

Plain Language Summary for Concrete Batch Plant Standard Permit
Application for Concrete Batch Plant Standard Permit Registration Number 167889

The following summary is provided for this pending air permit application being reviewed by the Texas Commission on Environmental Quality as required by 30 Texas Administrative Code Chapter 39. The information provided in this summary may change during the technical review of the application and are not federal enforceable representations of the permit application.

Titan Ready Mix, LP (CN605723097) has submitted an application to amend Air Quality Standard Permit Registration Number 167889, which currently authorizes a concrete batch plant facility (RN111424693) located at 3060 W Hwy.199 near Springtown, Parker County, Texas 76082.

This amendment will authorize additional equipment consisting of two storage silos, two hoppers, and two conveyors, the replacement of existing equipment with like-for-like equipment, the removal of the central mixer to make the batch plant a truck mix style plant, and reduction of the facility's existing short-term and long-term production rate limit, with the facility having a maximum site-wide production rate of 200 cubic yards per hour and 650,000 cubic yards a year of concrete and an operational schedule of up to 8,760 hours per year. Particulate matter will be emitted from the handling of aggregate, cement, and flyash. Roads and traffic areas will be controlled by watering them and paving them to control dust. Dust from stockpiles will be minimized by watering them. Enclosures and baghouses, including a central baghouse, will be used to control cement and fly ash dust at the facility.
