

## 40 CFR Part 60, Subpart XXX - Requirements Reference Tables

### Subpart XXX Standards

- [§60.762\(a\)](#) Exemption for MSW landfill with design capacity less than 2.5 million megagrams by mass or 2.5 million cubic meters by volume.
- [§60.762\(b\)\(1\)](#) Standard for MSW landfill with design capacity equal to or greater than 2.5 million megagrams by mass or 2.5 million cubic meters by volume with a calculated NMOC emission rate that is less than 34 megagrams per year.
- [§60.762\(b\)\(2\)\(i\)](#) Standard for MSW landfill with design capacity equal to or greater than 2.5 million megagrams by mass or 2.5 million cubic meters by volume with a calculated NMOC emission rate that is greater than 34 megagrams per year but less than 50 megagrams per year.
- [§60.762\(b\)\(2\)\(iii\)\(A\)](#) Standard for MSW landfill with design capacity equal to or greater than 2.5 million megagrams by mass or 2.5 million cubic meters by volume with a calculated NMOC emission rate that is greater than 50 megagrams per year that is routing the collected gas to a non-enclosed flare.
- [§60.762\(b\)\(2\)\(iii\)\(B\)1](#) Standard for MSW landfill with design capacity equal to or greater than 2.5 million megagrams by mass or 2.5 million cubic meters by volume with a calculated NMOC emission rate that is greater than 50 megagrams per year that is routing the collected gas to a control system designed and operated to reduce NMOC by 98 weight-percent.
- [§60.762\(b\)\(2\)\(iii\)\(B\)2](#) Standard for MSW landfill with design capacity equal to or greater than 2.5 million megagrams by mass or 2.5 million cubic meters by volume with a calculated NMOC emission rate that is greater than 50 megagrams per year that is routing the collected gas to an enclosed combustion device designed and operated to reduce the outlet NMOC concentration to less than 20 parts per million by volume.
- [§60.762\(b\)\(2\)\(iii\)\(C\)](#) Standard for MSW landfill with design capacity equal to or greater than 2.5 million megagrams by mass or 2.5 million cubic meters by volume with a calculated NMOC emission rate that is greater than 50 megagrams per year that is routing the collected gas to a treatment system.
