

Plug your well.

Protect Texas.

The Texas Voluntary Marginal Conventional Well Plugging Program (TxMCW) is a grant program offering financial incentives for the voluntary plugging of low-producing conventional oil and gas wells across Texas.

TxMCW may fund up to 100% of eligible project costs, including well plugging, well abandonment, and methane measurement activities.

Visit www.txmcw.org for more information, including:

- current program status
- well prioritization criteria
- published methane measurement data

Is your well eligible?

Eligible marginal conventional wells (MCWs) must be onshore and, over a calendar year, produce less than or equal to one of the following:

- 15 barrels of oil equivalent per day (BOED).
- 90 thousand cubic feet (Mcf) of gas per day.

Note: 1 BOE = 6 Mcf.

Stay up to date with TxMCW!

- Learn more about program requirements and the application process.
- Sign up for notifications about upcoming key dates, webinars, and program news.
- Review the Methane Measurement Plan and Well Prioritization Plan.
- Monitor emissions reductions.
- Track the program's progress.

With \$134.1 million in funding from the Inflation Reduction Act's Methane Emissions Reduction Program (MERP), TxMCW's goal is to reduce harmful air emissions and pollutants by permanently plugging and abandoning MCWs. TxMCW is a program of the Texas Commission on Environmental Quality (TCEQ).
