

Guidance for Using Site Plans of Chemical Locations at Facility

Site plans can be useful for describing the locations of chemicals for Tier II Reporting. You may use a simple site map to show the precise location of the chemicals at your facility. A site plan may be be hand drawn or a digital image. If the site plan refers to a legend, please be sure it is included. Site plans/maps are added under the "Chemicals" tab.

Example of a hand-drawn site plan showing locations of chemicals at the facility:
