Re: Release of water from Mexico Reservoir

Dear Senator Cornyn,

I want to thank you for recognizing our need for assistance in the current drought situation. As you well know Mexico is currently behind in its obligation to deliver water to the United States under the 1944 Treaty. The amount that Mexico is currently behind would alleviate the immediate situation we are in. Delta Lake Irrigation District could possibly be out of agriculture water within a couple of months. This will put an extreme burden on the Municipalities we deliver water to. They will have to purchase additional water (push water) to help with their deliveries.

The recent news of the release of water from Mexico was very pleasing at first, until further researching the reservoir that Mexico was releasing the water from. The La Fragua reservoir current capacity is 22,000 ac/ft. If Mexico drained the reservoir, which is highly unlikely the US would only receive 7,300 ac/ft at best. This news has only complicated the issue worse than before; it has given the Municipalities and Farmer false hope that the water crises would be alleviated. I can only hope Mexico is going to continue releasing water from other reservoirs until they become current with their obligation under the 1944 treaty.

I hope more pressure will be put on our State Department to step in and help us win getting Mexico to comply with the 1944 Treaty. The current drought has only worsened the economy in the Lower Rio Grande Valley, hurting Municipalities, Residents, Farmers, Ranchers, Supplier and Businesses. We need Mexico to release additional water before this becomes a crisis that could take years to recover from. Again, I thank you for all you done are doing to help with this situation.

Respectfully,

The Honorable John Cornyn
