Appendix 1 - Sheet 2

2023 RFP Demonstration Analysis with MOVES3

Bexar County Eight-Hour Ozone Nonattainment Area

One Nonattainment County: Bexar

2023 RFP Demonstration Analysis with MOVES3: To determine if the 2023 RFP requirements are met, the 2023 target level of emissions is compared to the 2023 controlled forecast inventory. The 2023 forecast inventory includes growth between the 2017 base year and the 2023 attainment year. The controlled forecast inventory has been reduced by subtracting the RFP control reductions from 2017 to 2023. If the 2023 controlled forecasted RFP EI is less than the 2023 RFP target level of emissions the 2023 RFP requirement is satisfied.

Line #	Description	NO _x (tpd)	VOC (tpd)
Line 1	Uncontrolled or existing controlled Bexar County 2023 emissions forecast with growth	423.28	362.06
Line 2	Creditable Bexar County RFP control reductions between 2017 and 2023	357.01	259.06
Line 3	Controlled Bexar County 2023, RFP emissions forecast (Line 1 minus Line 2)	66.27	103.00
Line 4	Amount of NO _x reduction substitution (see Sheet 3)	0.00	0.00
Line 5	Controlled Bexar County 2023, accounting for NO _x substitution (Line 3 plus Line 4)	66.27	103.00
Line 6	Bexar County 2023 RFP target level of emissions	75.36	103.00
Line 7	Excess (+) / Shortfall (-) (Line 6 minus Line 5)	9.09	0.00
Line 8	Is controlled RFP EI less than target level of emissions?	Yes	Yes

Notes:

1) To calculate the RFP controlled forecast for each milestone/attainment year, the total RFP creditable control strategy reductions to date (total RFP reductions from 2017 to the current RFP milestone year) are subtracted from the total uncontrolled RFP EI.

2) To calculate the final excess or shortfall for each milestone/attainment year, the controlled RFP emissions forecast is subtracted from the RFP target level of emissions. The RFP target level of emissions for all milestone years is calculated on the "Calc Targets" page.

3) Excess emissions reductions (Line 7) may be used to provide a transportation conformity safety margin. The safety margin must be less than or equal to the excess emissions reductions.

Appendix 1 - Sheet 3

2023 RFP NOx Substitution Analysis with MOVES3

Bexar County Eight-Hour Ozone Nonattainment Area

One Nonattainment County: Bexar

The NO_x substitution calculation includes six steps. First, calculate the percent target reduction for both VOC and NO_x by comparing the base year and target inventories. Second, calculate the percent actual reduction by comparing the base year and the actual inventory. Third, compare the percent required reduction to the percent actual reduction. If the percent actual reduction is greater than the percent required, then there are surplus reductions. If the percent actual reduction is less than the percent target, then there is a shortfall of reductions. The difference between the percent actual and the percent target reduction (when there are surplus reductions) is the amount that is available for substitution. For the fourth step, determine the percent NO_x needed for substitution. The minimum base year VOC percentage needed is equal to the percent base year shortfall in VOC plus the smallest increment possible, or 0.01. The respective NO_x percent is calculated using the NO_x base year inventory. The percent base year NO_x transfer should not exceed the percent base year NO_x surplus. The percent NO_x available to transfer is based upon the base year because the base year is the basis for the required reduction calculations. Fifth, convert the percent base year NO_x to a percent target NO_x using the percent base year NO_x from step 5 and the relative values of the base year and target NO_x inventory. The percent NO_x transfer is derived from milestone year target values because those are the values modified by NO_x transfer. The percent NO_x transfer is a percentage of the milestone year target NO_x value that is added back into the NO_x inventory and a percentage of the milestone year target VOC that is subtracted from the VOC inventory. For the sixth step, calculate the resulting tons per day (tpd) associated with the percent NO_x transfer. For NO_x, multiply the NO_x percent transfer and the NO_x milestone year target value. For VOC, multiply the percent NO_x transfer (which is the same as the percentage of the milestone year target VOC that is subtracted from the VOC inventory) and the VOC milestone year target value. The NO_x transfer amount (in tpd) is added to the NO_x actual (in tpd) inventory in the RFP demonstration calculation, and the VOC transfer amount (in tpd) is subtracted from the VOC actual (in tpd) inventory.

Line #	Description	NO _x	VOC
Line 1	2017 base year emissions (tpd)	82.27	110.28
Line 2	2023 controlled RFP EI (tpd)	66.27	103.00
Line 3	Total actual reductions for 2017 to 2023 (Line 1 minus Line 2) (tpd)	16.00	7.28
Line 4	Percent actual reductions for 2017 to 2023 (percent Line 3 is of Line 1) (%)	19.45	6.60
Line 5	2023 target RFP EI (tpd)	75.36	103.00
Line 6	2023 total target reductions for 2017 to 2023 (Line 1 minus Line 5) (tpd)	6.91	7.28
Line 7	Percent target reductions for 2017 to 2023 (percent Line 6 is of Line 1) (%)	8.40	6.60
Line 8	Percent surplus or shortfall (percent actual minus percent target, Line 4 minus Line 7) (%)	11.05	0.00
Line 9	Percent surplus to transfer (NO _x percentage should be less than Line 8) (%)	0.00	0.00
Line 10	Convert the percent surplus to transfer to tons per day (tpd)	0.00	Only NOx Value Needed
Line 11	Calculate what percentage Line 10 is of target (this is the percentage to transfer) (%)	0.00	0.00
Line 12	Tons equivalent to percent for transfer [Line 5 times (Line 10 divided by 100)] (tpd)	0.00	0.00
Line 13	NO _x substitution amount okay? (Check to assure NO _x substitution does not exceed maximum available: Sheet 02, Line 9 must be greater than zero)	Okay to Substitute	Okay to Substitute

Calculations: 2023 RFP MVEBs with MOVES3

Bexar County Nonattainment Area Eight-Hour Ozone Season VOC and NOX (tons per day)

One Nonattainment County: Bexar

Summary 2023 MVEB

Description	NO_x	VOC
2023 on-road emissions projection without post-1990 FCAA controls	356.10	225.67
2023 on-road mobile source RFP control reductions	335.47	213.29
2023 On-road mobile controlled inventory	20.63	12.38
Transportation conformity safety margin	0.00	0.00
Excess emissions reduction for 2023	9.09	0.00
Is excess emissions enough for safety margin?	yes	no
2023 MVEB with safety margin	20.63	12.38

Note: If safety margin is > than excess emission reductions modify percent safety margin input on the "Enter % for RFP Cont & Conf SM" page.

Notes:

1) If there are excess RFP control reductions, a transportation conformity safety margin is allowed. The transportation conformity safety margin for this SIP revision is calculated based upon a percentage of excess emissions. Control of the safety margin options and calculation of the NO_x and VOC values is done on the "Enter % RFP Cont & Conf SM" sheet of this spreadsheet. If changes are needed for the Safety Margin, go to the "Enter % RFP Cont & Conf SM" sheet.

Quantify the Reductions to Meet the Initial 15%, the 3% per Year and Contingency Requirements with MOVES3
Bexar County Eight-Hour Ozone Nonattainment Area

One Nonattainment County: Bexar

The Initial 15%, the 3% per Year and Contingency Requirements: The FCAA mandates that an initial 15%, plus a 3% per year starting in year seven, VOC reduction, net of growth, occur from the baseline year 2017 through the attainment year. The reductions must be demonstrated for the six-year period from baseline 2017 through 2023. NOX may be substituted for VOC for the County designated nonattainment under the one-hour, 1997 eight-hour standard, and 2008 eight-hour standards from the baseline 2017 through 2023. An additional 3% reduction must be demonstrated as a contingency measure for the one-year period following the attainment year, 2023. The division of the percent reductions between VOC and NOX are entered in the data entry sheet with tab name "Enter % for RFP Cont & Conf SM."

Calculation of Required 15% VOC Reductions and 3% per Year NO_x and VOC Reductions

RFP Analysis Year	Total Percent Reduction Requirement	Percent NO _x	Percent VOC	RFP BY EI NO _x (tpd)	RFP BY EI VOC (tpd)	Required Reductions NO _x (tpd)	Required Reductions VOC (tpd)
2017	N/A	N/A	N/A	82.27	110.28	N/A	N/A
2023	15.0	8.4	6.6	82.27	110.28	6.91	7.28
2024 Contingency	3.0	1.5	1.5	82.27	110.28	1.23	1.65

Appendix 1 - Sheet 09

Enter RFP NO_x and VOC Percentage Reductions, Contingency Percents and Safety Margin
 Bexar County Eight-Hour Ozone Nonattainment Area
 One Nonattainment County: Bexar

A 15% reduction is required for Bexar County for the period from the baseline 2017 through 2023. Input percentage of NO_x and VOC reductions to be used to demonstrate RFP for 2023. Only a NO_x value needs to input. The VOC percent will be calculated automatically based upon the total required and the percent NO_x to be used.

RFP NO _x and VOC Percent Reductions for Milestone and Attainment Years			
RFP Milestone Year	NO _x %	VOC %	Total Percent
2023	8.4	6.6	15

A 3% contingency is required for the RFP attainment contingency for 2023 to 2024. A 3% contingency is also required for the attainment demonstration for 2023 to 2024. The contingency reductions can be from NO_x or VOC. Input only the percent of the contingency reductions that will be from NO_x. The VOC value will be calculated automatically as 3 minus the NO_x percent.

RFP and Attainment Demonstration NO _x and VOC Percent Reductions for 2023 to 2024 Contingency			
Contingency Year	NO _x %	VOC %	Total Percent
RFP 2023 Milestone Contingency	1.5	1.5	3
AD 2023 to 2024	1.5	1.5	3

If there are excess RFP control reductions, a transportation conformity safety margin is allowed. The safety margin for this SIP revision is calculated based upon a percentage of excess emissions. If a safety margin will be used, enter the percentage of excess VOC and NO_x emissions to be used below. The safety margin amount must be less than or equal to the excess reductions after demonstrating RFP. The percentage entered must be between 0 and 100. An error message will appear if a value over 100 is entered. Adjusting the safety margin below will automatically update the MVEB calculation to include the percent of excess emissions entered. For reference, the corresponding percent of the MVEB and tons per day are provided.

RFP Milestone Year	Pollutant	Conformity Safety Margin % of Excess RFP Reductions	Percent of On-road EI (For Reference)	Tons Per Day Change to On-road EI (For Reference)
2023	NO _x	0	0.00	0.00
	VOC	0	0.00	0.00

Enter the percent of the NO_x milestone year target that will be transferred to VOC. Only the NO_x percent is entered. The VOC percent is automatically equal to the NO_x percent transfer. These values are used on Sheet 03 in the NO_x transfer calculations.

NO _x Substitution	Percent of NO _x Reductions to Transfer to Percent VOC Reductions	Percent of VOC Reductions Transferred from Percent NO _x Reductions
2023	0.00	0.00

'RFP Analysis Year	Uncontrolled NO _x (tpd)	Controlled NO _x (tpd)	Total Reduction NO _x (tpd)	Percent Reduction	Uncontrolled VOC (tpd)	Controlled VOC (tpd)	Total Reduction VOC (tpd)	Percent Reduction
2017	See Note 1	N/A	N/A	N/A	See Note 1	N/A	N/A	N/A

Notes:

1) Beginning with the Air Emissions Reporting Requirements (December 2008), the emissions required to be reported no longer include emissions from biogenic sources. Therefore, as of the 2017 reporting year, the comprehensive triennial emissions inventory no longer includes emissions from biogenic sources. The RFP demonstrations are based upon the emissions from anthropogenic sources. The guidance for RFP calculations shows the first step is to subtract the emissions from biogenic sources from the total base year emissions to obtain the total anthropogenic emission inventory. As of 2017, under the AERR, the base year emissions do not include biogenic sources and already represent the total anthropogenic emissions. In this case, step one of the RFP process is not needed, and the emissions from biogenic sources is unnecessary. This RFP SIP revision: uses a base year of 2017; does not require subtraction of the biogenic emissions in Step One of the RFP calculation process; and does not include quantification of emissions from biogenic sources.

Appendix 1 - Sheet 22

Calculations: 2017 to 2023 Control Measures Reductions
 Bexar County Nonattainment Area Eight-Hour Ozone Season VOC and NOX
One Nonattainment County: Bexar

Explanation: The control strategy name, control reduction amount, status of inclusion of the control in the RFP calculations, and whether or not the control is for on-road mobile sources were all input into the Enter Reductions 2023 sheet. The reduction is the reduction that is creditable from each control between 2017 and 2023. If the control has been turned off by inputting a "No" in the "Use this control for 2023 RFP demonstration?" column, the spreadsheet will put a zero in for the reduction for that control on this sheet, even if a positive value for the control was input into the Enter Reductions 2023 sheet. If it was intended to have a positive reduction for the control but there is a zero, go back to the Enter Reductions 2020 Sheet and change the No to a Yes indicating that the control will be used for RFP demonstration.

Appendix 1 - Sheet 23

Calculations: 2023-2024 Contingency Control Measures Reductions
 Bexar County Nonattainment Area Eight-Hour Ozone Season VOC and NOX
One Nonattainment County: Bexar

Explanation: The control strategy name, control reduction amount, status of inclusion of the control in the RFP calculations, and whether or not the control is for on-road mobile sources were all input into the Enter Cont Reductions 2024 sheet. The reduction is the reduction that is creditable from each control between 2023 and 2024. If the control has been turned off by inputting a "No" in the "Use this control for 2024 RFP contingency demonstration?" column, the spreadsheet will put a zero in for the reduction for that control on this sheet, even if a positive value for the control was input into the Enter Cont Reductions 2024 sheet. If it was intended to have a positive reduction for the control but there is a zero, go back to the Enter Cont Reductions 2024 Sheet and change the No to a Yes indicating that the control will be used for RFP contingency demonstration.

RFP Control Strategy Description	Source Category	Total 2023 to 2024 NO _x Emissions Reductions (tpd)	Total 2023 to 2024 VOC Emissions Reductions (tpd)	Use this control for 2021 RFP contingency demonstration? (Yes or No)
