# 1 INTRODUCTION

Under the 2008 eight-hour ozone National Ambient Air Quality Standard (NAAQS), the Houston-Galveston-Brazoria (HGB) 2008 eight-hour ozone nonattainment area, consisting of Brazoria, Chambers, Fort Bend, Galveston, Harris, Liberty, Montgomery, and Waller Counties, was previously classified as a serious nonattainment area with a July 20, 2021 attainment date (84 *Federal Register* (FR) 44238, August 23, 2019). Based on 2018, 2019, and 2020 monitoring data, the HGB ozone nonattainment area did not attain the 2008 eight-hour ozone NAAQS in the 2020 attainment year.<sup>1,2</sup> On April 5, 2021, the Texas Commission on Environmental Quality (TCEQ) submitted a one-year attainment date extension request to the United States Environmental Protection Agency (EPA). On October 7, 2022, the EPA published a final notice denying the one-year attainment date extension request and reclassifying the area from serious to severe for the 2008 eight-hour ozone NAAQS, effective November 7, 2022 (87 FR 60926).

Nonattainment areas classified as moderate and above are required to meet the mandates of the FCAA under §172(c)(1) and §182(b)(2) and (f). According to the EPA's *Implementation of the 2008 National Ambient Air Quality Standards for Ozone: State Implementation Plan Requirements; Final Rule* (2008 eight-hour ozone standard SIP requirements rule, 80 FR 12264, March 6, 2015), states containing areas classified as moderate nonattainment or higher must submit a state implementation plan (SIP) revision to fulfill the reasonably available control technology (RACT) requirements for all control techniques guidelines (CTG) emission source categories and all non-CTG major sources of nitrogen oxides (NO<sub>x</sub>) and volatile organic compounds (VOC). This appendix provides the TCEQ's analysis of the sources and the applicable rules to demonstrate that the state is fulfilling the RACT requirements for the HGB area. The major source threshold for severe nonattainment areas is a potential to emit (PTE) 25 tons per year (tpy) or more of either NO<sub>x</sub> or VOC. This analysis evaluates previous RACT requirements for all CTG emission source categories and all non-CTG major sources of NO<sub>x</sub> and VOC. This analysis evaluates previous RACT determinations that EPA approved on March 27, 2015, (80 FR 16291). The HGB area was classified as severe nonattainment under a revoked ozone NAAQS and consequently already meets severe area RACT requirements. Therefore, this SIP revision must contain adopted RACT regulations, certifications where appropriate that existing provisions are RACT, and/or negative declarations that there are no sources in the nonattainment area covered by a specific CTG source category.

RACT is defined as the lowest emissions limitation that a particular source is capable of meeting by the application of control technology that is reasonably available considering technological and economic feasibility (44 FR 53762, September 17, 1979). RACT requirements for moderate and higher classification nonattainment areas are included in the FCAA to assure that significant source categories at major sources of

---

<sup>1</sup> The attainment year ozone season is the ozone season immediately preceding a nonattainment area's attainment date.

<sup>2</sup> An area that fails to attain the 2008 eight-hour ozone NAAQS by its attainment date would be eligible for the first one-year extension if, for the attainment year, the area's fourth highest daily maximum eight-hour average is at or below the level of the standard (75 parts per billion (ppb)); the HGB area's fourth highest daily maximum eight-hour average for 2020 was not greater than 75 ppb as measured at the Conroe Relocated monitor (C78/A321). The HGB area's design value for 2020 was 79 ppb.

ozone precursor emissions are controlled to a reasonable extent, but not necessarily to best available control technology (BACT) levels expected of new sources or to maximum achievable control technology (MACT) levels required for major sources of hazardous air pollutants.

## **2 RACT EVALUATION APPROACH**

### **2.1 General Discussion**

The starting point for this RACT analysis was a review of the EPA's control techniques guidelines (CTG) and alternative control techniques (ACT) Guidance documents. The EPA has issued 46 CTG documents all of which define RACT for VOC emissions from specific source types at existing facilities. The EPA has also issued 30 ACT documents that describe available control technologies and their respective cost analysis. Of the 30 ACT documents 10 pertain to NO<sub>x</sub> emissions, and the remaining 20 ACT documents pertain to VOC emissions. Unlike CTG documents, ACT documents do not define presumptive RACT levels.

A negative declaration can be provided for CTG emission source categories that, based on information available to the TCEQ, either do not exist in the HGB area or exist but do not meet the applicability criteria recommended for controls, e.g., sources with VOC emissions less than the recommended exemption thresholds. The TCEQ submits negative declarations for source categories for which its analyses of the 2019 point and area source emissions inventories, Title V permit database, New Source Review (NSR) permit database, and Central Registry database revealed that there would be no affected sources that would meet the rule applicability or that would be affected by the rule requirements. Table D-1 includes these negative declarations.

The TCEQ demonstrates that the RACT requirements are being fulfilled in the HGB area by identifying:

- all CTG and ACT source categories of VOC emissions and submitting negative declarations for CTG categories where there are no emission sources within the HGB area;
- all ACT source categories of NO<sub>x</sub> emissions;
- all non-CTG major sources of NO<sub>x</sub> and VOC emissions; and
- the state regulation that implements or exceeds RACT for each applicable CTG source category or non-CTG major emission source; and describing the basis for concluding that these regulations fulfill RACT.

### **2.2 Identification of VOC Source Categories Covered by CTG or ACT Documents**

The EPA has issued CTG documents defining RACT for existing facilities. The EPA has also issued ACT documents that describe available control technologies but unlike CTG documents, ACTs do not define presumptive RACT. The TCEQ reviewed the EPA's CTG and ACT documents to identify all source categories of VOC emissions that require RACT. Sources addressed by CTG and ACT documents are grouped into categories based on the type of business processes or operations that result in emissions of VOC. Sources in these categories are typically non-major sources and require RACT determinations because they are subject to a CTG or ACT reference document. RACT determinations for these non-major VOC emission sources are not

required if there are no facilities in the HGB area that are subject to a CTG or ACT document. A negative declaration can be provided for source categories described within the EPA guidance documents that do not exist in the HGB area.

The TCEQ reviewed the EPA's CTG and ACT documents to identify all source categories of VOC emissions that require RACT. Table D-1: *State Rules Addressing VOC RACT Requirements in CTG Reference Documents* lists VOC CTG source categories, its reference document, and state rules addressing VOC RACT Requirements. Table D-2: *State Rules Addressing VOC RACT Requirements in ACT Reference Documents* lists state rules addressing VOC RACT requirements in ACT reference documents.

### **2.3 Identification of NO<sub>x</sub> ACT Source Categories**

The EPA has issued ten ACT documents that describe available control technologies for specific source categories of NO<sub>x</sub>. The TCEQ reviewed these ACT documents to identify all source categories of NO<sub>x</sub> emissions that require RACT analysis. The TCEQ also reviewed all available information from Texas permit by rule permit registrations to identify entities conducting business subject to these ACT documents.

Table D-3: *State Rules Addressing NO<sub>x</sub> RACT Requirements in ACT Reference Documents* provides the emission source categories, the ACT reference documents, and the state rules addressing the RACT requirements for sources in the NO<sub>x</sub> ACT documents.

### **2.4 Identification of Major Sources of NO<sub>x</sub> and VOC Emissions**

A potential to emit (PTE) of 25 tons per year (tpy) major source threshold is being retained for the HGB area. The TCEQ reviewed the 2019 point source emissions inventory, Title V databases, and NSR databases to identify all major sources of NO<sub>x</sub> and VOC emissions. All sources in the Title V database that were listed as a major source for NO<sub>x</sub> or VOC emissions are included in the RACT analysis regardless of the reported actual emissions in 2014. Since the point source emissions inventory database reports actual emissions rather than PTE, the TCEQ used reported actual emissions as low as 10 tpy of NO<sub>x</sub> or VOC as the cutoff to develop a preliminary major source list. The TCEQ further reviewed the maximum allowable emission rate table (MAERT) in the NSR database to determine the PTE for each source on the preliminary major source list. If the actual emissions for a source were over 10 tpy but the MAERT emission rate was less than 25 tpy, and the source is not a major Title V source, the source was excluded.

Tables D-4: *State Rules Addressing NO<sub>x</sub> RACT Requirements for Major Emission Sources in the HGB Area* and D-5: *State Rules Addressing VOC RACT Requirements for Major Emission Sources in the HGB Area* list the NO<sub>x</sub> and VOC major sources and the applicable state rules addressing RACT in the HGB area, respectively. The major source tables provide the emission source regulated entity number (RN), account number, company name, county, Standard Industrial Classification (SIC) code, SIC description of the source, and the reported annual emissions in tpy. The tables also include either the state rules satisfying the RACT requirements, the permit requirements that limit emissions, or the reasoned justification for why controlling the emissions is not considered RACT.

## **2.5 Identifying State Regulations Implemented to Fulfill RACT Requirements**

The VOC regulations are in 30 Texas Administrative Code (TAC) Chapter 115 for the nonattainment areas in Texas. The NO<sub>x</sub> regulations are in 30 TAC Chapter 117. In 2013, the EPA determined that NO<sub>x</sub> control measures in 30 TAC Chapter 117 met RACT requirements for major sources of NO<sub>x</sub> in the HGB area under the one-hour and 1997 eight-hour ozone NAAQS (78 FR 19599, April 2, 2013). The current EPA-approved 30 TAC Chapter 117 rules continue to fulfill RACT requirements for ACT NO<sub>x</sub> source categories that exist in the HGB area. The EPA has fully approved the commission's 30 TAC Chapter 117 NO<sub>x</sub> rules for the HGB area as satisfying RACT under the 2008 ozone NAAQS (84 FR 18145, April 30, 2019).

The EPA also approved the 30 TAC Chapter 115 VOC rule revisions as RACT for all CTG documents issued after 2006 for the HGB area under the 1997 eight-hour ozone NAAQS (78 FR 19599, April 2, 2013; 79 FR 21144, April 15, 2014; 79 FR 45105, August 4, 2014; and 80 FR 16291, March 27, 2015). The EPA determined that VOC RACT is in place for all CTG and non-CTG major sources in the HGB area for the one-hour and 1997 eight-hour ozone NAAQS (71 FR 52676, September 6, 2006; and 79 FR 21144, April 15, 2014). The EPA has fully approved the commission's 30 TAC Chapter 115 VOC rules for the HGB area as satisfying RACT under the 2008 ozone NAAQS (84 FR 18145, April 30, 2019).

Texas does not currently have any outstanding FCAA RACT obligations to fulfill for the one-hour or 1997 eight-hour ozone NAAQS. TCEQ rules that are consistent with or more stringent than controls implemented in other nonattainment areas were also determined to fulfill RACT requirements. Federally approved state rules and rule approval dates can be found in 40 CFR §52.2270(c), EPA Approved Regulations in the Texas SIP.

## **3 RACT Determination and Discussion**

### **3.1 General Discussion**

Under the current state rules, the HGB area is subject to some of the most stringent NO<sub>x</sub> and VOC emission control requirements in the country and for many source categories the existing rules are more stringent than recommended RACT standards for those categories.

### **3.2 NO<sub>x</sub> RACT Determination**

#### **3.2.1 30 TAC Chapter 117 NO<sub>x</sub> Rules**

The 30 TAC Chapter 117 rules represent one of the most comprehensive NO<sub>x</sub> control strategies in the nation. The NO<sub>x</sub> controls and reductions implemented through Chapter 117 for the HGB ozone nonattainment area encompass both RACT and beyond-RACT levels of control for the 1997 eight-hour ozone standard. Except as noted in Section 3.2.2: *Glass Furnace RACT* of this appendix, the current EPA-approved 30 TAC Chapter 117 rules continue to fulfill RACT requirements for ACT NO<sub>x</sub> source categories that exist in the HGB area.

For major NO<sub>x</sub> emission sources for which NO<sub>x</sub> controls are technologically and economically feasible, RACT is fulfilled by existing source-specific rules in TAC 30

Chapter 117 and other federally enforceable measures. Additional NO<sub>x</sub> controls on certain major sources were determined to be either not economically feasible or not technologically feasible.

### **3.2.2 Glass Furnace RACT**

The TCEQ is not implementing any rule amendments or new rules associated with the EPA's Glass Furnace ACT for the HGB area. The TCEQ identified one major source glass manufacturing facility, Longhorn Glass Corporation (TCEQ Account No. HG-0028-R), in the 2019 point source emissions inventory meeting the source category description in the EPA's glass furnace ACT document, *Alternative Control Techniques Document - NO<sub>x</sub> Emissions from Glass Manufacturing*. TCEQ Permit Number 42623 (Special Condition 7B), revised March 2011, requires Longhorn's oxy-fired glass furnace to meet a NO<sub>x</sub> emission specification of 1.48 pounds per ton of glass produced. The level of NO<sub>x</sub> control already installed on the facility meets what the TCEQ considers to be the top end controls for glass furnaces and additional NO<sub>x</sub> control is not possible at this facility. This is consistent with the EPA's ACT document which describes oxy-firing as the most effective NO<sub>x</sub> control technique. This control requirement also surpasses the current 30 TAC Chapter 117 NO<sub>x</sub> emissions specification of 4.0 pounds per ton of glass produced (§117.410(b)(10)) that was adopted by the commission on May 23, 2007, (32 *Texas Register* (TexReg) 3206, June 8, 2007) for the DFW 1997 eight-hour ozone attainment demonstration and approved by the EPA (73 FR 73562, December 3, 2008). Furthermore, there are no other glass furnaces in the HGB area. Therefore, the TCEQ determined that establishing a NO<sub>x</sub> RACT rule for the glass furnace source category was not necessary for fulfilling RACT for the HGB 1997 eight-hour ozone standard attainment demonstration because additional controls were not necessary or possible in this specific situation.

### **3.3 VOC RACT Determination**

#### **3.3.1 30 TAC Chapter 115 VOC RACT Rules**

All VOC emission source categories addressed by CTG and ACT documents that exist in the HGB area are controlled by existing rules in 30 TAC Chapter 115 or other EPA-approved regulations that fulfill RACT requirements. Table D-1 provides the emission source categories, the CTG reference documents, and the state rules addressing the RACT requirements for sources in the VOC CTG documents. Table D-2 provides the emission source categories, the ACT reference documents, and the state rules addressing the RACT requirements for sources in the VOC ACT documents.

A negative declaration is provided for CTG emission source categories that based on information available to the TCEQ either do not exist in the HGB area or exist but do not meet the applicability criteria recommended for controls, e.g., sources with a potential to emit less than the recommended exemption thresholds.

For the HGB area, the EPA has previously approved the following VOC RACT negative declarations (79 FR 21144, April 15, 2014): fiberglass boat manufacturing materials, leather tanning and finishing, surface coating for flat wood paneling, letterpress printing, automobile and light-duty truck assembly coating, rubber tire manufacturing, and vegetable oil manufacturing operations. A major source vegetable oil manufacturing operation was identified in the HGB area during this RACT analysis and

more detailed discussion is provided in Section 3.3.3: *Vegetable Oil Manufacturing Operations*.

For all major VOC emission sources for which VOC controls are technologically and economically feasible, RACT is fulfilled by existing 30 TAC Chapter 115 rules, other federally enforceable measures, and by concurrent revisions to 30 TAC Chapter 115. Additional VOC controls on certain major sources were determined to be either not economically feasible or not technologically feasible.

### **3.3.2 VOC Storage Tank Rule Update**

In 2016, 30 TAC Chapter 115, Subchapter B, Division 1, was revised (Rule Project No. 2016-039-115-AI) to increase the control efficiency of control devices, other than vapor recovery units or flares, from 90% to 95% for VOC storage tanks in the HGB area. In addition to increasing the control efficiency for all storage tanks, the rulemaking enhanced inspection, repair and recordkeeping requirements for major source fixed roof crude oil or condensate storage tanks with the uncontrolled VOC emissions of at least 25 tpy in the HGB area. The amendments also expanded the rule applicability to include the aggregate of crude oil and condensate fixed roof storage tanks at pipeline breakout stations in the HGB area. The EPA approved these rule revisions as addressing VOC RACT for both CTG and non-CTG major source storage tanks in the HGB 2008 eight-hour ozone nonattainment area on April 30, 2019 (84 FR 18145).

### **3.3.3 Vegetable Oil Manufacturing Operations**

Previously, the TCEQ provided a negative declaration for vegetable oil manufacturing operations covered under the EPA's *Control of Volatile Organic Emissions from Manufacture of Vegetable Oils* CTG document (EPA-450/2-78-035, June 1978). However, this CTG was rescinded by the EPA in 1979. In the RACT analysis for the 2016 HGB 2008 Eight-Hour Ozone AD Moderate Classification SIP Revision, the TCEQ identified one major source, Southern Cotton Oil Richmond Facility owned by Archer Daniels Midland (ADM), TCEQ Account Number FG-0003-V, in Fort Bend County. Although this source has been identified, because the CTG was rescinded in 1979, this source category is not required to be addressed to fulfill CTG RACT requirements. Existing 30 TAC Chapter 115 rules do, however, satisfy VOC major source RACT requirements for ADM, and further, would fulfill the requirements detailed in the rescinded CTG. ADM operates a condenser and a mineral oil scrubber (MOS) at a 90 to 95% control efficiency, consistent with the MOS control efficiency recommendation in the CTG, to recover hexane emissions from the extractor main vent and desolventizer toaster. This vegetable oil manufacturing operation is subject to the existing 30 TAC Chapter 115, Subchapter B, Division 2 Vent Gas Control rules, which require that any vent gas stream be controlled with an efficiency of at least 90%. This control efficiency is consistent with both the rescinded CTG recommendation and the EPA-approved RACT requirements for vegetable oil processing operations in the San Joaquin Valley Unified Air Pollution Control District Rule 461.2 (current rule number 4691) (59 FR 2535, January 18, 1994). The EPA approved the TCEQ's analysis that RACT is met for this source on April 30, 2019 (84 FR 18145).

**Table D-1: State Rules Addressing VOC RACT Requirements in CTG Reference Documents**

Emission Source Category	CTG Reference Document	State Regulations Fulfilling RACT Requirements
Bulk Gasoline Plants	Control of Volatile Organic Emissions from Bulk Gasoline Plants (EPA-450/2-77-035, December 1977)	§115.211 - §115.219
Cleaning Solvents	Control Techniques Guidelines for Industrial Cleaning Solvents (EPA-453/R-06-001, September 2006)	§115.460 - §115.469
Cutback Asphalt	Control of Volatile Organic Compounds from Use of Cutback Asphalt (EPA-450/2-77-037, December 1977)	§115.510 - §115.519
Fiberglass Boat Manufacturing Materials	Control Techniques Guidelines for Fiberglass Boat Manufacturing Materials (EPA 453/R-08-004, September 2008)	Negative declaration. No existing sources meeting the CTG category description in HGB area.
Fugitive Emissions	Fugitive Emission Sources of Organic Compounds - Additional Information on Emissions, Emission Reductions, and Costs (EPA-450/3-82-010, April 1982)	§115.352 - §115.359
Gasoline Service Stations	Design Criteria for Stage I Vapor Control Systems - Gasoline Service Stations (EPA450/R-75-102, November 1975)	§115.221 - §115.229
Graphic Arts	Control of Volatile Organic Emissions from Existing Stationary Sources, Volume VIII: Graphic Arts - Rotogravure and Flexography (EPA-450/2-78-033, December 1978)	§115.430 - §115.439
Graphic Arts	Control Techniques Guidelines for Flexible Package Printing (EPA-453/R-06-003, September 2006)	§115.430 - §115.439
Graphic Arts	Control Techniques Guidelines for Offset Lithographic Printing and Letterpress Printing (EPA-453/R-06-002, September (2006)	§115.440-§115.449 Negative declaration for Letterpress. No existing sources meeting the CTG applicability for letterpress printing identified in HGB area.
Industrial Adhesives	Control Techniques Guidelines for Miscellaneous Industrial Adhesives (EPA 453/R-08-005, September 2008)	§115.470 - §115.479

Emission Source Category	CTG Reference Document	State Regulations Fulfilling RACT Requirements
Natural Gas/Gasoline Processing	Control of Volatile Organic Compound Equipment Leaks from Natural Gas/Gasoline Processing Plants (EPA-450/3-83-007, December 1983)	§115.352 - §115.359
Oil and Natural Gas Industry	Control Techniques Guidelines for the Oil and Natural Gas Industry (EPA-453/B-16-001, October 2016)	§115.170 - §115.183
Petroleum Dry Cleaners <sup>3</sup>	Control of Volatile Organic Compound Emissions from Large Petroleum Dry Cleaners (EPA-450/3-82-009, September 1982)	§115.552 - §115.559 Contingency measure.
Surface Coating	Control of Volatile Organic Emissions from Existing Stationary Sources, Volume III: Surface Coating of Metal Furniture (EPA450/2-77-032, December 1977)	§115.420 - §115.429
Surface Coating	Control of Volatile Organic Emissions from Existing Stationary Sources, Volume IV: Surface Coating of Insulation of Magnet Wire (EPA-450/2-77-033, December 1977)	§115.420 - §115.429
Surface Coating	Control of Volatile Organic Emissions from Existing Stationary Sources, Volume V: Surface Coating of Large Appliances (EPA450/2-77-034, December 1977)	§115.420 - §115.429
Surface Coating	Control of Volatile Organic Emissions from Existing Stationary Sources, Volume VI: Surface Coating of Miscellaneous Metal Parts and Products (EPA-450/2-78-015, June 1978)	§115.420 - §115.429
Surface Coating	Control of Volatile Organic Emissions from Existing Stationary Sources, Volume VII: Factory Surface Coating of Flat Wood Paneling (EPA-450/2-78-032, June 1978)	§115.420 - §115.429
Surface Coating	Control Technique Guidelines for Shipbuilding and Ship Repair Operations (Surface Coating) (61 FR 44050, August 27, 1996)	§115.420 - §115.429
Surface Coating	Guideline Series: Control of Volatile Organic Compound Emissions from Coating Operations at Aerospace Manufacturing and Rework Operations (EPA-453/R-97-004, December 1997) (see also 59 FR 29216, June 6, 1994)	§115.420 - §115.429

<sup>3</sup> Petroleum Dry Cleaning Systems (Control of Volatile Organic Compound Emissions from Large Petroleum Dry Cleaners (EPA-450/3-82-009, 1982)) is no longer included in the above list of CTG and ACT guidance documents. On May 16, 2006, the EPA removed this emission source category from the Federal Clean Air Act §183(e) list of products for regulation (71 FR 28320).

<b>Emission Source Category</b>	<b>CTG Reference Document</b>	<b>State Regulations Fulfilling RACT Requirements</b>
Surface Coating	Control Techniques Guidelines for Flat Wood Paneling Coatings (EPA-453/R-06-004, September 2006)	Negative declaration. No sources meeting CTG applicability identified in HGB area.
Surface Coating	Control Techniques Guidelines for Paper, Film, and Foil Coatings (EPA 453/R-07-003, September 2007)	§115.450 - §115.459
Surface Coating	Control Techniques Guidelines for Large Appliance Coatings (EPA 453/R-07-004, September 2007)	§115.450 - §115.459

Tank Trucks	Control of Hydrocarbons from Tank Truck Gasoline Loading Terminals (EPA-450/2-77-026, October 1977)	§115.211 - §115.219; §115.221 - §115.229
Tank Trucks	Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems (EPA-450/2-78-051, December 1978)	§115.211 - §115.219; §115.234 - §115.239
Vegetable Oil Manufacturing <sup>4</sup>	Control of Volatile Organic Emissions from Manufacture of Vegetable Oils (EPA-450/2-78-035, June 1978)	§115.120 - §115.129 See Section 3.3.3 <i>Vegetable Oil Manufacturing Operations</i>
Wood Furniture Manufacturing	Guidelines Series: Control of Volatile Organic Compound Emissions from Wood Furniture Manufacturing Operations (EPA453/R-96-007, April 1996) (see also 61 FR 25223, May 20, 1996 and 61 FR 50823, September 27, 1996)	§115.420 - §115.429

**Table D-2: State Rules Addressing VOC RACT Requirements in ACT Reference Documents**

Emission Source Category	ACT Reference Document	State Regulations Fulfilling RACT Requirements
Agricultural Pesticides	Control of Volatile Organic Compound Emissions from the Application of Agricultural Pesticides (EPA-453/R-92011, March 1993)	The TCEQ does not regulate the use of agricultural pesticides and this ACT document does not give presumptive controls; therefore, no RACT determination is required for this source category.

<sup>4</sup> The Vegetable Oil Manufacturing Operations CTG The CTG for the manufacturing of vegetable oils was published in June 1978 (see EPA-450/2-78- 035) but in a March 1980 guidance document, entitled “Guidance for the Control of Volatile Organic Compounds Emitted by Ten Selected Source Categories,” the EPA advised that the “states are not required, at this time, to develop regulations for the vegetable oil manufacturing industry.” The EPA guidance has not been revised since the March 1980 guidance. The EPA considers the vegetable oil CTG as only guidance for states when they need to develop attainment plans in nonattainment areas. Therefore, it is excluded in Table D-2.

<b>Emission Source Category</b>	<b>ACT Reference Document</b>	<b>State Regulations Fulfilling RACT Requirements</b>
Batch Processes	Alternative Control Techniques Document: Control of Volatile Organic Compound Emissions from Batch Processes (EPA-453/R-93-017 or EPA-453/R-93-020, February 1994)	§115.160 - §115.169
Cleaning Solvents	Alternative Control Techniques Document: Industrial Cleaning Solvents (EPA-453/R-94-015, February 1994)	§115.412 - §115.419; §115.420 - §115.429
Commercial Bakeries	Alternative Control Techniques Document: Bakery Ovens (EPA-453/R-92-017, December 1992)	§115.120 - §115.129
Ethylene Oxide Sterilization/Fumigation Operations	Alternative Control Techniques Document: Ethylene Oxide Sterilization/Fumigation Operations (EPA-450/3-89-007, March 1989)	Emissions from this source category are regulated by MACT per §113.200.
Graphic Arts	Alternative Control Techniques Document: Offset Lithographic Printing (EPA-453/R-94-054, June 1994) and Control of Volatile Organic Compound Emissions from Offset Lithographic Printing (EPA-453/D-95-001, September 1993)	§115.440 - §115.449
Industrial Wastewater	Industrial Wastewater Alternative Control Techniques (Draft CTG, EPA-453/D-93056, September 1992, was not finalized but issued as ACT in April 1994, and consists of cover memo with option tables and draft CTG)	§115.140 - §115.149
Leather Tanning and Finishing Operations	Alternative Control Technology Document: Leather Tanning and Finishing Operations (EPA-453/R-93-025)	No existing major sources in the HGB area (SIC 3111)
Batch Processes	Alternative Control Techniques Document: Control of Volatile Organic Compound Emissions from Batch Processes (EPA-453/R-93-017 or EPA-453/R-93-020, February 1994)	§115.160 - §115.169
Cleaning Solvents	Alternative Control Techniques Document: Industrial Cleaning Solvents (EPA-453/R-94-015, February 1994)	§115.412 - §115.419; §115.420 - §115.429
Commercial Bakeries	Alternative Control Techniques Document: Bakery Ovens (EPA-453/R-92-017, December 1992)	§115.120 - §115.129

<b>Emission Source Category</b>	<b>ACT Reference Document</b>	<b>State Regulations Fulfilling RACT Requirements</b>
Ethylene Oxide Sterilization/Fumigation Operations	Alternative Control Techniques Document: Ethylene Oxide Sterilization/Fumigation Operations (EPA-450/3-89-007, March 1989)	Emissions from this source category are regulated by MACT per §113.200.
Graphic Arts	Alternative Control Techniques Document: Offset Lithographic Printing (EPA-453/R-94-054, June 1994) and Control of Volatile Organic Compound Emissions from Offset Lithographic Printing (EPA-453/D-95-001, September 1993)	§115.440 - §115.449
Industrial Wastewater	Industrial Wastewater Alternative Control Techniques (Draft CTG, EPA-453/D-93056, September 1992, was not finalized but issued as ACT in April 1994, and consists of cover memo with option tables and draft CTG)	§115.140 - §115.149
Leather Tanning and Finishing Operations	Alternative Control Technology Document: Leather Tanning and Finishing Operations (EPA-453/R-93-025)	No existing major sources in the HGB area (SIC 3111)
Petroleum Liquid Storage	Alternative Control Techniques Document: Volatile Organic Liquid Storage in Floating and Fixed Roof Tanks (EPA-453/R-94-001, January 1994)	§115.110 - §115.119

**Table D-3: State Rules Addressing NO<sub>x</sub> RACT Requirements in ACT Reference Documents**

<b>Emission Source Category</b>	<b>ACT Reference Document</b>	<b>State Regulations Fulfilling RACT Requirements</b>
Cement Manufacturing	NO <sub>x</sub> Emissions from Cement Manufacturing (EPA-453/R-94-004, March 1994) and NO <sub>x</sub> Control Technologies for the Cement Industry: Final Report (EPA-457/R-00-002, September 2000)	No existing major sources in the HGB area (SIC 3241).
Glass Manufacturing	NO <sub>x</sub> Emissions from Glass Manufacturing (EPA-453/R-94-037, June 1994)	One major source glass manufacturing facility in the HGB area. See Section 3.2.2 of RACT discussion.
Industrial, Commercial, and Institutional Boilers	NO <sub>x</sub> Emissions from Industrial, Commercial and Institutional Boilers (EPA-453/R-94-022, March 1994)	§117.300 - §117.356 §101.350 - §101.363

<b>Emission Source Category</b>	<b>ACT Reference Document</b>	<b>State Regulations Fulfilling RACT Requirements</b>
Iron and Steel Mills	NO <sub>x</sub> Emissions from Iron and Steel Mills (EPA-453/R-94-065, September 1994)	§117.300 - §117.356 §101.350 - §101.363
Nitric and Adipic Acid Manufacturing	NO <sub>x</sub> Emissions from Nitric and Adipic Acid Manufacturing Plants (EPA-453/3-91-026, December 1991)	§117.4000 - 117.4056; §117.4100 - 117.4150
Process Heaters	NO <sub>x</sub> Emissions from Process Heaters (EPA453/R-93-034, September 1993)	§117.300 - §117.356 §101.350 - §101.363
Stationary Internal Combustion Engines	NO <sub>x</sub> Emissions from Stationary Internal Combustion Engines (EPA-453/R-93-032, July 1993, Updated September 2000)	§117.300 - §117.356 §101.350 - §101.363
Stationary Turbines	NO <sub>x</sub> Emissions from Stationary Combustion Turbines (EPA-453/R-93-007, January 1993)	§117.300 - §117.356 §101.350 - §101.363
Utility Boilers	NO <sub>x</sub> Emissions from Utility Boilers (EPA453/R-94-023, March 1994)	§117.1200 - 117.1256 §101.350 - §101.363
