

ENGLISH LANGUAGE TEMPLATE FOR CAFO PERMIT APPLICATIONS

The following summary is provided for this pending water quality permit application being reviewed by the Texas Commission on Environmental Quality as required by the TCEQ Public Participation Plan and Language Access Plan. The information provided in this summary may change during the technical review of the application and is not a federal enforceable representation of the permit application.

- 1) Applicant's Name: Dennis & Linda Schouten
- 2) Enter Customer Number: CN601116429, CN604667386
- 3) Name of facility: D&L Dairy
- 4) Enter Regulated Entity Number: RN102844768
- 5) Provide your permit Number: WQ0004133000
- 6) Facility Business: This facility currently contains 999 Total Dairy Cattle in which 999 Milking cattle in confinement. The facility has 4 Land Management Units (LMUs); LMU #1 - 22 acres, LMU #2 - 36 acres, LMU #3 - 23 acres, LMU #4 - 80 acres. There is one Settling Basin, one Slurry Pit and three Retention Control Structures (RCSs) on site; RCS #1 is 7.53 ac-ft, RCS #2 is 4.84 ac-ft and RCS #3 is 10.10 ac-ft. There are five water wells and one plugged water well located on the facility. The facility is located in the drainage area of Upper North Bosque River in Segment No. 1255.
- 7) Facility Location: 17743 N SH 108, Stephenville, Texas 76401
- 8) Application Type: Renewal / Major Amendment Application, TCEQ 00728, 00760
- 9) Description of your request: Removal/Plugging of Well #2 and addition of Well #2a.
- 10) Potential pollutant sources at the facility include (list the pollutant sources):
Manure, Wastewater, Dust, lubricants, Feed, Fuel Storage, Medicines, Cleaning Chemicals
- 11) The following best management practices will be implemented at the site to manage pollutants from the listed pollutant sources (describe the best management practices that are used): Manure will be stored within the drainage area of RCS #1, RCS #2 and RCS #3. Wastewater will be stored in RCS #1 RCS #2, and RCS #3 until properly irrigated through a center pivot and Big Gun Irrigation systems. Manure will be hauled to the appropriate LMUs, offsite, outside the Bosque River Watershed or to 3rd party for land application for beneficial use in accordance with the Nutrient Management Plan. RCS #1, RCS #2, and RCS #3 will be designed to store and maintain the sludge and 25yr-24hr rainfall. All other cleaners, lubricants, fuels and medicines will be maintained and all manufacturers' directions followed. Dead cows will be composted within the drainage area of the RCS or Removed within 72 hours.

Unless otherwise limited, manure, sludge, or wastewater will not be discharged from a land management unit (LMU) or a retention control structure (RCS) into or adjacent to water in the state from a CAFO except resulting from any of the following conditions:

- 1) a discharge of manure, sludge, or wastewater that the permittee cannot reasonably prevent or control resulting from a catastrophic condition other than a rainfall event;

2) overflow of manure, sludge, or wastewater from a RCS resulting from a chronic/catastrophic rainfall event; or

3) a chronic/catastrophic rainfall discharge from a LMU that occurs because the permittee takes measures to de-water the RCS if the RCS is in danger of imminent overflow.
