TCEQ Mechanical Sources Historical Best Available Control Technology (BACT) Requirements Concrete Batch Plants

Year	Source Type	Pollutant	Minimum Acceptable Control	Control Efficiency or Details
2008	Concrete Batch Plant		85% reduction	Truck drop point - typically water fog ring
			95% reduction or 0.01 gr/dscf; suction shroud and minimum 4000 acfm;	Truck drop point or central mix -typically a fabric filter. 5% opacity on fabric filters.
			70% reduction; prewashed aggregate	Material handling processes and stockpiles (typically water sprays on stockpiles).
