

Lead Education and Sampling Notification

[PWS name] provides water service to [name of facility]. Community water systems are required to provide public education and lead sampling to all schools and child care facilities they serve that were constructed prior to January 1, 2014 in accordance with National Primary Drinking Water Regulations - Title 40 of the Code of Federal Registrations (CFR) §141.92.

We are providing you with this educational brochure which contains information about lead, the sources and health risks of lead, how your facility can reduce lead exposure, how to prepare for a sampling event, and some options for remediation (if needed).

We would like to coordinate with your school or child care facility personnel to plan the sample collection event and decide who will conduct sampling, at least **thirty (30) days** prior to the sampling event. The sample collector may be from the water system, school, child care facility, or another appropriately trained individual.

Below is a proposed sampling schedule for your elementary school (grades kindergarten through 8th grade) or child care facility.

Proposed sampling schedule/date(s):	
--	--

If you are a Secondary school (9th through 12th grade) and would like to participate in lead sampling, please contact us to request a sampling schedule.
