commented that an initial permit should be limited to two years only, and then assessments by state agencies need to be done before issuance of a renewal of the permit.

Special Condition No. 18

David Smith expressed concern that haul roads and all other unpaved roads do not have a standard for dust control other than "compliance with rules and regulations," stating that a 95% control efficiency should be mandated for all unpaved roads as it is a standard widely used in the mining industry and should be used for the proposed plant.

Special Condition No. 27, Subpart B

David Smith expressed concern that the permit conditions allow continued operation while trying to contain or repair a leak and asks why the plant isn't required to shut down until it is fixed.

Special Condition No. 35

David Smith expressed general confusion regarding the proposed condition requiring additional testing if 2% or more production is achieved from the previous emissions compliance test, asking what the basis is, how the 10% rule can apply, asks why the maximum production rate is not set based on what is demonstrated and achieved during testing, and asks what the maximum hourly production rate is under the permit for testing purposes if testing is done in less than 24-hour intervals.

Special Condition Nos. 40, 45, 46 and 47

David Smith asks why the Finish Mill stack does not have a Continuous Emissions Monitoring System (CEMS) or Continuous Parameter Monitoring System (CPMS) for PM, NO_x, and CO emissions. Mr. Smith commented that that a six-minute visible emissions check is inadequate and asks why the permit does not contain enforceable NO_x and CO limits when it has a natural gas fired hot gas generator. Mr. Smith commented that the Finish Mill should have enforceable limits for ammonia and mercury emissions and if not limits, then the permit should include a prohibition on the use of synthetic gypsum.

(Duncan C. Norton, David Smith, Atul Dave)

RESPONSE 16: TCEQ regulates nuisance dust, and has implemented requirements relating to this, specifically the roads are required to be paved and cleaned. Haul roads are required to be sprinkled with water and/or chemicals as necessary. A street sweeper will be required to pick up debris from plant roads. As explained in Response 25, TCEQ does not have jurisdiction over blasting or quarry operations, therefore, the TCEQ rules do not require an applicant to analyze emissions resulting from quarry operations, blasting, roads, or the use of trucks in an individual permit application. The draft permit forbids the use of blasting as a nuisance dust prevention measure, and the Applicant has represented that it will not be necessary for quarrying activities.

The property line visible emission limitation and monitoring requirements found in the draft permit are based on EPA monitoring methods for fugitive emissions. In addition, an applicant is bound by its representations in the application and those representations become an enforceable part of the permit, including production rates, authorized emission rates, and equipment. If the Applicant deviates from the representations made in the application, on which the permit was developed, the Applicant may be subject to enforcement action. The permit term is 10-years, after which the applicant will have to renew the permit to continue operation. If the applicant decides to change or amend their operations during that time, the applicant would have to submit a permit amendment application which TCEQ would have to approve.

Special Condition No. 18

TCEQ cannot regulate haul roads or other unpaved roads as a facility per THSC § 382.003(6). TCEQ rules forbid nuisance dust under 30 TAC § 101.4, and therefore often implements nuisance prevention measures in permits. As previously described, the draft permit requires housekeeping measures intended to prevent nuisance dust.

Special Condition No. 27, Subpart B

Special Condition No. 27, Subpart B provides control measures and repair requirements for when an ammonia leak in the ammonia handling system associated with the NO_x reduction system occurs. A leak from the ammonia handling system could occur whether or not the system was actively supplying ammonia and would not be associated with operation of the rest of the plant. If the system was shut down completely, the leak would still occur, therefore shutting down operations would

provide no benefit for leak prevention. This Special Condition requires beginning repairs on a leak within 1 hour of detection. It prescribes best management practices for isolating, repairing, and containing the leak. Specifically, it requires isolating the leak, commencing repair or replacement of the leaking component and utilizing a leak collection/containment system to prevent the leak until repair or replacement can be made if immediate repair is not possible.

Special Condition No. 35

Early versions of this draft condition originally had a transcription error where the 10% increase second figure should have matched the previous 2% increase testing threshold in the paragraph. It was subsequently revised after new stacking test boilerplate language became available. The new language requires testing following any increase in production, though it allows for increases in production without testing if certain thresholds relating to allowable emissions are not exceeded.

Special Condition Nos. 40, 45, 46, and 47

The Finish Mill utilizes a small air heater to achieve desired temperatures for milling of the clinker into a powder. The proposed heater is 15.9 million British thermal units per hour (MMBtu/hr). This is well below the 100 MMBtu/hr rate which is the threshold for which TCEQ requires the use of a CEMS. Similarly, the small baghouse filter on the mill is below the size and use case for which TCEQ requires CPMS. Instead, pressure drop monitoring will be used to determine proper function and integrity of the filter unit. Opacity check demonstration requirements are based on methods prescribed by the EPA. The Finish Mill does not require the use of a SNCR and its ammonia injection to achieve its emission rates given its small size. Therefore, it is not a source of ammonia emissions. Additionally, unlike in a kiln, the temperatures in the mill are not sufficient to volatilize any residual mercury in the clinker. Accordingly, EPA does not have standards for pollutants such as mercury from Finish Mills. Ammonia is a gas in normal conditions and gypsum and synthetic gypsum are calcium sulfate dihydrate. These minerals can contain impurities of various other minerals or metals, but concentrations are extremely low. Gypsum is a common mineral in soil and rock formations. It is used for household use, in food, water treatment, agriculture, and home construction. Accordingly, TCEQ does not require a protectiveness demonstration beyond the NAAQS, as explained in Response 1.

COMMENT 17: Compliance History

Commenters expressed concern that the Applicant does not have experience in operating a cement plant, and questions how the Applicant will comply with the permit. Anthony Dimarco asks how many plants the Applicant has operated, what the record has been for emissions within and outside of the standard operating limits, asks if these emissions have been favorable or not, and asks where to find the historical data.

(Ashley Beck, Emily Brooks, Lee Collins, Anthony Dimarco, Don Horn, Robin A. Horner, Scott Horner, Liberty Johnson, Julie Lanicek, James Stringfield, David G. Sileven, Gary Schnitker, Jennita Wingate)

RESPONSE 17: During the technical review of the permit application, a compliance history review of both the company and the site is conducted based on the criteria in 30 TAC Chapter 60. These rules may be found at the following website:
<https://www.tceq.texas.gov/rules/index.html>.

The compliance history is reviewed for the five-year period prior to the date the permit application was received and includes multimedia compliance-related components about the site under review. These components include: enforcement orders, consent decrees, court judgments, criminal convictions, chronic excessive emissions events, investigations, notices of violations, audits and violations disclosed under the Audit Act, environmental management systems, voluntary on-site compliance assessments, voluntary pollution reduction programs, and early compliance. However, the TCEQ does not have jurisdiction to consider violations outside of the State of Texas.

A company and site may have one of the following classifications and ratings:

- High: rating below 0.10 - complies with environmental regulations extremely well;
- Satisfactory: rating 0.10 - 55.00 - generally complies with environmental regulations;
- Unsatisfactory: rating greater than 55.00 - fails to comply with a significant portion of the relevant environmental regulations.

The company rating reflects the average of the ratings for all sites the company owns in Texas. The site and company ratings are not applicable to the proposed project, as both the company and proposed facility are new. Additionally, TCEQ cannot deny a permit because a company is new, or does not have a compliance history record. See Response 18 regarding Compliance and Enforcement.

COMMENT 18: Compliance and Enforcement

Commenters expressed concern about how the Applicant will demonstrate compliance with the conditions of their permit. Commenters ask who will ensure compliance with the permit. Commenters asks about the consequences of violating the terms of the permit. Commenters are concerned that the Applicant can just pay a fine if they are found to be out of compliance and then be allowed to continue to operate. Carl Kalbfleisch asks if there would be a public record of the monitoring conducted at the proposed plant. Jim Schermbeck commented that the rules of the TCEQ mean nothing these days because they are not enforced.

(Faith Barrett, Ashley Beck, Francis Beck, Emily Brooks, Tiffany Broyles, Linda Carol Crain, Bruce Dawsey, Deirdre Diamond, Kathleen Dophied, Rachel Grooms, Scott Horner, Billie Charels Ingram, Liberty Johnson, Carl Kalbfleisch, Terri Langford, Crystal Lawson, Julie Lenicek, Sarah Newtown, Duncan C. Norton, Jeff Overstreet, Jim Schermbeck, Lari Alexis Taylor-Baker)

RESPONSE 19: Special conditions have been included as part of the proposed permit to ensure the Applicant can demonstrate compliance with the emission limitations set forth in the permit. Emissions will be monitored by the following methods:

All baghouses/dust collectors: Each is subject to daily pressure drop readings. All baghouse capture systems will be subject to monthly inspections to ensure that they are free of holes, cracks, or other conditions which could reduce their capture efficiency. Monthly opacity/visible emission checks are required for all baghouses. The Finish Mill Baghouse Stack (EPN 51-SK-250) will be required to have a daily visible emissions/opacity observation.

Kiln: A Continuous Parametric Monitoring System (CPMS) is required for monitoring of PM. Continuous Emissions Monitoring Systems (CEMS) are required for O₂, SO₂, CO, NO_x, THC (as a surrogate for VOC), NH₃, and Hg.

Kiln Dry Scrubbing System: Monitoring for this system will be required to be established with an as-built amendment prior to start of operations.

Ammonia fugitives: Audio Visual and Olfactory checks are required once every 24 hours (28AVO) and monthly property line visual emission observations are required. Stack testing will be utilized to validate kiln emission rates and monitoring.

The permit holder is also required to maintain records to demonstrate compliance. Records must be made available upon request to representatives of the TCEQ, EPA, or any local air pollution control program having jurisdiction.

As required for any major source, the Regional Office is required to perform periodic investigations of the plant. The investigation may include an inspection of the site including all equipment, control devices, monitors, and a review of all calculations and required recordkeeping. The TCEQ evaluates all complaints received. If a facility is found to be out of compliance with the terms and conditions of its permit, it will be subject to investigation and possible enforcement action. Individuals are encouraged to report any concerns about nuisance issues or suspected noncompliance with terms of any permit or other environmental regulation by contacting the TCEQ Dallas/Fort Worth Regional Office at 817-588-5800 or by calling the 24-hour toll-free Environmental Complaints Hotline at 1-888-777-3186.

Citizen-collected evidence may be used in such an action. *See* 30 TAC § 70.4, Enforcement Action Using Information Provided by Private Individual, for details on gathering and reporting such evidence. Under the citizen-collected evidence program, individuals can provide information on possible violations of environmental law. The information, if gathered according to agency procedures and guidelines, can be used by the TCEQ to pursue enforcement. In this program, citizens can become involved and may eventually testify at a hearing or trial concerning the violation. For additional information, see the TCEQ publication, "Do You Want to Report an Environmental Problem? Do You Have Information or Evidence?" This booklet is available in English and Spanish from the TCEQ Publications office at 512-239-0028 and may be downloaded from the agency website at <http://www.tceq.texas.gov> (under Publications, search for document number 278).

Violations are usually addressed through a notice of violation letter that allows the operator a specified period of time within which to correct the problem. The violation is considered resolved upon timely corrective action. A formal enforcement referral will be made if the cited problem is not timely corrected, if the violation is repeated, or if a violation is causing substantial impact to the environment or neighbors. In most cases, formal enforcement results in an agreed enforcement order including penalties and technical requirements for corrective action. Penalties are based upon the severity and duration of the violation(s). Violations are maintained on file and are included in the calculation of a facility and a person's compliance history. Compliance history ratings are considered during permit application reviews.

Records of monitoring are maintained by the permit holder and can be included in TCEQ investigations. There is no requirement that permit holders make their records available to the public.

COMMENT 19: Emergency / Evacuation / Disaster Review / Upset Event

Commenters expressed concern about the safety of the facility. Commenters ask how neighbors would be notified in the case of an accident and whether there is an evacuation plan. Commenters expressed general concern with regard to potential upset events. Commenters expressed concern that the facility would store and handle ammonia, questioning why a disaster review was not required to be submitted as part of the application. Commenters expressed concern that local firefighters and emergency response would not be able to accommodate the proposed plant in the event of an emergency. Karla McDonald commented that the City of Howe services Dorchester for fire and EMS needs, stating that they do not have the equipment or manpower to ensure proper safety of the proposed plant. Crystal Lawson expressed concern about remediation when control technologies fail.

(Janice Akins, Paula A. Cavender, Shane Cavender, Jeremy Q. Devore, Judith S. Dryden, Chloe Grooms, Joshua Grooms, Billie Ingram, Suzanna Dryden Jensen, William Landrum, Terri Langford, Karla McDonald, Steve Miller, Emily Powell, Kathy Raner, Justin Neal Raner, Russell Rutherford, Jim Schermbeck, Marci Schnitker, David Smith, Wendy Smith, Chandler Strawn, Mark Vodry, Kimberly Vodry)

RESPONSE 19: The TCEQ takes your health and environmental concerns seriously. The proposed permit meets all federal and state regulatory requirements and is protective of human health and the environment. If you have been adversely impacted by emissions from the facility, you may file a complaint with the TCEQ Dallas/Fort Worth Regional Office at 817-588-5800 or by calling the 24-hour toll free Environmental Complaints Hotline at 1-888-777-3186).

In the event of an emergency, the Local Emergency Planning Committee and the regulated entity have the primary responsibility of notifying potentially impacted parties regarding the situation. In addition, as set forth in 30 TAC § 101.201(a), regulated entities are required to notify the TCEQ regional office within 24 hours of the discovery of releases into the air and in advance of maintenance activities that could or have resulted in excess emissions.

Proposed projects which involve toxic chemicals that are known or suspected to have potential for life threatening effects upon off-facility property in the event of a disaster and involve manufacturing processes that may contribute to the potential for disastrous events, may require a disaster review for the application. A Risk Management Plan (or Disaster Review) is required for all chemicals meeting the requirements of 40 CFR Chapter 68. While the application did represent that the proposed facility will store and handle quantities of ammonia, the represented quantities were below the respective thresholds identified in 40 CFR Chapter 68.130(b); therefore, this application did not require a disaster review. See [Disaster Review Fact Sheet \(texas.gov\)](https://www.texas.gov/disaster-review-fact-sheet) and <https://www.ecfr.gov/current/title-40/chapter-I/subchapter-C/part-68/subpart-F>.

Accordingly, the draft permit's MAERT lists the only emissions authorized to be emitted from the proposed project. The TCEQ defines an upset event as an unplanned or unanticipated occurrence or excursion of a process or operation that results in an unauthorized emissions of air contaminants. An upset event that results in unauthorized emissions from an emission point is an emissions event. If an upset occurs, the permit holder must comply with the requirements in 30 TAC § 101.201 regarding the recording and reporting of emission events. If the permit holder fails to report in accordance with 30 TAC § 101.201, the commission may initiate enforcement action for failing to report the underlying emissions event itself. Emissions from historical unplanned emission events or upsets are not included in the impact analysis as the NSR permit does not authorize upset events.

COMMENT 20: Expedited Permitting

Commenters expressed concern regarding expedite review. Commenters expressed concern that the permit application was expedited, stating that the project requires closer scrutiny. Crystal Lawson asks what allows the permit to be processed in an expedite manner.

(Crystal Lawson, Marci Schnitker)

RESPONSE 20: Any applicant may request to have their application expedited. TCEQ will expedite the review of the application if the applicant can demonstrate eligibility under 30 TAC § 101.600 and remits the appropriate fee. Expedited applications undergo the same level of scrutiny and review as non-expedited applications and follow all air permitting process requirements. Further, the public notice requirements and the duration of the public notice comment period is the same for both expedited and non-expedited projects. The economic benefit analysis is not part of the administrative or technical review and does not impact the issuance of a permit.

COMMENT 21: Location / Zoning

Commenters expressed concern regarding the location of the facility as it relates to current zoning ordinances and the proximity to residential and public areas, including but not limited to schools, churches, daycares, homeschools, public areas, residences, ranches, farms, tribal lands, an airport, food industries, as well as nearby tech, semiconductor, and chip manufacturing facilities in the area. Commenters expressed specific concerns regarding the potential impact on the nearby airport, including hazards to air navigation, takeoff and landing procedures, pilot safety, obstructions due to structure heights, and ask that Federal Aviation Administration (FAA) regulations be taken into consideration. Commenters are concerned that there are already other concrete plants in the area, stating that they don't want another. Commenters also questioned whether the area was properly zoned for the operation of such a plant or if it should be located in an industrial zoned area, not near homes. Commenters expressed that the proposed plant should be located somewhere else. Multiple commenters state that they are too old to relocate. Judy Searcy Dryden commented that a bordering landowner should not have an effect on the land use of the neighboring property. Jeremy Q. Devore questioned the proposed location as it relates to the 440-yard distance requirements.

(Representative Reggie Smith, Group A, Randy Adams, Janice Akins, Samantha Allison, Luz Arce, Amber Armendariz, Ralph Armstrong, Art Arthur, Charles Ashley, Amy Ashlock, Andrea Paulette Aslam, Sesily Babekuhl, David Baca, Keith Baehmann, Cynthia Baker, Willies Carl Ballou, Debra Banks, Douglas Glenn Banner, Kelly Denise Barnes, Darla Barr, Kathy Bartlett, Robert Bauer, Heather Beaver, Nelson Beaver, Ashley Beck, Francis Beck, Jennifer Beecroft, Blake C. RESPONSE 21: The TCEQ does not have jurisdiction to consider plant location choices made by an applicant when determining whether to approve or deny a permit application, unless a statute or rule imposes specific distance limitations that are enforceable by the TCEQ. Zoning and land use are beyond the authority of the TCEQ for consideration when reviewing air quality permit applications and such issues should be directed to local officials. Citizens concerned about land use and zoning ordinances should contact city, county, or local zoning officials. The issuance of an air quality authorization does not override any local zoning requirements that may be in effect and does not authorize an applicant to operate outside of local zoning requirements.

The TCEQ Dallas/Fort Worth Regional Office conducted a site review of the area on December 3, 2021. According to that site review, nuisance/odor potentials were high. The review also described the surrounding land use as agricultural, stating that “a church, a business, and approximately five rural residential properties are located along the Site’s property line. The rural town of Dorchester is located south of the Site.” The site review documented the nearest off-property receptor is a business (Texas Aero Sport) approximately 500 feet away. The distance from the facility to the nearest property line, according to the site review, is approximately 200 feet. The site review documented the following: “The Site is a new site; therefore, there were no actual emission points to measure from. Distances obtained for this site assessment were based on the representations included on the proposed site and plot maps.

According to these maps, the Site's operations will be located near a church, a business, and rural residential properties. The impact of potential nuisance conditions affecting these sensitive receptors should be considered." The recommendation of the Regional Office was to proceed with the permit review and the site review indicated no reasons to deny the permit application. Please *see* Response 1 for information about the air quality and health effects.

Although TCEQ cannot consider zoning or land use, the TCEQ does conduct a health effects review to ensure that there will be no adverse impacts to human health and welfare. As described in Response 1, a protectiveness review was conducted for all contaminants emitted. The maximum concentrations were evaluated at the property line, at the nearest off-property receptor, and at any schools located within 3,000 feet of the proposed facilities and found to be protective of human health and the environment.

The TCAA prohibits a concrete crusher from being located within 440 yards of a residence, school, or place of worship. The proposed permit is to obtain authorization for a cement kiln, not a concrete crusher; therefore, the 440-yard distance requirements are not applicable. There is no proposed concrete crusher as part of this application and the TCEQ cannot deny this air permit based on plant location.

COMMENT 22: Noise and Light Pollution / Operating Hours

Commenters expressed concern about noise and light pollution from the proposed project and cited noise ordinances in the area. Commenters are concerned about noise from the plant, stating that it will disrupt church services. Several commenters stated that they moved to the area for peace and quiet and to get away from the city noise. Commenters asked about the operating hours of the plant and expressed concern that operations would occur 24 hours a day, 7 days a week. Commenters expressed concern that overnight operations are not suitable for the nearby residential areas, state that noise levels would interrupt their everyday lives, and are concerned that noise and light pollution will keep them up at night. Manual Watson asks about the sound level from the operating equipment. Jeremy Devore questioned whether the plant would be able to operate 8,760 hours per year.

(Group A, Novin Abdi, Art Arthur, Andrea Paulette Aslam, Sesily Babekuhl, Keith Baehmann, Cynthia Baker, Willies Ballou, Willies Carl Ballou, Heather Beaver, Ashley Beck, Francis Beck, Blake C. Beeson, Cliff Blackstock, Nancy Bond, Nolan E. Bond, Laffel Brown, Nancy Brown, Tiffany Broyles, Jamie Buckalew, Veronica Calzada, Clint Catching, Adam Cernero, Kristin Chandler, Lee Collins, Meghan Cone, R. D. Cozad, Skyler Cozad, Camryn Craddock, Brian Culp, Kristen Cunningham, Bruce W Dawsey, Thomas G. Debner, Jeremy Devore, Jeremy Q. Devore, Jeremy W. Devore, Kathleen Dophied, Leslie M. Dulack, Michael Joseph Elliott, William Engle, Adam Fleming, William Foster, Chris Gardner, Rex Glendenning, Lora Gordon, Richard Oran Gross, Teresa M. Hall, Ginger Ham, Matt Hardenburg, Moses Hejny, Moses Henjy, Sarah Henry, Donna Hepner, Amy Hertel, Melissa Hill, Robin A Horner, Alice Hughes, Debbie Hurd, Phyllis D. James, Michael Jefferson, Debbie Elaine Judkins, Cynthia J. Kaleri, James Kimbrel, Laura L. King, Geri V. King, Ken King, Peggy Klas, Detra Klas, Vanetta Klok, Anthony J. Kordosky, Cindy Kvaal, Julie Lanicek, Victor Lissiak, Eric Lunde, Brian Mai,

Rickey J. Malta, George Mason, Catherine Matuella, Dusty Wayne Mayer, Traci McCarthy, Les McConnell, Amy Meyer, Davida Miorin, Mehrdad Moayed, Grover Franklin Moore, Brad Morgan, Mary Morgan, Jason Morin, Karen Murphy, Rick Myer, Mitaj Nathwani, Sharon Nelson, Danny Thomas Nichols, Chris Nicoloff, Marie Nixon, Margie Noel, Duncan C. Norton, Bonita L. Overbey, Bobby N. Overbey, Jeff Overstreet, James Parrish, Lindsay Price, Delfina Prisock, Patsy A. Reeves, Kevin Diaz Reyes, Cindy Risk, Naif Risk, Joy Roberts, Jennifer Rollins, Brian Russell, Linda Sue Russell, Carrie Saindon, Bradley J. Schnitker, Mary J. Scott, Rosa Shelton, David Smith, Sara Sprinkle, Penny Stahl, Robert Stewart, Shirley Stewart, Stephanie Strawn, James Sutherland, Kenneth Svehlak, Sue Svehlak, Griffin Tammy, Thomas L. Taylor, Thomas Leland Taylor, Cristi Tenant, Julie Travis, Diana Vanbuskirk, Betty Jean Taylor, Bihfang Wang, Brian Wang, Bihfang Wang, Manual Watson, Shelbie Watts, Rudy Weems, Jeff Whitmire, Kevin Wilson, Rebecca Zey, Tracie Zweifel-Gibson)

RESPONSE 22: The TCEQ does not have authority under the TCAA to consider noise or light pollution when determining whether to approve or deny a permit application. The TCEQ also does not have authority under the TCAA to require or enforce any noise abatement measures. Noise ordinances are normally enacted by cities or counties and enforced by local law enforcement authorities. Commenters should contact their local authorities with questions or complaints about noise.

The TCEQ does not have the authority to regulate the hours of operations of a facility or site if the permit review demonstrates all applicable federal and state regulations are met. Accordingly, TCEQ cannot limit the hours of operation unless an emission rate is dependent on a limit on operational hours or there are issues associated with the air quality analysis that require the limitation. As described in Response 1, the protectiveness review conducted conservatively assumes a 24 hour per day operating schedule and determined that emissions are protective. The Applicant represented operations up to 8,760 hours per year. Applicants are bound by the representations in their applications including work hours.

COMMENT 23: Traffic / Trucks / Roads / Vehicular Safety / Infrastructure

Commenters expressed concern about increased traffic of cars and trucks as a result of the proposed project. Commenters expressed concern that the plant would increase truck traffic, traffic congestion, and road hazards. Commenters expressed concern concerned about truck emissions, spillage of debris from trucks, impacts to road safety, the increased potential for vehicular accidents, negative impacts to public infrastructure, and damage to roads. Several commenters are concerned that the roads are not designed for the large trucks, specifically the weight and volume of the heavy equipment that will service the plant.

(Group A, Luz Arce, Ralph H. RESPONSE 23: The Applicant is prohibited by TCEQ rule (30 TAC § 101.5) from discharging air contaminants, uncombined water, or other materials from any source which could cause a traffic hazard or interference with normal road use. If the sources are operated in compliance with the terms and conditions of the permit, nuisance conditions should not occur. Individuals are encouraged to report any concerns about nuisance issues or suspected noncompliance with terms of any permit or other environmental regulation by contacting the TCEQ Dallas/Fort Worth Regional Office at 817-588-5800 or by calling the 24-hour toll-free Environmental Complaints Hotline at 1-888-777-3186. If the facility is found to be out of compliance with the terms and conditions of the permit, it may be subject to possible enforcement action.

Although TCEQ rules prohibit creation of a nuisance, the TCEQ does not have jurisdiction to consider traffic, road safety, or road repair costs when determining whether to approve or deny a permit application. In addition, trucks are considered mobile sources, which are not regulated by the TCEQ. The TCEQ is also prohibited from regulating roads per the TCAA § 382.003(6) which excludes roads from the definition of "facility."

Similarly, TCEQ does not have the authority to regulate traffic on public roads, load-bearing restrictions, and public safety, including access, speed limits, and public roadway issues. These concerns are typically the responsibility of local, county, or other state agencies, such as the Texas Department of Transportation (TxDot) and the Texas Department of Public Safety (DPS).

COMMENT 24: Quality of Life / Aesthetics / Property Values

Commenters expressed concern about the effect of the proposed project on their quality of life, on the aesthetics of the area, and on their property and land values, and taxes. Commenters stated they moved to the area for a better quality of life, clear and cleaner air, peace and quiet, and country living. Commenters expressed concern that their quality of life would be impacted and that they would no longer be able to enjoy outdoor activities. Commenters expressed concern that the proposed plant would negatively impact their property values and the marketability of their homes.

(Group A, Silvia Adams, Randy Adams, Janice Akins, Ralph H. Whitfield, Jeff

Whitmire, Jim Whitten, Carolyn Wildman, Teresa Wildman, Kevin Wilson, Krista Lucas Wynn, Angela Zarallo, Rebecca Zey, Gary Schnitker, Kaaren J. Teuber, Nancy Jan Shaw)

RESPONSE 24: The TCEQ does not have the jurisdiction to consider potential effects from plant location, aesthetics, zoning and land use issues, or effects on property values when determining whether to approve or deny this air permit.

COMMENT 25: Quarry / Mining / Blasting / Construction Emissions

Commenters expressed concern about the emissions and impacts from associated quarry, mining and blasting operations and request that these operations be included as part of the permit application. Commenters expressed concern that the proposed operations would cause sinkholes, leave craters in the ground, or make the land collapse. Commenters expressed concern that a mine or quarry is not considered in the application or modeling submittal. Commenters are concerned about potential seismic waves and blasting from the proposed project, as well as the potential to damage surrounding schools, buildings, oil leases, production and manufacturing facilities, and landowners nearby. Commenters expressed specific concern that blasting operations would have a detrimental impact on nearby tech, semiconductor, and chip manufacturing facilities that have already invested in the area. Judy Searcy Dryden commented that not including the mining/quarry pollution effects should be an infraction of the State and Federal Clean Air and Clean Water Laws.

(Group A, Silvia Adams, Art Arthur, Sesily Babekuhl, Willies Carl Ballou, Ashley Beck, Francis Beck, Gary Bennett, Lander Bethel, Nancy Brown, Tiffany Broyles, Clint Catching, Andrew Cellars, Adam Cernero, Kristin Chandler, Karla K. Colwell, Meghan Cone, Camryn Craddock, Amanda Crawford, Tracy R. Curry, Wes Davidson, Cynthia L. Davis, Bruce W. Dawsey, Thomas G. Debner, Jeremy Q. Devore, Jeremy W. Devore, Judy Searcy Dryden, Judith S. Dryden, Mark L. England, Adam Fleming, Harold C. Foster, Rex Glendenning, Donald E. Godwin, Austin Grooms, Matt Hardenburg, Patricia Hedrick, Lisa Hejny, Melissa Hill, Amy Hoffman-Shehan, Gabe Howell, Phyllis D. James, Suzanna Dryden Jensen, Debbie Elaine Judkins, James Kimbrel, Ken King, Geri V. King, Vanetta Klok, Anthony J. Kordosky, Rick Kvaal, Cindy Kvaal, Chris Landino, William Landrum, Julie Lanicek, Wayne Lee, Christopher A. Lopez, Eric Lunde, Ronald Clay Lynch, Steve Marum, Dusty Wayne Mayer, Traci McCarthy, Larry McDonald, Karla McDonald, Davida Miorin, Mehrdad Moayedi, Brad Morgan, Mary Morgan, Jason Morin, Mitaj Nathwani, Paul Nixon, Brent E. Omdahl, Bobby N. Overbey, Sherry Perrin, David Plyler, Delfina Prisock, Kathy Raner, Justin Neal Raner, Kevin Diaz Reyes, Mona Robnett, Linda Russell, Carrie Saindon, Betty Scott, Doreen Shacklee, Kent Sharp, Sharon Slaughter, David Smith, Wendy Smith, Reggie Smith, Darlene L. Smith, Cynthia Annk Spencer, Drew Springer, Robert Stewart, Shirley Stewart, Alice Faye Stewart, Chandler Strawn, Sathappun Subbiah, Kenneth Svehlak, Sue Svehlak, Thomas L. Taylor, Thomas Leland Taylor, Shawn C. Teamann, Cristi Tenant, Tonya Troxtell, Jay Dee Voto, Leonard G. Waldrum, Leonard G. Waldrum, Manual Watson, Wyatt Watson, Jeff Whitmire, Kevin Wilson, Rebecca Zey, Tracie Zweifel-Gibson, April Williams, Kaaren J. Teuber, Renata Richardson, Robin Sears)

RESPONSE 25: The TCEQ does not have jurisdiction to regulate mines, quarries, or associated blasting. Mines and quarries are specifically excluded from the definition of

facility in the TCAA § 382.003(6). Concerns regarding noise and vibrations should be directed to local officials.

Emissions of PM from the quarry, however, cannot create a nuisance condition. The Applicant must comply with the TCAA and all TCEQ rules and regulations, including 30 TAC § 101.4, which prohibits a person from creating or maintaining a nuisance. The TCEQ also does not have authority under the TCAA to regulate emissions from mobile sources. Construction equipment such as bulldozers and portable generators are considered mobile or non-road sources. However, TCEQ does require owners and operators to comply with 30 TAC § 101.4 which prohibits a person from creating or maintaining a condition of nuisance such as interference with the normal use and enjoyment of property. Individuals are encouraged to report any concerns about nuisance issues by contacting the TCEQ Dallas/Fort Worth Regional Office at 817-588-5800 or by calling the 24-hour toll-free Environmental Complaints Hotline at 1-888-777-3186.

COMMENT 26: Effect on Local Economy and Other Industries

Commenters expressed concern about the effects this project could have on the local economy and business in the area. Commenters expressed concern that the proposed plant would hinder residential and commercial growth in the area. Commenters expressed concern that the nearby tech, semiconductor, and chip manufacturing facilities have already invested money in the area, and that the proposed project would be detrimental to these existing businesses.

(Janice Akins, Art Arthur, Keith Baehmann, Willies Carl Ballou, Robert Bauer, Blake C. Beeson, Emily Brooks, Jeffrey Brown, Sarah Campbell, Tommy Joe Carney, Clint Catching, Adam Cernero, Meghan Cone, Stephanie Davidson, Wes Davidson, Julie Davis, Bruce W. Dawsey, Bruce Dawsey, Jeremy Devore, Mary Gail Devore, Mark L. England, Barrett Fannin, Tracy Gilbert, Donald E. Godwin, Austin Grooms, Chloe Grooms, Joshua Grooms, Dave Hammond, Matt Hardenburg, Jim L. Harvey, Lisa Hejny, Sarah Henry, Gabe Howell, Meghan Hughes, Mandy Hummel, Phyllis D. James, Suzanna Dryden Jensen, Liberty Johnson, Geri V. King, Ken King, Debbie Kirkpatrick, Vanetta Klok, Amanda Lambert, Julie Lanicek, Mary Little, Trudy Lucas, Eric Lunde, Brian Mai, Casey Mandi, Steve Marum, Catherine Matuella, Traci McCarthy, Kathleen McClure, Garrett McCown, Vivian Robin McCoy, Karla McDonald, Larry McDonald, Michael J. Mitchusson, Joyce L. Moore, Angela Moreau, Brad Morgan, Marthann Morrow, Paul Nixon, Rose Marie Nixon, Andrew Wallace Olmstead, Brent Omdahl, Brent E. Omdahl, Jeff Overstreet, Tyler Overstreet, Nikolaus Owen, David Plyler, Joshua D. Price, Lindsay Price, Kathy Raner, Justin Neal Raner, Mona Robnett, Linda Russell, Russell Rutherford, Shannon Ryan, Kent Sharp, True Shaw, David Shepard, David Smith, Reggie Smith, Derek Smith, Michael Wayne Speed, Julia Spencer, Drew Springer, Kristy Stachmus, Shawn C. Teamann, Tonya Troxtell, Gail W. Utter, Diana Vanbuskirk, Marilyn Sue Vest, Mark Vodry, Kimberly Vodry, Jaymison Bella Voto, Paula Walker, Jacqueline Wassom, Wyatt Watson, Jeff Whitmire, Ruth E. N. Cox Williamson, Kevin Wilson, Krista Lucas Wynn, Angela Zarallo, April Williams, Nancy Jan Shaw, Robin Sears, Sara Salinas)

RESPONSE 26: Issues related to the local economy are outside the scope of review of an air quality permit. The Executive Director has reviewed the permit application in accordance with the applicable law, policy, and procedures, in accordance with the

agency's mission to protect our state's human and natural resources consistent with sustainable economic development. If an applicant meets the requirements for an air quality permit, the TCEQ must grant the permit.

COMMENT 27: Mental Health and Financial Well-being

Joyce L. Moore expressed concern about the mental and financial well-being of the people in the area due to the proposed plant. Jeremy W. Devore expressed concern regarding the negative impact on mental health, emotions, and possible PTSD triggers due to the proposed plant. Ja Dee Voto commented that the proposed plant would cause emotional distress. Gabrial Williams commented that the proposed plant would cause mass psychogenic illnesses and negatively impact mental health. Amber Bratt commented that the proposed plant would take an emotional toll on nearby residents.

(Amber Bratt, Jeremy W. Devore, Joyce L. Moore, Jay Dee Voto, Gabriel Williams, Robin Sears)

RESPONSE 27: The TCAA does not give the TCEQ authority to regulate air emissions beyond the direct impacts (inhalation) that the air emissions have on human health or welfare. In addition, the TCAA specifically address air-related issues. This permit, if issued, would regulate the control and abatement of air emissions only.

COMMENT 28: Corporate Profits

Commenters expressed concern regarding the company profits made from the proposed project at the expense to the surrounding community.

(Debra Banks, Tonya Bingham, Tiffany Broyles, Brenna Butler, Andrew Cellars, Linda Carol Crain, Lindsay Cummings, Karen Cummings, Karen L. Cummings, Sherry Duran, Michael Joseph Elliott, Adam Fleming, Connor Gillispie, Brandon Grooms, Rachel Grooms, Melissa Hill, Suzanna Dryden Jensen, Kylee Likarish, Patrick Neal McNutt, Bonita L. Overbey, Betty Scott, Leann Smith, Penny Stahl, Meghan Swindle, Mickinze Vanherpen, Jeff Whitmire, Teresa Wildman)

RESPONSE 28: The TCEQ is not authorized to consider a company's financial status nor its profits in determining whether a permit should be issued. TCEQ's review of this company's application included analysis of health impacts and application of best available control technology (BACT), and based on this review, the facility should comply with all applicable health effects guidelines and emission control requirements. Continued compliance with health effects guidelines and BACT requirements is expected if the company operates in compliance with the permit terms and conditions. Individuals are encouraged to report any environmental concerns at the facility by contacting the TCEQ Dallas/Fort Worth Regional Office at 817-588-5800 or by calling the 24-hour toll-free Environmental Complaints Hotline at 1-888-777-3186. The TCEQ evaluates all complaints received. If the facility is found to be out of compliance with the terms and conditions of the permit, it will be subject to possible enforcement action.

COMMENT 29: TCEQs Responsibility to the Community / General Opposition / Support

Commenters asked that the TCEQ consider residents and their wishes and choose not to approve the permit registration for the proposed plant. Commenters express general opposition to the proposed plant. Commenters ask that the TCEQ uphold their mission statement. Judy Searcy Dryden expressed concern that the TCEQ would approve the permit just to allow the Applicant 'the ability to stay competitive,' further stating that the Agency should be protecting the safety of Texans and assuring plants are using best management practices. Tyler and Shelby Overstreet submitted a petition of signatures expressing general opposition. Willies Carl Ballou commented that the State of Texas needs to protect its citizens and not get paid off by questionable groups. Donald Ray Cummings commented that TCEQ will be the ones to blame for turning the area into an environmentally unhealthy industrial blight. Peter Christensen and Donald Bailey expressed general support for the proposed project.

(Group A, Group B, Novin Abdi, Silvia Adams, Randy Adams, Janice Akins, Samantha Allison, Amber Armendariz, Ralph Armstrong, Katrina Lynn Arsenault, Art Arthur, Charles Ashley, Sesily Babekuhl, Keith Baehmann, Donald Bailey, Willies Carl Ballou, Douglas Glenn Banner, Kelly Denise Barnes, Laura Barnett, Thomas Clay Barnett, Darla Barr, Faith Barrett, Kathy Bartlett, Mark Baumgardner, Heather Beaver, Jennifer Beecroft, Blake C. Warren, Jared Weaver, William Webster, Rudy Weems, Cynthia Weems, Cynthia L. Weems, Casey Weinmann, Monique Whaley, Steve Whaley, Joseph White, Edward Whitfield, Monica L. Whitfield, Jennifer Williamson, Jeffrey Wilmoth, Kevin Wilson, Matt R. Yamarino, Angela Zarallo, Tracie Zweifel-Gibson, Austin Sumrall, Cynthia Zinn, Erica Ross, Jennita Wingate, John Harrison, Lainie Ramsay, Renata Richardson, Robert Sanchez, Robin Sears, Terry Rainbow, Susan Powell, Angela Onley, Borming Wang, Kenneth J. King, Sara Salinas, Elizabeth Rocamontes)

RESPONSE 29: The TCEQ appreciates the comments and interest from the public in environmental matters before the agency and acknowledges the comments in opposition and support of the project. The TCAA establishes the TCEQ's jurisdiction to regulate air emission in the state of Texas. Accordingly, the Executive Director's staff has reviewed the permit application in accordance with the applicable state and federal law, policy and procedures, and the agency's mission to protect the state's human and natural resources consistent with sustainable economic development. The TCEQ cannot deny authorization of a facility if a permit application contains a demonstration that all applicable statutes, rules, and regulations will be met.

COMMENT 30: Miscellaneous / Comments to the Applicant

Commenters expressed general concern that the proposed plant would impact national security. Multiple commenters referenced a letter to the TCEQ from Lieutenant Governor Dan Patick. Commenters commented about an issue involving the High Roller Group. Jerry Dean Hestand asks what the legacy of this facility will be. Lisa Flaggert expressed concern that the company will cause natural disasters. Steve Miller expressed concern about other companies and plants that have had explosions in the past. Several commenters asked about the impact to the electrical grid. Katerina Hess

states they don't need any more environmental favors from the government. Several commenters provided comments that were religious in nature. Several commenters raised concerns about criminal activity. Robert Bauer commented that plants should not be allowed to sneak in the back door because existing laws are insufficient to stop it. Several commenters asked about involvement from other state and federal agencies. J. Renfro expressed concern regarding various superfund sites in Texas. Linda Carol Crain asks how much money has changed hands to get officials to push the permit through. Delfina Prisock expressed concern about tremors caused by fracking activities. Several commenters raised concerns about monetary compensation to the surrounding community.

David Smith and Sathappun Subbiah expressed concern that the TCEQ does not have a medical professional approving the permit beyond a federal guideline. David Smith asks for access to state funding so that they can 'investigate this power grab in our small community.' Mr. Smith asks that Texas Legislatures work with TCEQ to review requirements for both air and water permits for oversights and other environmental protections. Mr. Smith expressed concern that the proposed plant would block internet and broadband signal. Mr. Smith submitted a copy of a protection of Federal Funds and National Security letter, as well as a letter from the City of Dorchester which opposes all permits requested from the TCEQ, FAA, EPA, and other local, state, and federal government agencies. Mr. Smith requests that the TCEQ require the Applicant to post a bond due to what he states is a potential for interference with administration of the CHIPS Act.

Group A commenters state that the company represented themselves to the community as a small business. Robin Sears asks if Oklahoma residents have been involved in the process. Matthew Petz asks if anybody has been compensated for their vote. David G. Sileven asks how impacted citizens could seek legal action

(Group A, Robert Bauer, James Matt Cooper, Linda Carol Crain, Atul Dave, Wes Davidson, Bethany Devore, Deirdre Diamond, Judy Searcy Dryden, Judith S. Dryden, Michael Fannin, Lisa Flaggert, Kit Grice, Austin Grooms, Ginger Ham, Katerina Hess, Jerry Dean Hestand, Laura T. Hunt, Suzanna Dryden Jensen, Ken King, Geri V. King, Julie Lanicek, Les McConnell, Vivian Robin McCoy, Steve Miller, Sarah Myrick, Brent E. Omdahl, Jeffrey Tyler Overstreet, Jeff Overstreet, Zach Poling, Lindsay Price, Ray H. Purdom, J. Renfro, Marci Schnitker, David Smith, Sathappun Subbiah, Becky Vincent, Mark Vodry, Manual Watson, Angela Zarallo)

Comments to the Applicant

Judy Searcy stated that any experienced or responsible applicant should know accuracy matters for an application, and that being careless raises red flags that misinformation could be intentional to draw less attention to the permit request and avoid close scrutiny by the TCEQ. Michael Fannin asks the Applicant to withdraw their application. Don Horn asks the Applicant why they bought over 600 acres of land. Jim Schermbeck asks about future ownership plans of the company and future operations.

Lari Alexis Taylor-Barker expressed concern regarding representations on the Applicant's website, asking how they will reduce their carbon footprint, commenting that the website lacks a detailed plan beyond praising Texas and vague promises to minimize pollution, and asks how the Applicant will fulfill their website claims. Ms.

Taylor-Barker asks the Applicant has a dedicated research and development team to explore innovative technologies to differentiate themselves from other cement plants.

David Smith expressed concern that the Applicant may have the intention to sell their construction permit. Mr. Smith asks the Applicant what they will do if they are unable to comply with the total hydrocarbon and organic hazardous air pollutant limits found in the draft permit. Mr. Smith asks the Applicant if they will commit to never pursue a permit for burning waste. Mr. Smith asks the Applicant where else in the application the Applicant made 'generous assumptions' in estimating their emissions.

Manual Watson commented that a public announcement from the company detailing the operating plans has not been made. Cynthia Reyes commented that if the project was a good idea, the town would have been notified by the company themselves.

(Michael Fannin, Don Horn, Liberty Johnson, Jim Schermbeck, Judy Searcy, David Smith, Lari Alexis Taylor-Baker, Manual Watson, Cynthia Reyes, Robin Sears, Matthew Petz, Kaaren J. Teuber, David G. Sileven)

RESPONSE 30: These comments are either outside the scope of the air permit review or addressed to the Applicant and are therefore included for completeness but not addressed by the Executive Director as they are not within the scope of this air permit review.

CHANGES MADE IN RESPONSE TO COMMENT

No changes to the draft permit have been made in response to public comment.

Respectfully submitted,

Texas Commission on Environmental Quality
