2. Primer aviso (NORI, por sus siglas en inglés)
   - Inglés
   - Idioma alternativo (español)
3. Solicitud original

PLAIN LANGUAGE SUMMARY

Ellis AD 1, LLC plans to develop Ellis AD 1. Ellis AD 1 is a proposed anaerobic digestion facility located on the north side of Austonia Road, 1200 feet west of the intersection of Austonia Road and Armstrong Road, in Ellis County, Texas 75119. Ellis AD 1, LLC will be developing, constructing, owning and operating Ellis AD 1. The proposed facility will produce renewable natural gas and agricultural beneficial by-products.

This permit will not authorize a discharge of pollutants into waters of the state.

Anaerobic digestion is a process by which organic material, such as animal manure and food waste, is broken down by microbes in an enclosed environment to produce biogas. By combining food waste and manure, a smaller volume of manure can create enough biogas to make the system viable. Each digester tank will receive material from the hydrolysis tanks on a regular schedule. Materials transferred from the hydrolysis tanks to the digester tanks will include the food waste slurry. Manure will be transferred into the AD tank by tanker trucks as needed to maintain gas production. Once material is transferred into the digestion tank, it will be homogenized using mixers. In the digester the homogenous mix of manure and food waste is heated and resides in the tank for several days. While in the tanks, microbes break down the mixture in an anaerobic environment, resulting in the production of biogas, which is a combination of methane, carbon dioxide, hydrogen gas, and water vapor. The biogas that is collected in the headspace of the digesters will be routed through a gas conditioning, and upgrading system to remove impurities. This will result in pipeline quality natural gas. Digestate is the effluent discharged from the digesters. The digester tanks have a finite capacity, and as more organic waste, manure, or food waste is added, the processed material within the tanks needs to be removed. The removal of digestate from the digesters will occur throughout the day as needed to reduce the volume of material within the digester tanks. This material will be a nutrient-rich liquid digestate. The liquid digestate is stored in the onsite lagoon. The liquid will be applied to agricultural fields for crop fertilization.

Ellis AD 1, LLC planea desarrollar Ellis AD 1. Ellis AD 1 es una instalación de digestión anaeróbica propuesta ubicada en el lado norte de Austonia Road, 1200 pies al oeste de la intersección de Austonia Road y Armstrong Road, en el condado de Ellis, Texas 75119. Ellis AD 1, LLC desarrollará, construirá, poseerá y operará Ellis AD 1. La instalación propuesta producirá gas natural renovable y subproductos agrícolas beneficiosos.

Este permiso no autorizará la descarga de contaminantes en las aguas del estado.

La digestión anaeróbica es un proceso mediante el cual los microbios descomponen el material orgánico, como el estiércol animal y los desechos de alimentos, en un entorno cerrado para producir biogás. Al combinar los desechos de alimentos y el estiércol, un volumen menor de estiércol puede crear suficiente biogás para que el sistema sea viable. Cada tanque de digestión recibirá material de los tanques de hidrólisis en un cronograma regular. Los materiales transferidos desde los tanques de hidrólisis a los tanques digestores incluirán el purín de desechos de alimentos. El estiércol se transferirá al tanque de AD mediante camiones cisterna según sea necesario para mantener la producción de gas. Una vez que el material se transfiere al tanque de digestión, se homogeneizará utilizando mezcladores. En el digestor, la mezcla homogénea de estiércol y desechos de alimentos se calienta y permanece en el tanque durante varios días. Mientras está en los tanques, los microbios descomponen la mezcla en un entorno anaeróbico, lo que da como resultado la producción de biogás, que es una combinación de metano, dióxido de carbono, gas hidrógeno y vapor de agua. El biogás que se recolecta en el espacio superior de los digestores se enrutará a través de un sistema de acondicionamiento y mejora de gas para eliminar las impurezas. Esto dará como resultado gas natural de calidad de tubería. El digestato es el efluente descargado de los digestores. Los tanques digestores tienen una capacidad finita y, a medida que se agregan más desechos orgánicos, estiércol o desechos de alimentos, es necesario eliminar el material procesado dentro de los tanques. La eliminación del digestato de los digestores se realizará a lo largo del día según sea necesario para reducir el volumen de material dentro de los tanques de digestión. Este material será un digestato líquido rico en nutrientes. El digestato líquido se almacena en la laguna del lugar. El líquido se aplicará a los campos agrícolas para fertilizar los cultivos.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

NOTICE OF RECEIPT OF APPLICATION AND INTENT TO OBTAIN WATER QUALITY PERMIT

PROPOSED PERMIT NO. WQ0005485000

APPLICATION. Ellis AD 1, LLC; Creek Land and Cattle LLC; and Alliance Land & Cattle, LLC; 133 Boston Post Road, Weston, Massachusetts 02493, which will operate an anaerobic digestion facility, have applied to the Texas Commission on Environmental Quality (TCEQ) for proposed Texas Land Application Permit (TLAP) No. WQ0005485000 to authorize the disposal of treated wastewater at a volume not to exceed a daily average flow of 56,224 gallons per day via irrigation of approximately 4,553 acres. The facility will be located approximately 1,200 feet west of the intersection of Armstrong Road and Austonia Road, in Ellis County, Texas 75119 and the disposal areas will be located across multiple tracts within an 11-mile distance from the treatment facility in a northwest, west, and southwest direction, in Ellis and Navarro Counties, Texas 75119. TCEQ received this application on February 10, 2025. The permit application will be available for viewing and copying at Nicholas P. Sims Library, 515 West Main Street, Waxahachie, in Ellis County, Texas and at Corsicana Public Library, 100 North 12th Street, Corsicana, in Navarro County, Texas prior to the date this notice is published in the newspaper. The application, including any updates, and associated notices are available electronically at the following webpage: https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For the exact location, refer to the application. https://gisweb.tceq.texas.gov/LocationMapper/?marker=-96.72447,32.199236&level=18

ALTERNATIVE LANGUAGE NOTICE. Alternative language notice in Spanish is available at: https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications. El aviso de idioma alternativo en español está disponible en https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications.

ADDITIONAL NOTICE. TCEQ's Executive Director has determined the application is administratively complete and will conduct a technical review of the application. After technical review of the application is complete, the Executive Director may prepare a draft permit and will issue a preliminary decision on the application. **Notice of the Application and Preliminary Decision will be published and mailed to those who are on the county-wide mailing list and to those who are on the mailing list for this application. That notice will contain the deadline for submitting public comments.**

PUBLIC COMMENT / PUBLIC MEETING. You may submit public comments or request a public meeting on this application. The purpose of a public meeting is to provide the

opportunity to submit comments or to ask questions about the application. TCEQ will hold a public meeting if the Executive Director determines that there is a significant degree of public interest in the application or if requested by a local legislator. A public meeting is not a contested case hearing.

OPPORTUNITY FOR A CONTESTED CASE HEARING. After the deadline for submitting public comments, the Executive Director will consider all timely comments and prepare a response to all relevant and material, or significant public comments. **Unless the application is directly referred for a contested case hearing, the response to comments, and the Executive Director's decision on the application, will be mailed to everyone who submitted public comments and to those persons who are on the mailing list for this application. If comments are received, the mailing will also provide instructions for requesting reconsideration of the Executive Director's decision and for requesting a contested case hearing.** A contested case hearing is a legal proceeding similar to a civil trial in state district court.

TO REQUEST A CONTESTED CASE HEARING, YOU MUST INCLUDE THE FOLLOWING ITEMS IN YOUR REQUEST: your name, address, phone number; applicant's name and proposed permit number; the location and distance of your property/activities relative to the proposed facility; a specific description of how you would be adversely affected by the facility in a way not common to the general public; a list of all disputed issues of fact that you submit during the comment period and, the statement "[I/we] request a contested case hearing." If the request for contested case hearing is filed on behalf of a group or association, the request must designate the group's representative for receiving future correspondence; identify by name and physical address an individual member of the group who would be adversely affected by the proposed facility or activity; provide the information discussed above regarding the affected member's location and distance from the facility or activity; explain how and why the member would be affected; and explain how the interests the group seeks to protect are relevant to the group's purpose.

Following the close of all applicable comment and request periods, the Executive Director will forward the application and any requests for reconsideration or for a contested case hearing to the TCEQ Commissioners for their consideration at a scheduled Commission meeting.

The Commission may only grant a request for a contested case hearing on issues the requestor submitted in their timely comments that were not subsequently withdrawn. **If a hearing is granted, the subject of a hearing will be limited to disputed issues of fact or mixed questions of fact and law relating to relevant and material water quality concerns submitted during the comment period.**

MAILING LIST. If you submit public comments, a request for a contested case hearing or a reconsideration of the Executive Director's decision, you will be added to the mailing list for this specific application to receive future public notices mailed by the Office of the Chief Clerk. In addition, you may request to be placed on: (1) the permanent mailing list for a specific applicant name and permit number; and/or (2) the mailing list for a specific county. If you wish to be placed on the permanent and/or the county mailing list, clearly specify which list(s) and send your request to TCEQ Office of the Chief Clerk at the address below.

INFORMATION AVAILABLE ONLINE. For details about the status of the application, visit the Commissioners' Integrated Database at www.tceq.texas.gov/goto/cid. Search the database using the permit number for this application, which is provided at the top of this notice.

AGENCY CONTACTS AND INFORMATION. All public comments and requests must be submitted either electronically at **https://www14.tceq.texas.gov/epic/eComment/**, or in writing to the Texas Commission on Environmental Quality, Office of the Chief Clerk, MC-105, P.O. Box 13087, Austin, Texas 78711-3087. Please be aware that any contact information you provide, including your name, phone number, email address and physical address will become part of the agency's public record. For more information about this permit application or the permitting process, please call the TCEQ Public Education Program, Toll Free, at 1-800-687-4040 or visit their website at www.tceq.texas.gov/goto/pep. Si desea información en Español, puede llamar al 1-800-687-4040.

Further information may also be obtained from Ellis AD 1, LLC, Creek Land and Cattle LLC, and Alliance Land & Cattle, LLC at the address stated above or by calling Mr. William Coffrin, Development Manager, Ellis AD 1, LLC, at 781-232-7597, Extension 4.

Issuance Date: March 11, 2025

COMISIÓN DE CALIDAD AMBIENTAL DE TEXAS

AVISO DE RECEPCIÓN DE LA SOLICITUD Y LA INTENCIÓN DE OBTENER UN PERMISO DE CALIDAD DEL AGUA

PERMISO PROPUESTO NÚM. WQ0005485000

SOLICITUD. Ellis AD 1, LLC, Creek Land and Cattle LLC, y Alliance Land & Cattle, LLC, 133 Boston Post Road, Weston, Massachusetts 02493, que operarán una planta de digestión anaeróbica, han solicitado a la Comisión de Calidad Ambiental de Texas (TCEQ) un propuesto Permiso de Aplicación en Terrenos de Texas (TLAP) N.º WQ0005485000 para autorizar la eliminación de aguas residuales tratadas en un volumen que no sobrepase un flujo promedio diario de 56,224 galones por día mediante riego de aproximadamente 4,553 acres. La instalación estará ubicada aproximadamente a 1,200 pies al oeste de la intersección de Armstrong Road y Austonia Road, en el condado de Ellis, Texas 75119, y las áreas de eliminación estarán ubicadas en múltiples tramos dentro de una distancia de 11 millas de la instalación de tratamiento en dirección noroeste, oeste y suroeste, en los condados de Ellis y Navarro, Texas 75119. La TCEQ recibió esta solicitud el día 10 de febrero de 2025. La solicitud de permiso estará disponible para leerla y copiarla en la Biblioteca Nicholas P. Sims, 515 West Main Street, Waxahachie, en el condado de Ellis, Texas, y en la Biblioteca Pública de Corsicana, 100 North 12th Street, Corsicana, en el condado de Navarro, Texas antes de la fecha de publicación de este aviso en el periódico. La solicitud, incluidas las actualizaciones y los avisos asociados, están disponibles electrónicamente en la siguiente página web: https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications. Este enlace a un mapa electrónico de la ubicación general del sitio o de la instalación es proporcionado como una cortesía y no es parte de la solicitud o del aviso. Para la ubicación exacta, consulte la solicitud. https://gisweb.tceq.texas.gov/LocationMapper/?marker=-96.72447,32.199236&level=18

AVISO DE IDIOMA ALTERNATIVO. El aviso de idioma alternativo en español está disponible en https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications.

AVISO ADICIONAL. El Director Ejecutivo de la TCEQ ha determinado que la solicitud es administrativamente completa y realizará una revisión técnica de la solicitud. Después de completar la revisión técnica de la solicitud, el Director Ejecutivo puede preparar un borrador del permiso y emitirá una decisión preliminar sobre la solicitud. **El aviso de la Solicitud y Decisión Preliminar será publicado y enviado por correo a las personas que figuran en la lista de difusión en todo el condado y a las personas que figuran en la lista de correo para esta solicitud. Ese aviso contendrá la fecha límite para presentar comentarios públicos.**

COMENTARIO PÚBLICO / REUNIÓN PÚBLICA. Usted puede presentar comentarios públicos o pedir una reunión pública sobre esta solicitud. El propósito de una reunión pública es dar la oportunidad de presentar comentarios o hacer preguntas acerca de la solicitud. La TCEQ

realizará una reunión pública si el Director Ejecutivo determina que hay un grado de interés público suficiente en la solicitud o si un legislador local lo pide. Una reunión pública no es una audiencia administrativa de lo contencioso.

OPORTUNIDAD DE UNA AUDIENCIA ADMINISTRATIVA DE LO CONTENCIOSO. Después del plazo para presentar comentarios públicos, el Director Ejecutivo considerará todos los comentarios apropiados y preparará una respuesta a todos los comentarios públicos esenciales, pertinentes, o significativos. **A menos que la solicitud haya sido referida directamente a una audiencia administrativa de lo contencioso, la respuesta a los comentarios y la decisión del Director Ejecutivo sobre la solicitud serán enviados por correo a todos los que presentaron un comentario público y a las personas que están en la lista de difusión para esta solicitud. Si se reciben comentarios, el aviso enviado por correo también proveerá instrucciones para solicitar una reconsideración de la decisión del Director Ejecutivo y pedir una audiencia administrativa de lo contencioso.** Una audiencia administrativa de lo contencioso es un procedimiento legal similar a un procedimiento legal civil en un tribunal de distrito del estado.

PARA PEDIR UNA AUDIENCIA ADMINISTRATIVA DE LO CONTENCIOSO, USTED DEBE INCLUIR EN SU PEDIDO LOS SIGUIENTES DATOS: su nombre; dirección; teléfono; nombre del solicitante y número del permiso propuesto; la ubicación y la distancia de su propiedad/actividad con respecto a la instalación propuesta; una descripción específica de la forma en que usted sería afectado adversamente por la instalación de una manera no común al público en general; una lista de todas las cuestiones de hecho en disputa que usted presente durante el período de comentarios y la declaración "[Yo/nosotros] solicito/solicitamos una audiencia administrativa de lo contencioso". Si la solicitud de audiencia administrativa de lo contencioso se presenta por parte de un grupo o una asociación, la solicitud debe identificar el representante del grupo para recibir correspondencia en el futuro; debe identificar un miembro individual del grupo que sería afectado adversamente por la instalación o actividad propuesta; debe proveer la información ya indicada anteriormente con respecto a la ubicación del miembro afectado y la distancia de la instalación o actividad; debe explicar cómo y por qué el miembro sería afectado; y debe explicar la forma en que los intereses que el grupo desea proteger son pertinentes al propósito del grupo.

Después del cierre de todos los períodos para los pedidos y comentarios pertinentes, el Director Ejecutivo enviará la solicitud y los pedidos para reconsideración o por una audiencia administrativa de lo contencioso a los Comisionados de la TCEQ para su consideración en una reunión programada de la Comisión.

La Comisión sólo podrá conceder una solicitud de audiencia administrativa de lo contencioso sobre cuestiones que el solicitante presentó en sus comentarios oportunos y que no fueron retiradas posteriormente. **Si se concede una audiencia, el tema de la audiencia se limitará a cuestiones de hecho en disputa o cuestiones mixtas de hecho y de derecho relacionadas con inquietudes relevantes y materiales sobre la calidad del agua presentadas durante el período de comentarios.**

LISTA DE CORREO. Si usted somete comentarios públicos, un pedido para una audiencia administrativa de lo contencioso o una reconsideración de la decisión del Director Ejecutivo, será añadido a la lista de difusión para esta solicitud específica para recibir avisos públicos futuros enviados por la Oficina del Secretario Principal. Además, puede pedir que lo incluyan

en: (1) la lista de correo permanente para el nombre de solicitante y número de permiso específicos; y/o (2) la lista de correo para un condado especifico. Si desea ser añadido a la lista de correo permanente y/o del condado, identifique claramente la(s) lista(s) y envíe su solicitud por correo a la Oficina del Secretario Principal de la TCEQ, a la dirección proporcionada más abajo.

INFORMACIÓN DISPONIBLE EN LÍNEA. Para obtener detalles sobre el estado de la solicitud, visite la Base de Datos Integrada de los Comisionados en www.tceq.texas.gov/goto/cid. Busque en la base de datos utilizando el número de permiso para esta solicitud, que se encuentra en la parte superior de este aviso.

CONTACTOS E INFORMACIÓN DE LA AGENCIA. Todos los comentarios y solicitudes públicas deben enviarse electrónicamente a **https://www14.tceq.texas.gov/epic/eComment/**, o por escrito a la Comisión de Calidad Ambiental de Texas, Oficina del Secretario Principal, MC-105, P.O. Box 13087, Austin, Texas 78711-3087. Tenga en cuenta que cualquier información de contacto que proporcione, incluido su nombre, número de teléfono, dirección de correo electrónico y dirección física, pasará a formar parte del registro público de la agencia. Si necesita más información sobre esta solicitud de permiso o el proceso de emisión del permiso, por favor llame al Programa de Educación Pública de la TCEQ, sin cobro, al 1-800-687-4040 o visite su sitio web en www.tceq.texas.gov/goto/pep. Si desea información en Español, puede llamar al 1-800-687-4040.

También se puede obtener información adicional de Ellis AD 1, LLC, Creek Land and Cattle LLC, y Alliance Land & Cattle, LLC en la dirección indicada más arriba o llamando al Sr. William Coffrin, Gerente de Desarrollo, Ellis AD 1, LLC, at 781-232-7597, Extensión 4.

RE: Ellis AD 1, LLC Wastewater Treatment Facility
TLAP Permit Application

Dear Sirs:

A permit renewal application for Ellis AD 1, LLC Wastewater Treatment Facility located in Ellis and Navarro County, Texas is attached. One original and two copies of the complete application package are included and are being delivered via FedEx to the agency. The application fee has been mailed to the Revenues Section, and a photocopy of the check is included in the application.

Please do not hesitate to contact us if you have any questions or need additional information. You may contact me at (512) 327-2708 or via email at jm@jmaenv.com. You may also contact William Coffrin at wcoffrin@vanguardrenewables.com or (518) 524-4338.

Yours truly,

JAMES MIERTSCHIN & ASSOCIATES, INC.

INDUSTRIAL WASTEWATER PERMIT APPLICATION ADMINISTRATIVE REPORT 1.0

This report is required for all applications for TPDES permits and TLAPs, except applications for oil and gas extraction operations subject to 40 CFR Part 435. Contact the Applications Review and Processing Team at 512-239-4671 with any questions about completing this report.

Applications for oil and gas extraction operations subject to 40 CFR Part 435 must use the Oil and Gas Exploration and Production Administrative Report (TCEQ Form-20893 and 20893-inst[1]).

Item 1. Application Information and Fees (Instructions, Page 26)

a. Complete each field with the requested information, if applicable.

Applicant Name: Ellis AD 1, LLC

Permit No.: WQ000Click to enter text.

EPA ID No.: TX0Click to enter text.

Expiration Date: Click to enter text.

b. Check the box next to the appropriate authorization type.

Item 2. Applicant Information (Instructions, Pages 26)

a. Customer Number, if applicant is an existing customer: CNClick to enter text.

Note: Locate the customer number using the TCEQ's Central Registry Customer Search[3].

b. Legal name of the entity (applicant) applying for this permit: Ellis AD 1, LLC

Note: The owner of the facility must apply for the permit. The legal name must be spelled exactly as filed with the TX SOS, Texas Comptroller of Public Accounts, County, or in the legal documents forming the entity.

c. Name and title of the person signing the application. (**Note:** The person must be an executive official that meets signatory requirements in 30 TAC § 305.44.)

Prefix: Mrs. Full Name (Last/First Name): Martin/Kim

Title: VP of Development Credential: Click to enter text.

d. Will the applicant have overall financial responsibility for the facility?

☒ Yes ☐ No

[2] All facilities are designated as minors until formally classified as a major by EPA.

[3] https://www15.tceq.texas.gov/crpub/index.cfm?fuseaction=cust.CustSearch

Note: The entity with overall financial responsibility for the facility must apply as a co-applicant, if not the facility owner.

Item 3. Co-applicant Information (Instructions, Page 27)

☐ Check this box if there is no co-applicant.; otherwise, complete the below questions.

a. Legal name of the entity (co-applicant) applying for this permit: CREEK LAND AND CATTLE LLC / ALLIANCE LAND & CATTLE, LLC

Note: The legal name must be spelled exactly as filed with the TX SOS, Texas Comptroller of Public Accounts, County, or in the legal documents forming the entity.

b. Customer Number (if applicant is an existing customer): CNClick to enter text.

Note: Locate the customer number using the TCEQ's Central Registry Customer Search.

c. Name and title of the person signing the application. (**Note:** The person must be an executive official that meets signatory requirements in 30 TAC § 305.44.)

Prefix: Mr. Full Name (Last/First Name): Dance/Blair

Title: Co-Applicants Credential: Click to enter text.

d. Will the co-applicant have overall financial responsibility for the facility?

☐ Yes ☒ No

Note: The entity with overall financial responsibility for the facility must apply as a co-applicant, if not the facility owner.

Item 4. Core Data Form (Instructions, Pages 27)

a. Complete one Core Data Form (TCEQ Form 10400) for each customer (applicant and co-applicant(s)) and include as an attachment. If the customer type selected on the Core Data Form is Individual, complete Attachment 1 of the Administrative Report. Attachment: B

Item 5. Application Contact Information (Instructions, Page 27)

Provide names of two individuals who can be contact for additional information about this application. Indicate if the individual can be contact about administrative or technical information, or both.

a. ☒ Administrative Contact . ☒ Technical Contact

Prefix: Mr. Full Name (Last/First Name): Coffrin/William

Title: Development Mgr Credential: Click to enter text.

Organization Name: Ellis AD 1, LLC

Mailing Address: 133 Boston Post Road City/State/Zip: Weston/MA/02493

Phone No: 518 524 4338 Email: wcoffrin@vanguardrenewables.com (CC: development@vanguardrenewables.com)

b. ☐ Administrative Contact ☒ Technical Contact

Prefix: Dr. Full Name (Last/First Name): Miertschin/James

Title: Engineer Credential: PE

Phone No: 512 327 2708 Email: jm@jmaenv.com

Attachment: Click to enter text.

Item 6. Permit Contact Information (Instructions, Page 28)

Provide two names of individuals that can be contacted throughout the permit term.

a. Prefix: Mr. Full Name (Last/First Name): Coffrin/William

Title: Development Mgr Credential: Click to enter text.

Organization Name: Ellis AD 1, LLC

Mailing Address: 133 Boston Post Road City/State/Zip: Weston/MA/02493

Phone No: 518 524 4338 Email: wcoffrin@vanguardrenewables.com (CC: development@vanguardrenewables.com)

b. Prefix:Dr Full Name (Last/First Name): Miertschin/James

Title: Engineer Credential: PEClick to enter text.

Organization Name: James Miertschin & Assoc, Inc.Click to enter text.

Mailing Address: PO Box 162305 City/State/Zip: Austin/TX/78716

Phone No: 512 327 2708Click to enter text. Email: jm@jmaenv.comClick to enter text.

Attachment: Click to enter text.

Item 7. Billing Contact Information (Instructions, Page 28)

The permittee is responsible for paying the annual fee. The annual fee will be assessed for permits **in effect on September 1 of each year**. The TCEQ will send a bill to the address provided in this section. The permittee is responsible for terminating the permit when it is no longer needed (form TCEQ-20029).

Provide the complete mailing address where the annual fee invoice should be mailed and the name and phone number of the permittee's representative responsible for payment of the invoice.

Prefix: Mr. Full Name (Last/First Name): Coffrin/William

Title: Development Mgr Credential: Click to enter text.

Organization Name: Ellis AD 1, LLC

Mailing Address: 133 Boston Post Road City/State/Zip: Weston/MA/02493

Phone No: (781) 232-7597 ext. 4 Email: development@vanguardrenewables.com (CC: devaccounting@vanguardrenewables.com)

Item 8. DMR/MER Contact Information (Instructions, Page 28)

Provide the name and mailing address of the person delegated to receive and submit DMRs or MERs. **Note:** DMR data must be submitted through the NetDMR system. An electronic reporting account can be established once the facility has obtained the permit number.

Prefix: Mr. Full Name (Last/First Name): Coffrin/William

Title: Development Mgr Credential: Click to enter text.

Organization Name: Ellis AD 1, LLC

Mailing Address: 133 Boston Post Road City/State/Zip: Weston/MA/02493

Phone No: 518 524 4338 Email: development@vanguardrenewables.com

Item 9. Notice Information (Instructions, Pages 28)

a. Individual Publishing the Notices

Prefix: Mr. Full Name (Last/First Name): Coffrin/William

Title: Development Mgr Credential: Click to enter text.

Organization Name: Ellis AD 1, LLC

Mailing Address: 133 Boston Post Road City/State/Zip: Weston/MA/02493

Phone No: (781) 232-7597 ext. 4 Email: development@vanguardrenewables.com

b. Method for Receiving Notice of Receipt and Intent to Obtain a Water Quality Permit Package (only for NORI, NAPD will be sent via regular mail)

☒ E-mail: development@vanguardrenewables.com

☐ Fax: Click to enter text.

☒ Regular Mail (USPS)

Mailing Address: 133 Boston Post Road

City/State/Zip Code: Weston/MA/02493

c. Contact in the Notice

Prefix: Mr. Full Name (Last/First Name): Coffrin/William

Title: Development Mgr Credential: Click to enter text.

Organization Name: Ellis AD 1, LLC

Phone No: (781) 232-7597 ext. 4 Email: development@vanguardrenewables.com

d. Public Viewing Location Information

Note: If the facility or outfall is located in more than one county, provide a public viewing place for each county.

Public building name: Library, see below Location within the building: Click to enter text.

Physical Address of Building: Click to enter text.

City: Click to enter text. County: See attachment C

e. Bilingual Notice Requirements

This information is required for new, major amendment, minor amendment or minor modification, and renewal applications.

This section of the application is only used to determine if alternative language notices will be needed. Complete instructions on publishing the alternative language notices will be in your public notice package.

Call the bilingual/ESL coordinator at the nearest elementary and middle schools and obtain the following information to determine if an alternative language notice(s) is required.

1. Is a bilingual education program required by the Texas Education Code at the elementary or middle school nearest to the facility or proposed facility?

   ☒ Yes ☐ No

If no, publication of an alternative language notice is not required; skip to Item 8 (Regulated Entity and Permitted Site Information.)

2. Are the students who attend either the elementary school or the middle school enrolled in a bilingual education program at that school?

   ☒ Yes ☐ No

3. Do the students at these schools attend a bilingual education program at another location?

   ☐ Yes ☒ No

4. Would the school be required to provide a bilingual education program, but the school has waived out of this requirement under 19 TAC §89.1205(g)?

   ☐ Yes ☐ No ☒ N/A

5. If the answer is yes to question 1, 2, 3, or 4, public notices in an alternative language are required. Which language is required by the bilingual program? Spanish

f. Plain Language Summary Template – Complete the Plain Language Summary (TCEQ Form 20972) and include as an attachment. Attachment: D

g. Complete one Public Involvement Plan (PIP) Form (TCEQ Form 20960) for each application for a new permit or major amendment and include as an attachment. Attachment: E

Item 10. Regulated Entity and Permitted Site Information (Instructions Page 29)

a. TCEQ issued Regulated Entity Number (RN), if available: RNClick to enter text.

Note: If your business site is part of a larger business site, a Regulated Entity Number (RN) may already be assigned for the larger site. Use the RN assigned for the larger site. Search the TCEQ's Central Registry to determine the RN or to see if the larger site may already be registered as a Regulated Entity. If the site is found, provide the assigned RN.

b. Name of project or site (the name known by the community where located): Ellis AD 1

c. Is the location address of the facility in the existing permit the same?

☐ Yes ☐ No ☒ N/A (new permit)

Note: If the facility is located in Bexar, Comal, Hays, Kinney, Medina, Travis, Uvalde, or Williamson County, additional information concerning protection of the Edwards Aquifer may be required.

d. Owner of treatment facility:

Prefix: Click to enter text. Full Name (Last/First Name): Click to enter text.

or Organization Name: Ellis AD 1, LLC

Mailing Address: 133 Boston Post Road City/State/Zip: Weston/MA/02493

Phone No: (781) 232-7597 ext. 4 Email: development@vanguardrenewables.com

e. Ownership of facility: ☐ Public ☒ Private ☐ Both ☐ Federal

f. Owner of land where treatment facility is or will be: CREEK LAND AND CATTLE LLC

Prefix: Mr. Full Name (Last/First Name): Dance/Blair

or Organization Name: Click to enter text.

Mailing Address: 433 Las Colinas Blvd E, Suite 1290 City/State/Zip: Irving, Texas 75039-5058

Phone No: Click to enter text. Email: blair@dbco.cpa

Note: If not the same as the facility owner, attach a long-term lease agreement in effect for at least six years (In some cases, a lease may not suffice - see instructions). Attachment: F

g. Owner of effluent TLAP disposal site (if applicable): CREEK LAND AND CATTLE LLC/ ALLIANCE LAND & CATTLE, LLC

Prefix: Mr. Full Name (Last/First Name): Dance/Blair

or Organization Name: Click to enter text.

Mailing Address: 433 Las Colinas Blvd E, Suite 1290 City/State/Zip: Irving, Texas 75039-5058

Phone No: Click to enter text. Email: blair@dbco.cpa

Note: If not the same as the facility owner, attach a long-term lease agreement in effect for at least six years. Attachment: F

h. Owner of sewage sludge disposal site (if applicable):

Prefix: Click to enter text. Full Name (Last/First Name): Click to enter text.

or Organization Name: Click to enter text.

Mailing Address: Click to enter text. City/State/Zip: Click to enter text.

Phone No: Click to enter text. Email: Click to enter text.

Note: If not the same as the facility owner, attach a long-term lease agreement in effect for at least six years. Attachment: Click to enter text.

Item 11. TDPES Discharge/TLAP Disposal Information (Instructions, Page 31)

a. Is the facility located on or does the treated effluent cross Native American Land?

☐ Yes ☒ No

b. Attach an original full size USGS Topographic Map (or an 8.5"×11" reproduced portion for renewal or amendment applications) with all required information. Check the box next to each item below to confirm it has been included on the map.

☒ One-mile radius	☐ Three-miles downstream information
☒ Applicant's property boundaries	☒ Treatment facility boundaries
☐ Labeled point(s) of discharge	☐ Highlighted discharge route(s)
☒ Effluent disposal site boundaries	☒ All wastewater ponds
☐ Sewage sludge disposal site	☐ New and future construction

Attachment: G

c. Is the location of the sewage sludge disposal site in the existing permit accurate?

☐ Yes ☒ No or New Permit

If no, or a new application, provide an accurate location description: Click to enter text.

d. Are the point(s) of discharge in the existing permit correct?

☐ Yes ☒ No or New Permit

If no, or a new application, provide an accurate location description: Click to enter text.

e. Are the discharge route(s) in the existing permit correct?

☐ Yes ☒ No or New Permit

If no, or a new permit, provide an accurate description of the discharge route: Click to enter text.

f. City nearest the outfall(s): Click to enter text.

g. County in which the outfalls(s) is/are located: NA

h. Is or will the treated wastewater discharge to a city, county, or state highway right-of-way, or a flood control district drainage ditch?

☐ Yes ☒ No

If yes, indicate by a check mark if: ☐ Authorization granted ☐ Authorization pending

For new and amendment applications, attach copies of letters that show proof of contact and provide the approval letter upon receipt. Attachment: Click to enter text.

For all applications involving an average daily discharge of 5 MGD or more, provide the names of all counties located within 100 statute miles downstream of the point(s) of discharge: Click to enter text.

i. For TLAPs, is the location of the effluent disposal site in the existing permit accurate?

☐ Yes No or New Permit ☒ New Permit

If no, or a new application, provide an accurate location description: Click to enter text.

j. City nearest the disposal site: Click to enter text.

k. County in which the disposal site is located: Ellis, Navarro

l. For TLAPs, describe how effluent is/will be routed from the treatment facility to the disposal site: Liquid spreader tankers will route from the pond to the fields

m. For TLAPs, identify the nearest watercourse to the disposal site to which rainfall runoff might flow if not contained: Chambers Creek Segment 0814Click to enter text.

Item 12. Miscellaneous Information (Instructions, Page 33)

a. Did any person formerly employed by the TCEQ represent your company and get paid for service regarding this application?

☐ Yes ☒ No

If yes, list each person: Click to enter text.

b. Do you owe any fees to the TCEQ?

☐ Yes ☒ No

If yes, provide the following information:

Account no.: Click to enter text.

Total amount due: Click to enter text.

c. Do you owe any penalties to the TCEQ?

☐ Yes ☒ No

If yes, provide the following information:

Enforcement order no.: Click to enter text.

Amount due: Click to enter text.

Item 13. Signature Page (Instructions, Page 33)

Permit No: WQ000Click to enter text.

Applicant Name: Ellis AD 1, LLC

Certification: I, Kim Martin, certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

I further certify that I am authorized under 30 Texas Administrative Code §305.44 to sign and submit this document and can provide documentation in proof of such authorization upon request.

Signatory name (typed or printed): Kim Martin

Signatory title: VP of Development

Signature: _____ Date: 2/7/25
(Use blue ink)

Subscribed and Sworn to before me by the said KIM MARTIN

on this 7th day of February, 20 25.

My commission expires on the 23rd day of October, 20 26.

INDUSTRIAL WASTEWATER PERMIT APPLICATION ADMINISTRATIVE REPORT 1.1

The following information is required for new and amendment applications.

Item 1. Affected Landowner Information (Instructions, Page 35)

a. Attach a landowner map or drawing, with scale, as applicable. Check the box next to each item to confirm it has been provided.

☒ The applicant's property boundaries.

☒ The facility site boundaries within the applicant's property boundaries.

☒ The distance the buffer zone falls into adjacent properties and the property boundaries of the landowners located within the buffer zone.

☒ The property boundaries of all landowners surrounding the applicant's property. (Note: if the application is a major amendment for a lignite mine, the map must include the property boundaries of all landowners adjacent to the new facility (ponds).)

☐ The point(s) of discharge and highlighted discharge route(s) clearly shown for one mile downstream.

☐ The property boundaries of the landowners located on both sides of the discharge route for one full stream mile downstream of the point of discharge.

☐ The property boundaries of the landowners along the watercourse for a one-half mile radius from the point of discharge if the point of discharge is into a lake, bay, estuary, or affected by tides.

☒ The boundaries of the effluent disposal site (e.g., irrigation area or subsurface drainfield site) and all evaporation/holding ponds within the applicant's property.

☒ The property boundaries of all landowners surrounding the applicant's property boundaries where the effluent disposal site is located.

☐ The boundaries of the sludge land application site (for land application of sewage sludge for beneficial use) and the property boundaries of landowners within one-quarter mile of the applicant's property boundaries where the sewage sludge land application site is located.

☐ The property boundaries of landowners within one-half mile in all directions from the applicant's property boundaries where the sewage sludge disposal site (e.g., sludge surface disposal site or sludge monofil) is located.

Attachment: H

b. Check the box next to the format of the landowners list:

☐ Readable/Writeable CD ☒ Four sets of labels

Attachment: H

d. Provide the source of the landowners' names and mailing addresses: County Appraisal Districts

e. As required by Texas Water Code § 5.115, is any permanent school fund land affected by this application?

☐ Yes ☒ No

If yes, provide the location and foreseeable impacts and effects this application has on the land(s): Click to enter text.

Item 2. Original Photographs (Instructions, Page 37)

Provide original ground level photographs. Check the box next to each of the following items to indicate it is included.

☒ At least one original photograph of the new or expanded treatment unit location.

☐ At least two photographs of the existing/proposed point of discharge and as much area downstream (photo 1) and upstream (photo 2) as can be captured. If the discharge is to an open water body (e.g., lake, bay), the point of discharge should be in the right or left edge of each photograph showing the open water and with as much area on each respective side of the discharge as can be captured.

☒ At least one photograph of the existing/proposed effluent disposal site.

☒ A plot plan or map showing the location and direction of each photograph.

Attachment: I

INDUSTRIAL WASTEWATER PERMIT APPLICATION

SUPPLEMENTAL PERMIT INFORMATION FORM (SPIF)

This form applies to TPDES permit applications only. Complete and attach the Supplemental Permit information Form (SPIF) (TCEQ Form 20971).

Attachment: Click to enter text.

ATTACHMENT 1

INDIVIDUAL INFORMATION

Item 1. Individual information (Instructions, Page 38)

Complete this attachment if the facility applicant or co-applicant is an individual. Make additional copies of this attachment if both are individuals.

Prefix (Mr., Ms., or Miss): Click to enter text.

Full legal name (first, middle, and last): Click to enter text.

Driver's License or State Identification Number: Click to enter text.

Date of Birth: Click to enter text.

Mailing Address: Click to enter text.

City, State, and Zip Code: Click to enter text.

Phone No.: Click to enter text.

Fax No.: Click to enter text.

E-mail Address: Click to enter text.

CN: Click to enter text.

INDUSTRIAL WASTEWATER PERMIT APPLICATION CHECKLIST OF COMMON DEFICIENCIES

Below is a list of common deficiencies found during the administrative review of industrial wastewater permit applications. To ensure the timely processing of this application, please review the items below and indicate each item is complete and in accordance applicable rules at 30 TAC Chapters 21, 281, and 305 by checking the box next to the item. If an item is not required this application, indicate by checking N/A where appropriate. Please do not submit the application until all items below are addressed.

☐ Core Data Form (TCEQ Form No. 10400)
(Required for all applications types. Must be completed in its entirety and signed. Note: Form may be signed by applicant representative.)

☐ Correct and Current Industrial Wastewater Permit Application Forms
(TCEQ Form Nos. 10055 and 10411. Version dated 5/10/2019 or later.)

☐ Water Quality Permit Payment Submittal Form (Page 14)
(Original payment sent to TCEQ Revenue Section. See instructions for mailing address.)

☐ 7.5 Minute USGS Quadrangle Topographic Map Attached
(Full-size map if seeking "New" permit. 8 ½ x 11 acceptable for Renewals and Amendments.)

☐ N/A ☐ Current/Non-Expired, Executed Lease Agreement or Easement Attached

☐ N/A ☐ Landowners Map
(See instructions for landowner requirements.)

Things to Know:

- All the items shown on the map must be labeled.
- The applicant's complete property boundaries must be delineated which includes boundaries of contiguous property owned by the applicant.
- The applicant cannot be its own adjacent landowner. You must identify the landowners immediately adjacent to their property, regardless of how far they are from the actual facility.
- If the applicant's property is adjacent to a road, creek, or stream, the landowners on the opposite side must be identified. Although the properties are not adjacent to applicant's property boundary, they are considered potentially affected landowners. If the adjacent road is a divided highway as identified on the USGS topographic map, the applicant does not have to identify the landowners on the opposite side of the highway.

☐ N/A ☐ Landowners Cross Reference List
(See instructions for landowner requirements.)

☐ N/A ☐ Landowners Labels or CD-RW attached
(See instructions for landowner requirements.)

☐ Original signature per 30 TAC § 305.44 – Blue Ink Preferred
(If signature page is not signed by an elected official or principle executive officer, a copy of signature authority/delegation letter must be attached.)

☐ Plain Language Summary

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

INDUSTRIAL WASTEWATER PERMIT APPLICATION TECHNICAL REPORT 1.0

The following information **is required** for all applications for a TLAP or an individual TPDES discharge permit.

For **additional information** or clarification on the requested information, please refer to the Instructions for Completing the Industrial Wastewater Permit Application[1] available on the TCEQ website. Please contact the Industrial Permits Team at 512-239-4671 with any questions about this form.

If more than one outfall is included in the application, provide applicable information for each individual outfall. **If an item does not apply to the facility, enter N/A** to indicate that the item has been considered. Include separate reports or additional sheets as **clearly cross-referenced attachments** and provide the attachment number in the space provided for the item the attachment addresses.

NOTE: This application is for an industrial wastewater permit only. Additional authorizations from the TCEQ Waste Permits Division or the TCEQ Air Permits Division may be needed.

Item 1. Facility/Site Information (Instructions, Page 39)

a. Describe the general nature of the business and type(s) of industrial and commercial activities. Include all applicable SIC codes (up to 4).

Ellis AD 1, LLC will be developing, constructing, owning and operating an anaerobic digester. The proposed facility will produce renewable natural gas and an agricultural beneficial effluent called digestate. Primary SIC code = 4924; primary NAICS code = 221210

b. Describe all wastewater-generating processes at the facility.

There will be two anaerobic digesters at the facility. Feed to the digesters will be food waste slurry and manure. Biogas will be collected from the digesters. Liquid digestate is the effluent discharged from the digesters. Liquid digestate will be stored in the onsite lagoon.

[1] https://www.tceq.texas.gov/permitting/wastewater/industrial/TPDES_industrial_wastewater_steps.html

c. Provide a list of raw materials, major intermediates, and final products handled at the facility.

Materials List

Raw Materials	Intermediate Products	Final Products
Food waste	Biogas	Liquid fertilizer
Cow manure	Digestate	Renewable natural gas

Attachment: Click to enter text.

d. Attach a facility map (drawn to scale) with the following information:

- Production areas, maintenance areas, materials-handling areas, waste-disposal areas, and water intake structures.
- The location of each unit of the WWTP including the location of wastewater collection sumps, impoundments, outfalls, and sampling points, if significantly different from outfall locations.

Attachment: K

e. Is this a new permit application for an existing facility?

☐ Yes ☒ No

If **yes**, provide background discussion: Click to enter text.

f. Is/will the treatment facility/disposal site be located above the 100-year frequency flood level.

☒ Yes ☐ No

List source(s) used to determine 100-year frequency flood plain: FEMA

If **no**, provide the elevation of the 100-year frequency flood plain and describe what protective measures are used/proposed to prevent flooding (including tail water and rainfall run-on controls) of the treatment facility and disposal area: Click to enter text.

Attachment: L

g. For **new** or **major amendment** permit applications, will any construction operations result in a discharge of fill material into a water in the state?

☐ Yes ☒ No ☐ N/A (renewal only)

h. If **yes** to Item 1.g, has the applicant applied for a USACE CWA Chapter 404 Dredge and Fill permit?

☐ Yes ☐ No

If **yes**, provide the permit number: Click to enter text.

If **no**, provide an approximate date of application submittal to the USACE: Click to enter text.

Item 2. Treatment System (Instructions, Page 40)

a. List any physical, chemical, or biological treatment process(es) used/proposed to treat wastewater at this facility. Include a description of each treatment process, starting with initial treatment and finishing with the outfall/point of disposal.

Food waste and animal manure will be fed to two anaerobic digesters. Food waste will be sent to a hydrolysis tank prior to introduction to the digesters. The heated digester includes mixing to homogenize the waste. Biogas is produced in the digester. The digester is a biological process that uses microbes. End products are pipeline quality natural gas and liquid digestate. The digestate liquid will be land applied. Digestate liquid will be stored in an onsite lagoon.

b. Attach a flow schematic **with a water balance** showing all sources of water and wastewater flow into the facility, wastewater flow into and from each treatment unit, and wastewater flow to each outfall/point of disposal.

Attachment: M

Item 3. Impoundments (Instructions, Page 40)

Does the facility use or plan to use any wastewater impoundments (e.g., lagoons or ponds?)

☒ Yes ☐ No

If **no**, proceed to Item 4. If **yes**, complete **Item 3.a** for **existing** impoundments and **Items 3.a - 3.e** for **new or proposed** impoundments. **NOTE:** See instructions, Pages 40-42, for additional information on the attachments required by Items 3.a – 3.e.

a. Complete the table with the following information for each existing, new, or proposed impoundment. Attach additional copies of the Impoundment Information table, if needed.

Use Designation: Indicate the use designation for each impoundment as Treatment (**T**), Disposal (**D**), Containment (**C**), or Evaporation (**E**).

Associated Outfall Number: Provide an outfall number if a discharge occurs or will occur.

Liner Type: Indicate the liner type as Compacted clay liner (**C**), In-situ clay liner (**I**), Synthetic/plastic/rubber liner (**S**), or Alternate liner (**A**). **NOTE:** See instructions for further detail on liner specifications. If an alternate liner (A) is selected, include an attachment that provides a description of the alternate liner and any additional technical information necessary for an evaluation.

Leak Detection System: If any leak detection systems are in place/planned, enter **Y** for yes. Otherwise, enter **N** for no.

Groundwater Monitoring Wells and Data: If groundwater monitoring wells are in place/planned, enter **Y** for yes. Otherwise, enter **N** for no. Attach any existing groundwater monitoring data.

Dimensions: Provide the dimensions, freeboard, surface area, storage capacity of the impoundments, and the maximum depth (not including freeboard). For impoundments with irregular shapes, submit surface area instead of length and width.

Compliance with 40 CFR Part 257, Subpart D: If the impoundment is required to be in compliance with 40 CFR Part 257, Subpart D, enter **Y** for yes. Otherwise, enter **N** for no.

Date of Construction: Enter the date construction of the impoundment commenced (mm/dd/yy).

Impoundment Information

Parameter	**Pond # 1**	**Pond #**	**Pond #**	**Pond #**
Use Designation: (T) (D) (C) or (E)	C			
Associated Outfall Number	NA			
Liner Type (C) (I) (S) or (A)	C			
Alt. Liner Attachment Reference	NA			
Leak Detection System, Y/N	N			
Groundwater Monitoring Wells, Y/N	N			
Groundwater Monitoring Data Attachment	NA			
Pond Bottom Located Above The Seasonal High-Water Table, Y/N	Y			
Length (ft)	500			
Width (ft)	300			
Max Depth From Water Surface (ft), Not Including Freeboard	12			
Freeboard (ft)	2			
Surface Area (acres)	3.44			
Storage Capacity (gallons)	12,000,000			
40 CFR Part 257, Subpart D, Y/N	N			
Date of Construction	TBD			

Attachment: Click to enter text.

The following information (**Items 3.b – 3.e**) is required only for **new or proposed** impoundments.

b. For new or proposed impoundments, attach any available information on the following items. If attached, check **yes** in the appropriate box. Otherwise, check **no** or **not yet designed**.

1. Liner data

☐ Yes ☐ No ☒ Not yet designed

2. Leak detection system or groundwater monitoring data

☐ Yes ☒ No ☐ Not yet designed

3. Groundwater impacts

☐ Yes ☒ No ☐ Not yet designed

NOTE: Item b.3 is required if the bottom of the pond is not above the seasonal high-water table in the shallowest water-bearing zone.

Attachment: Click to enter text.

For TLAP applications: Items 3.c – 3.e are **not required**, continue to Item 4.

c. Attach a USGS map or a color copy of original quality and scale which accurately locates and identifies all known water supply wells and monitor wells within ½-mile of the impoundments.

Attachment: Click to enter text.

d. Attach copies of State Water Well Reports (e.g., driller's logs, completion data, etc.), and data on depths to groundwater for all known water supply wells including a description of how the depths to groundwater were obtained.

Attachment: Click to enter text.

e. Attach information pertaining to the groundwater, soils, geology, pond liner, etc. used to assess the potential for migration of wastes from the impoundments or the potential for contamination of groundwater or surface water.

Attachment: Click to enter text.

Item 4. Outfall/Disposal Method Information (Instructions, Page 42)

Complete the following tables to describe the location and wastewater discharge or disposal operations for each outfall for discharge, and for each point of disposal for TLAP operations.

If there are more outfalls/points of disposal at the facility than the spaces provided, copies of pages 6 and/0r numbered accordingly (i.e., page 6a, 6b, etc.) may be used to provide information on the additional outfalls.

For TLAP applications: Indicate the disposal method and each individual irrigation area **I**, evaporation pond **E**, or subsurface drainage system **S** by providing the appropriate letter designation for the disposal method followed by a numerical designation for each disposal area in the space provided for **Outfall** number (e.g. **E1** for evaporation pond 1, **I2** for irrigation area No. 2, etc.).

Outfall Longitude and Latitude

Outfall No.	Latitude (Decimal Degrees)	Longitude (Decimal Degrees)
	See Attachment N	

Outfall Location Description

Outfall No.	Location Description

Description of Sampling Point(s) (if different from Outfall location)

Outfall No.	Description of sampling point

Outfall Flow Information – Permitted and Proposed

Outfall No.	Permitted Daily Avg Flow (MGD)	Permitted Daily Max Flow (MGD)	Proposed Daily Avg Flow (MGD)	Proposed Daily Max Flow (MGD)	Anticipated Discharge Date (mm/dd/yy)

Outfall Discharge – Method and Measurement

Outfall No.	Pumped Discharge? Y/N	Gravity Discharge? Y/N	Type of Flow Measurement Device Used

Outfall Discharge – Flow Characteristics

Outfall No.	Intermittent Discharge? Y/N	Continuous Discharge? Y/N	Seasonal Discharge? Y/N	Discharge Duration (hrs/day)	Discharge Duration (days/mo)	Discharge Duration (mo/yr)

Outfall Wastestream Contributions

Outfall No. Click to enter text.

Contributing Wastestream	Volume (MGD)	Percent (%) of Total Flow

Outfall No. Click to enter text.

Contributing Wastestream	Volume (MGD)	Percent (%) of Total Flow
Digestate liquid	0.056224	100

Outfall No. Click to enter text.

Contributing Wastestream	Volume (MGD)	Percent (%) of Total Flow

Attachment: Click to enter text.

Item 5. Blowdown and Once-Through Cooling Water Discharges (Instructions, Page 43)

a. Indicate if the facility currently or proposes to:

☐ Yes ☒ No Use cooling towers that discharge blowdown or other wastestreams

☐ Yes ☒ No Use boilers that discharge blowdown or other wastestreams

☐ Yes ☒ No Discharge once-through cooling water

NOTE: If the facility uses or plans to use cooling towers or once-through cooling water, Item 12 **is required**.

b. If **yes** to any of the above, attach an SDS with the following information for each chemical additive.

- Manufacturers Product Identification Number
- Product use (e.g., biocide, fungicide, corrosion inhibitor, etc.)
- Chemical composition including CASRN for each ingredient
- Classify product as non-persistent, persistent, or bioaccumulative
- Product or active ingredient half-life
- Frequency of product use (e.g., 2 hours/day once every two weeks)
- Product toxicity data specific to fish and aquatic invertebrate organisms
- Concentration of whole product or active ingredient, as appropriate, in wastestream.

In addition to each SDS, attach a summary of the above information for each specific wastestream and the associated chemical additives. Specify which outfalls are affected.

Attachment: Click to enter text.

c. Cooling Towers and Boilers

If the facility currently or proposes to use cooling towers or boilers that discharge blowdown or other wastestreams to the outfall(s), complete the following table.

Cooling Towers and Boilers

Type of Unit	Number of Units	Daily Avg Blowdown (gallons/day)	Daily Max Blowdown (gallons/day)
Cooling Towers			
Boilers			

Item 6. Stormwater Management (Instructions, Page 44)

Will any existing/proposed outfalls discharge stormwater associated with industrial activities, as defined at *40 CFR § 122.26(b)(14)*, commingled with any other wastestream?

☐ Yes ☒ No

If **yes**, briefly describe the industrial processes and activities that occur outdoors or in a manner which may result in exposure of the activities or materials to stormwater: Click to enter text.

Item 7. Domestic Sewage, Sewage Sludge, and Septage Management and Disposal (Instructions, Page 44)

Domestic Sewage - Waste and wastewater from humans or household operations that is discharged to a wastewater collection system or otherwise enters a treatment works.

a. Check the box next to the appropriate method of domestic sewage and domestic sewage sludge treatment or disposal. Complete Worksheet 5.0 or Item 7.b if directed to do so.

☐ Domestic sewage is routed (i.e., connected to or transported to) to a WWTP permitted to receive domestic sewage for treatment, disposal, or both. Complete Item 7.b.

☐ Domestic sewage disposed of by an on-site septic tank and drainfield system. Complete Item 7.b.

☐ Domestic and industrial treatment sludge ARE commingled prior to use or disposal.

☐ Industrial wastewater and domestic sewage are treated separately, and the respective sludge IS NOT commingled prior to sludge use or disposal. Complete Worksheet 5.0.

☐ Facility is a POTW. Complete Worksheet 5.0.

☒ Domestic sewage is not generated on-site.

☐ Other (e.g., portable toilets), specify and Complete Item 7.b: Click to enter text.

b. Provide the name and TCEQ, NPDES, or TPDES Permit No. of the waste-disposal facility which receives the domestic sewage/septage. If hauled by motorized vehicle, provide the name and TCEQ Registration No. of the hauler.

Domestic Sewage Plant/Hauler Name

Plant/Hauler Name	Permit/Registration No.

Item 8. Improvements or Compliance/Enforcement Requirements (Instructions, Page 45)

a. Is the permittee currently required to meet any implementation schedule for compliance or enforcement?

☐ Yes ☒ No

b. Has the permittee completed or planned for any improvements or construction projects?

☐ Yes ☒ No

c. If **yes** to either 8.a **or** 8.b, provide a brief summary of the requirements and a status update: Click to enter text.

Item 9. Toxicity Testing (Instructions, Page 45)

Have any biological tests for acute or chronic toxicity been made on any of the discharges or on a receiving water in relation to the discharge within the last three years?

☐ Yes ☒ No

If **yes**, identify the tests and describe their purposes: Click to enter text.

Additionally, attach a copy of all tests performed which **have not** been submitted to the TCEQ or EPA. **Attachment:** Click to enter text.

Item 10. Off-Site/Third Party Wastes (Instructions, Page 45)

a. Does or will the facility receive wastes from off-site sources for treatment at the facility, disposal on-site via land application, or discharge via a permitted outfall?

☒ Yes ☐ No

If **yes**, provide responses to Items 10.b through 10.d below.

If **no**, proceed to Item 11.

b. Attach the following information to the application:

- List of wastes received (including volumes, characterization, and capability with on-site wastes).
- Identify the sources of wastes received (including the legal name and addresses of the generators).
- Description of the relationship of waste source(s) with the facility's activities.

Attachment: O

c. Is or will wastewater from another TCEQ, NPDES, or TPDES permitted facility commingled with this facility's wastewater after final treatment and prior to discharge via the final outfall/point of disposal?

☐ Yes ☒ No

If **yes**, provide the name, address, and TCEQ, NPDES, or TPDES permit number of the contributing facility and a copy of any agreements or contracts relating to this activity.

Attachment: Click to enter text.

d. Is this facility a POTW that accepts/will accept process wastewater from any SIU and has/is required to have an approved pretreatment program under the NPDES/TPDES program?

☐ Yes ☒ No

If **yes**, **Worksheet 6.0** of this application **is required**.

Item 11. Radioactive Materials (Instructions, Page 46)

a. Are/will radioactive materials be mined, used, stored, or processed at this facility?

☐ Yes ☒ No

If **yes**, use the following table to provide the results of one analysis of the effluent for all radioactive materials that may be present. Provide results in pCi/L.

Radioactive Materials Mined, Used, Stored, or Processed

Radioactive Material Name	Concentration (pCi/L)

Radioactive Material Name	Concentration (pCi/L)

b. Does the applicant or anyone at the facility have any knowledge or reason to believe that radioactive materials may be present in the discharge, including naturally occurring radioactive materials in the source waters or on the facility property?

☐ Yes ☒ No

If **yes**, use the following table to provide the results of one analysis of the effluent for all radioactive materials that may be present. Provide results in pCi/L. Do not include information provided in response to Item 11.a.

Radioactive Materials Present in the Discharge

Radioactive Material Name	Concentration (pCi/L)

Item 12. Cooling Water (Instructions, Page 46)

a. Does the facility use or propose to use water for cooling purposes?

☐ Yes ☒ No

If **no**, stop here. If **yes**, complete Items 12.b thru 12.f.

b. Cooling water is/will be obtained from a groundwater source (e.g., on-site well).

☐ Yes ☐ No

If **yes**, stop here. If **no**, continue.

c. Cooling Water Supplier

1. Provide the name of the owner(s) and operator(s) for the CWIS that supplies or will supply water for cooling purposes to the facility.

Cooling Water Intake Structure(s) Owner(s) and Operator(s)

CWIS ID				
Owner				
Operator				

2. Cooling water is/will be obtained from a Public Water Supplier (PWS)

☐ Yes ☐ No

If **no**, continue. If **yes**, provide the PWS Registration No. and stop here: PWS No. Click to enter text.

3. Cooling water is/will be obtained from a reclaimed water source?

☐ Yes ☐ No

If **no**, continue. If **yes**, provide the Reuse Authorization No. and stop here: Click to enter text.

4. Cooling water is/will be obtained from an Independent Supplier

☐ Yes ☐ No

If **no**, proceed to Item 12.d. If **yes**, provide the actual intake flow of the Independent Supplier's CWIS that is/will be used to provide water for cooling purposes and proceed: Click to enter text.

d. 316(b) General Criteria

1. The CWIS(s) used to provide water for cooling purposes to the facility has or will have a cumulative design intake flow of 2 MGD or greater.

☐ Yes ☐ No

2. At least 25% of the total water withdrawn by the CWIS is/will be used at the facility exclusively for cooling purposes on an annual average basis.

☐ Yes ☐ No

3. The CWIS(s) withdraw(s)/propose(s) to withdraw water for cooling purposes from surface waters that meet the definition of Waters of the United States in *40 CFR § 122.2*.

☐ Yes ☐ No

If **no**, provide an explanation of how the waterbody does not meet the definition of Waters of the United States in *40 CFR § 122.2*: Click to enter text.

If **yes** to all three questions in Item 12.d, the facility **meets** the minimum criteria to be subject to the full requirements of Section 316(b) of the CWA. Proceed to **Item 12.f**.

If **no** to any of the questions in Item 12.d, the facility **does not meet** the minimum criteria to be subject to the full requirements of Section 316(b) of the CWA; however, a determination is required based upon BPJ. Proceed to **Item 12.e**.

e. The facility does not meet the minimum requirements to be subject to the fill requirements of Section 316(b) **and uses**/proposes **to use cooling towers**.

☐ Yes ☐ No

If **yes**, stop here. If **no**, complete Worksheet 11.0, Items 1.a, 1.b.1-3 and 6, 2.b.1, and 3.a to allow for a determination based upon BPJ.

f. Oil and Gas Exploration and Production

1. The facility is subject to requirements at 40 CFR Part 435, Subparts A or D.

☐ Yes ☐ No

If **yes**, continue. If **no**, skip to Item 12.g.

2. The facility is an existing facility as defined at 40 CFR § 125.92(k) or a new unit at an existing facility as defined at 40 CFR § 125.92(u).

☐ Yes ☐ No

If **yes**, complete Worksheet 11.0, Items 1.a, 1.b.1-3 and 6, 2.b.1, and 3.a to allow for a determination based upon BPJ. If **no**, skip to Item 12.g.3.

g. Compliance Phase and Track Selection

1. Phase I – New facility subject to 40 CFR Part 125, Subpart I

☐ Yes ☐ No

If **yes**, check the box next to the compliance track selection, attach the requested information, and complete Worksheet 11.0, Items 2 and 3, and Worksheet 11.2.

☐ Track I – AIF greater than 2 MGD, but less than 10 MGD

- Attach information required by *40 CFR §§ 125.86(b)(2)-(4)*.

☐ Track I – AIF greater than 10 MGD

- Attach information required by *40 CFR § 125.86(b)*.

☐ Track II

- Attach information required by *40 CFR § 125.86(c)*.

Attachment: Click to enter text.

2. Phase II – Existing facility subject to 40 CFR Part 125, Subpart J

☐ Yes ☐ No

If **yes**, complete Worksheets 11.0 through 11.3, as applicable.

3. Phase III – New facility subject to 40 CFR Part 125, Subpart N

☐ Yes ☐ No

If **yes**, check the box next to the compliance track selection and provide the requested information.

☐ Track I – Fixed facility

- Attach information required by 40 CFR § 125.136(b) and complete Worksheet 11.0, Items 2 and 3, and Worksheet 11.2.

☐ Track I – Not a fixed facility

- Attach information required by 40 CFR § 125.136(b) and complete Worksheet 11.0, Item 2 (except CWIS latitude/longitude under Item 2.a).

☐ Track II – Fixed facility

- Attach information required by 40 CFR § 125.136(c) and complete Worksheet 11.0, Items 2 and 3.

Attachment: Click to enter text.

Item 13. Permit Change Requests (Instructions, Page 48)

This item is only applicable to existing permitted facilities.

a. Is the facility requesting a **major amendment** of an existing permit?

☐ Yes ☒ No

If **yes**, list each request individually and provide the following information: 1) detailed information regarding the scope of each request and 2) a justification for each request. Attach any supplemental information or additional data to support each request.

Click to enter text.

b. Is the facility requesting any **minor amendments** to the permit?

☐ Yes ☒ No

If **yes**, list and describe each change individually.

Click to enter text.

c. Is the facility requesting any **minor modifications** to the permit?

☐ Yes ☒ No

If **yes**, list and describe each change individually.

Click to enter text.

Item 14. Laboratory Accreditation (Instructions, Page 49)

All laboratory tests performed must meet the requirements of *30 TAC Chapter 25, Environmental Testing Laboratory Accreditation and Certification*, which includes the following general exemptions from National Environmental Laboratory Accreditation Program (NELAP) certification requirements:

- The laboratory is an in-house laboratory and is:

    - periodically inspected by the TCEQ; or
    - located in another state and is accredited or inspected by that state; or
    - performing work for another company with a unit located in the same site; or
    - performing pro bono work for a governmental agency or charitable organization.
- The laboratory is accredited under federal law.
- The data are needed for emergency-response activities, and a laboratory accredited under the Texas Laboratory Accreditation Program is not available.
- The laboratory supplies data for which the TCEQ does not offer accreditation.

The applicant should review *30 TAC Chapter 25* for specific requirements.

The following certification statement shall be signed and submitted with every application. See the *Signature Page* section in the Instructions, for a list of designated representatives who may sign the certification.

CERTIFICATION:

I certify that all laboratory tests submitted with this application meet the requirements of *30 TAC Chapter 25, Environmental Testing Laboratory Accreditation and Certification.*

Printed Name: NA not operating

INDUSTRIAL WASTEWATER PERMIT APPLICATION WORKSHEET 1.0: EPA CATEGORICAL EFFLUENT GUIDELINES

This worksheet **is required** for all applications for TPDES permits for discharges of wastewaters subject to EPA categorical effluent limitation guidelines (ELGs).

Item 1. Categorical Industries (Instructions, Page 53)

Is this facility subject to any 40 CFR categorical ELGs outlined on page 53 of the instructions?

☐ Yes ☒ No

If **no**, this worksheet is not required. If **yes**, provide the appropriate information below.

40 CFR Effluent Guideline

Industry	40 CFR Part

Item 2. Production/Process Data (Instructions, Page 54)

NOTE: For all TPDES permit applications requesting individual permit coverage for discharges of oil and gas exploration and production wastewater (discharges into or adjacent to water in the state, falling under the Oil and Gas Extraction Effluent Guidelines – 40 CFR Part 435), see Worksheet 12.0, Item 2 instead.

a. Production Data

Provide appropriate data for effluent guidelines with production-based effluent limitations.

Production Data

Subcategory	Actual Quantity/Day	Design Quantity/Day	Units

b. Organic Chemicals, Plastics, and Synthetic Fibers Manufacturing Data (40 CFR Part 414)

Provide each applicable subpart and the percent of total production. Provide data for metal-bearing and cyanide-bearing wastestreams, as required by *40 CFR Part 414, Appendices A and B*.

Percentage of Total Production

Subcategory	Percent of Total Production	Appendix A and B - Metals	Appendix A - Cyanide

c. Refineries (40 CFR Part 419)

Provide the applicable subcategory and a brief justification.

Click to enter text.

Item 3. Process/Non-Process Wastewater Flows (Instructions, Page 54)

Provide a breakdown of wastewater flow(s) generated by the facility, including both process and non-process wastewater flow(s). Specify which wastewater flows are to be authorized for discharge under this permit and the disposal practices for wastewater flows, excluding domestic, which are not to be authorized for discharge under this permit.

Click to enter text.

Item 4. New Source Determination (Instructions, Page 54)

Provide a list of all wastewater-generating processes subject to EPA categorical ELGs, identify the appropriate guideline Part and Subpart, and provide the date the process/construction commenced.

Wastewater Generating Processes Subject to Effluent Guidelines

Process	EPA Guideline Part	EPA Guideline Subpart	Date Process/ Construction Commenced

INDUSTRIAL WASTEWATER PERMIT APPLICATION WORKSHEET 2.0: POLLUTANT ANALYSIS

Worksheet 2.0 **is required** for all applications submitted for a TPDES permit. Worksheet 2.0 is not required for applications for a permit to dispose of all wastewater by land disposal or for discharges solely of stormwater associated with industrial activities.

Item 1. General Testing Requirements (Instructions, Page 55)

a. Provide the date range of all sampling events conducted to obtain the analytical data submitted with this application (e.g., 05/01/2018-05/30/2018): NA

b. ☐ Check the box to confirm all samples were collected no more than 12 months prior to the date of application submittal.

c. Read the general testing requirements in the instructions for important information about sampling, test methods, and MALs. If a contact laboratory was used, attach a list which includes the name, contact information, and pollutants analyzed for each laboratory/firm. **Attachment:** NA

Item 2. Specific Testing Requirements (Instructions, Page 56)

Attach correspondence from TCEQ approving submittal of less than the required number of samples, if applicable. **Attachment:** Click to enter text.

TABLE 1 and TABLE 2 (Instructions, Page 58)

Completion of Tables 1 and 2 is required for all external outfalls for all TPDES permit applications.

Table 1 for Outfall No.: Click to enter text. **Samples are (check one):** ☐ **Composite** ☐ **Grab**

Pollutant	**Sample 1 (mg/L)**	**Sample 2 (mg/L)**	**Sample 3 (mg/L)**	**Sample 4 (mg/L)**

TABLE 4 (Instructions, Pages 58-59)

Partial completion of Table 4 **is required** for each **external outfall** based on the conditions below.

a. **Tributyltin**

Is this facility an industrial/commercial facility which currently or proposes to directly dispose of wastewater from the types of operations listed below or a domestic facility which currently or proposes to receive wastewater from the types of industrial/commercial operations listed below?

☐ Yes ☐ No

If **yes**, check the box next to each of the following criteria which apply and provide the appropriate testing results in Table 4 below (check all that apply).

☐ Manufacturers and formulators of tributyltin or related compounds.

☐ Painting of ships, boats and marine structures.

☐ Ship and boat building and repairing.

☐ Ship and boat cleaning, salvage, wrecking and scaling.

☐ Operation and maintenance of marine cargo handling facilities and marinas.

☐ Facilities engaged in wood preserving.

☐ Any other industrial/commercial facility for which tributyltin is known to be present, or for which there is any reason to believe that tributyltin may be present in the effluent.

b. **Enterococci (discharge to saltwater)**

This facility discharges/proposes to discharge directly into saltwater receiving waters **and** Enterococci bacteria are expected to be present in the discharge based on facility processes.

☐ Yes ☐ No

Domestic wastewater is/will be discharged.

☐ Yes ☐ No

If **yes to either** question, provide the appropriate testing results in Table 4 below.

c. E. coli (discharge to freshwater)

This facility discharges/proposes to discharge directly into freshwater receiving waters **and** *E. coli* bacteria are expected to be present in the discharge based on facility processes.

☐ Yes ☐ No

Domestic wastewater is/will be discharged.

☐ Yes ☐ No

If **yes to either** question, provide the appropriate testing results in Table 4 below.

Table 4 for Outfall No.: Click to enter text. **Samples are (check one):** ☐ **Composite** ☐ **Grab**

Pollutant	**Sample 1**	**Sample 2**	**Sample 3**	**Sample 4**	**MAL**
Tributyltin (µg/L)					0.010
Enterococci (cfu or MPN/100 mL)					N/A
E. coli (cfu or MPN/100 mL)					N/A

TABLE 5 (Instructions, Page 59)

Completion of Table 5 **is required** for all **external outfalls** which discharge process wastewater from a facility which manufactures or formulates pesticides or herbicides or other wastewaters which may contain pesticides or herbicides.

If this facility does not/will not manufacture or formulate pesticides or herbicides and does not/will not discharge other wastewaters that may contain pesticides or herbicides, check N/A.

☐ N/A

TABLES 8, 9, 10, and 11 (Instructions, Page 60)

Completion of Tables 8, 9, 10, and 11 **is required** as specified in Table 7 for all **external outfalls** that contain process wastewater.

Completion of Tables 8, 9, 10, and 11 **may be required** for types of industry not specified in Table 7 for specific parameters that are believed to be present in the wastewater.

Table 8 for Outfall No.: Click to enter text. **Samples are (check one):** ☐ **Composite** ☐ **Grab**

TABLE 12 (DIOXINS/FURAN COMPOUNDS)

Complete of Table 12 **is required** for **external outfalls**, as directed below. (Instructions, Pages 59-60)

Indicate which compound(s) are manufactured or used at the facility and provide a brief description of the conditions of its/their presence at the facility (check all that apply).

- ☐ 2,4,5-trichlorophenoxy acetic acid (2,4,5-T) CASRN 93-76-5
- ☐ 2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5-TP) CASRN 93-72-1
- ☐ 2-(2,4,5-trichlorophenoxy) ethyl 2,2-dichloropropionate (Erbon) CASRN 136-25-4
- ☐ 0,0-dimethyl 0-(2,4,5-trichlorophenyl) phosphorothioate (Ronnel) CASRN 299-84-3
- ☐ 2,4,5-trichlorophenol (TCP) CASRN 95-95-4
- ☐ hexachlorophene (HCP) CASRN 70-30-4
- ☐ None of the above

Description: Click to enter text.

Does the applicant or anyone at the facility know or have any reason to believe that 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) or any congeners of TCDD may be present in the effluent proposed for discharge?

☐ Yes ☐ No

Description: Click to enter text.

If **yes** to either Items a **or** b, complete Table 12 as instructed.

Table 12 for Outfall No.: Click to enter text. **Samples are (check one):** ☐ **Composite** ☐ **Grab**

TABLE 13 (HAZARDOUS SUBSTANCES)

Complete Table 13 **is required** for all **external outfalls** as directed below. (Instructions, Pages 60-61)

Are there any pollutants listed in the instructions (pages 55-62) believed present in the discharge?

☐ Yes ☐ No

Are there pollutants listed in Item 1.c. of Technical Report 1.0 which are believed present in the discharge and have not been analytically quantified elsewhere in this application?

☐ Yes ☐ No

If **yes** to either Items a **or** b, complete Table 13 as instructed.

Table 13 for Outfall No.: Click to enter text. **Samples are (check one):** ☐ **Composite** ☐ **Grab**

INDUSTRIAL WASTEWATER PERMIT APPLICATION WORKSHEET 3.0: LAND APPLICATION OF EFFLUENT

This worksheet **is required** for all applications for a permit to disposal of wastewater by land application (i.e., TLAP)).

Item 1. Type of Disposal System (Instructions, Page 69)

Check the box next to the type of land disposal requested by this application:

- ☒ Irrigation
- ☐ Evaporation
- ☐ Evapotranspiration beds
- ☐ Drip irrigation system
- ☐ Subsurface application
- ☐ Subsurface soils absorption
- ☒ Surface application
- ☐ Other, specify: Click to enter text.

Item 2. Land Application Area (Instructions, Page 69)

Land Application Area Information

Effluent Application (gallons/day)	Irrigation Acreage (acres)	Describe land use & indicate type(s) of crop(s)	Public Access? (Y/N)
56,224 gpd ann avg	4553	Corn, bermuda	N

Item 3. Annual Cropping Plan (Instructions, Page 69)

Attach the required cropping plan that includes each of the following:

- Cool and warm season plant species
- Breakdown of acreage and percent of total acreage for each crop
- Crop growing season
- Harvesting method/number of harvests
- Minimum/maximum harvest height
- Crop yield goals
- Soils map
- Nitrogen requirements per crop
- Additional fertilizer requirements
- Supplemental watering requirements
- Crop salt tolerances
- Justification for not removing existing vegetation to be irrigated

Attachment:P

Item 4. Well and Map Information (Instructions, Page 70)

a. Check each box to confirm the required information is shown and labeled on the attached USGS map:

☒ The exact boundaries of the land application area

☒ On-site buildings

☒ Waste-disposal or treatment facilities

☒ Effluent storage and tailwater control facilities

☒ Buffer zones

☒ All surface waters in the state onsite and within 500 feet of the property boundaries

☒ All water wells within ½-mile of the disposal site, wastewater ponds, or property boundaries

☒ All springs and seeps onsite and within 500 feet of the property boundaries

Attachment: Q

b. List and cross reference all water wells located on or within 500 feet of the disposal site, wastewater ponds, or property boundaries in the following table. Attach additional pages as necessary to include all of the wells.

Well and Map Information Table

Well ID	Well Use	Producing? Y/N/U	Open, cased, capped, or plugged?	Proposed Best Management Practice
	See Q			

Attachment: Q

c. Groundwater monitoring wells or lysimeters are/will be installed around the land application site or wastewater ponds.

☐ Yes ☒ No

If **yes**, provide the existing/proposed location of the monitoring wells or lysimeters on the site map attached for Item 4.a. Additionally, attach information on the depth of the wells or lysimeters, sampling schedule, and monitoring parameters for TCEQ review, possible modification, and approval.

Attachment: Click to enter text.

d. Attach a short groundwater technical report using *30 TAC § 309.20(a)(4)* as guidance.
Attachment:Q

Item 5. Soil Map and Soil Information (Instructions, Page 71)

Check each box to confirm that the following information is attached:

a. ☒ USDA NRCS Soil Survey Map depicting the area to be used for land application with the locations identified by fields and crops.

b. ☒ Breakdown of acreage and percent of total acreage for each soil type.

c. ☒ Copies of laboratory soil analyses. **Attachment:** Click to enter text.

Item 6. Effluent Monitoring Data (Instructions, Page 72)

a. Completion of Table 14 **is required** for all **renewal** and **major amendment** applications. Complete the table with monitoring data for the previous two years for all parameters regulated in the current permit. An additional table has been provided with blank headers for parameters regulated in the current permit which are not listed in Table 14.

Table 14 for Outfall No.: NA **Samples are (check one):** ☐ **Composite** ☐ **Grab**

Date (mo/yr)	Daily Avg Flow (gpd)	BOD5 (mg/L)	TSS (mg/L)	Nitrogen (mg/L)	Conductivity (mmhos/cm)	Total acres irrigated	Hydraulic Application rate (acre-feet/month)

Date (mo/yr)	Daily Avg Flow (gpd)	BOD5 (mg/L)	TSS (mg/L)	Nitrogen (mg/L)	Conductivity (mmhos/cm)	Total acres irrigated	Hydraulic Application rate (acre-feet/month)

b. Use this table to provide effluent analysis for parameters regulated in the current permit which are not listed in Table 14.

Additional Parameter Effluent Analysis

Date (mo/yr)							

c. Attach an explanation of all persistent excursions to permitted parameters and corrective actions taken. **Attachment:** Click to enter text.

Item 7. Pollutant Analysis (Instructions, Page 72)

a. Provide the date range of all sampling events conducted to obtain the analytical data submitted with this application (e.g., 05/01/2018-05/30/2018): NA

b. ☐ Check the box to confirm all samples were collected no more than 12 months prior to the date of application submittal.

c. Complete Tables 15 and 16.

Table 15 for Outfall No.: Click to enter text. **Samples are (check one):** ☐ **Composite** ☐ **Grab**

INDUSTRIAL WASTEWATER PERMIT APPLICATION WORKSHEET 3.1: SURFACE LAND APPLICATION AND APPLICATION

This worksheet **is required** for all applications for a permit to disposal of wastewater by surface land application or evaporation.

Item 1. Edwards Aquifer (Instructions, Page 73)

a. Is the facility subject to *30 TAC Chapter 213*, Edwards Aquifer Rules?

☐ Yes ☒ No

If **no**, proceed to Item 2. If **yes**, complete Items 1.b **and** 1.c.

b. Check the box next to the subchapter applicable to the facility.

☐ 30 TAC Chapter 213, Subchapter A

☐ 30 TAC Chapter 213, Subchapter B

c. If *30 TAC Chapter 213, Subchapter A* applies, attach **either**: 1) a Geologic Assessment (if conducted in accordance with *30 TAC § 213.5*) **or** 2) a report that contains the following:

- A description of the surface geological units within the proposed land application site and wastewater pond area.
- The location and extent of any sensitive recharge features in the land application site and wastewater pond area
- A list of any proposed BMPs to protect the recharge features.

Attachment: Click to enter text.

Item 2. Surface Spray/Irrigation (Instructions, Page 73)

a. Provide the following information on the irrigation operations:

Area under irrigation (acres): 4553

Design application rate (acre-ft/acre/yr): 0.022

Design application frequency (hours/day): 24

Design application frequency (days/week): 7

Design total nitrogen loading rate (lbs nitrogen/acre/year): 118.4

Average slope of the application area (percent): 4

Maximum slope of the application area (percent): 8

Irrigation efficiency (percent): 85

Effluent conductivity (mmhos/cm): 15

Soil conductivity (mmhos/cm): 4

Curve number: 74.3

Describe the application method and equipment: liquid spreader tankers

b. Attach a detailed engineering report which includes a water balance, storage volume calculations, and a nitrogen balance. **Attachment:** S

Item 3. Evaporation Ponds (Instructions, Page 74)

a. Daily average effluent flow into ponds: Click to enter text. gallons per day

b. Attach a separate engineering report of evaporation calculations for average long-term and worst-case critical conditions. **Attachment:** Click to enter text.

Item 4. Evapotranspiration Beds (Instructions, Page 74)

a. Provide the following information on the evapotranspiration beds:

Number of beds: Click to enter text.

Area of bed(s) (acres): Click to enter text.

Depth of bed(s) (feet): Click to enter text.

Void ratio of soil in the beds: Click to enter text.

Storage volume within the beds (include units): Click to enter text.

Description of any lining to protect groundwater: Click to enter text.

b. Attach a certification by a licensed Texas professional engineer that the liner meets TCEQ requirements. **Attachment:** Click to enter text.

c. Attach a separate engineering report with water balance, storage volume calculations, and description of the liner. **Attachment:** Click to enter text.

Item 5. Overland Flow (Instructions, Page 74)

a. Provide the following information on the overland flow:

Area used for application (acres): Click to enter text.

Slopes for application area (percent): Click to enter text.

Design application rate (gpm/foot of slope width): Click to enter text.

Slope length (feet): Click to enter text.

Design BOD5 loading rate (lbs BOD5/acre/day): Click to enter text.

Design application frequency (hours/day): Click to enter text.

Design application frequency (days/week): Click to enter text.

b. Attach a separate engineering report with the method of application and design requirements according to *30 TAC § 217.212*. **Attachment:** Click to enter text.

PLAIN LANGUAGE SUMMARY

Ellis AD 1, LLC plans to develop Ellis AD 1. Ellis AD 1 is a proposed anaerobic digestion facility located on the north side of Austonia Road, 1200 feet west of the intersection of Austonia Road and Armstrong Road, in Ellis County, Texas 75119. Ellis AD 1, LLC will be developing, constructing, owning and operating Ellis AD 1. The proposed facility will produce renewable natural gas and agricultural beneficial by-products.

This permit will not authorize a discharge of pollutants into waters of the state.

Anaerobic digestion is a process by which organic material, such as animal manure and food waste, is broken down by microbes in an enclosed environment to produce biogas. By combining food waste and manure, a smaller volume of manure can create enough biogas to make the system viable. Each digester tank will receive material from the hydrolysis tanks on a regular schedule. Materials transferred from the hydrolysis tanks to the digester tanks will include the food waste slurry. Manure will be transferred into the AD tank by tanker trucks as needed to maintain gas production. Once material is transferred into the digestion tank, it will be homogenized using mixers. In the digester the homogenous mix of manure and food waste is heated and resides in the tank for several days. While in the tanks, microbes break down the mixture in an anaerobic environment, resulting in the production of biogas, which is a combination of methane, carbon dioxide, hydrogen gas, and water vapor. The biogas that is collected in the headspace of the digesters will be routed through a gas conditioning, and upgrading system to remove impurities. This will result in pipeline quality natural gas. Digestate is the effluent discharged from the digesters. The digester tanks have a finite capacity, and as more organic waste, manure, or food waste is added, the processed material within the tanks needs to be removed. The removal of digestate from the digesters will occur throughout the day as needed to reduce the volume of material within the digester tanks. This material will be a nutrient-rich liquid digestate. The liquid digestate is stored in the onsite lagoon. The liquid will be applied to agricultural fields for crop fertilization

Public Involvement Plan Form for Permit and Registration Applications

The Public Involvement Plan is intended to provide applicants and the agency with information about how public outreach will be accomplished for certain types of applications in certain geographical areas of the state. It is intended to apply to new activities; major changes at existing plants, facilities, and processes; and to activities which are likely to have significant interest from the public. This preliminary screening is designed to identify applications that will benefit from an initial assessment of the need for enhanced public outreach.

All applicable sections of this form should be completed and submitted with the permit or registration application. For instructions on how to complete this form, see TCEQ-20960-inst.

Section 1. Preliminary Screening

☒ New Permit or Registration Application

☐ New Activity – modification, registration, amendment, facility, etc. (see instructions)

If neither of the above boxes are checked, completion of the form is not required and does not need to be submitted.

Section 2. Secondary Screening

☒ Requires public notice,

☐ Considered to have significant public interest, **and**

☐ Located within any of the following geographical locations:

- Austin
- Dallas
- Fort Worth
- Houston
- San Antonio
- West Texas
- Texas Panhandle
- Along the Texas/Mexico Border
- Other geographical locations should be decided on a case-by-case basis

If all the above boxes are not checked, a Public Involvement Plan is not necessary. Stop after Section 2 and submit the form.

☒ Public Involvement Plan not applicable to this application. Provide **brief** explanation.

Normal public notice publication should be adequate for TLAP application.

Section 3. Application Information

Type of Application (check all that apply):

Air ☐ Initial ☐ Federal ☐ Amendment ☐ Standard Permit ☐ Title V

Waste ☐ Municipal Solid Waste ☐ Industrial and Hazardous Waste ☐ Scrap Tire
☐ Radioactive Material Licensing ☐ Underground Injection Control

Water Quality

☐ Texas Pollutant Discharge Elimination System (TPDES)

☒ Texas Land Application Permit (TLAP)

☐ State Only Concentrated Animal Feeding Operation (CAFO)

☐ Water Treatment Plant Residuals Disposal Permit

☐ Class B Biosolids Land Application Permit

☐ Domestic Septage Land Application Registration

Water Rights New Permit

☐ New Appropriation of Water

☐ New or existing reservoir

Amendment to an Existing Water Right

☐ Add a New Appropriation of Water

☐ Add a New or Existing Reservoir

☐ Major Amendment that could affect other water rights or the environment

Section 4. Plain Language Summary

Provide a brief description of planned activities.

This site will have anaerobic digesters to produce renewable natural gas from food waste and animal manure.

Section 5. Community and Demographic Information

Community information can be found using EPA's EJ Screen, U.S. Census Bureau information, or generally available demographic tools.

Information gathered in this section can assist with the determination of whether alternative language notice is necessary. Please provide the following information.

(City)

(County)

(Census Tract)
Please indicate which of these three is the level used for gathering the following information.

☐ City ☐ County ☐ Census Tract

(a) Percent of people over 25 years of age who at least graduated from high school

(b) Per capita income for population near the specified location

(c) Percent of minority population and percent of population by race within the specified location

(d) Percent of Linguistically Isolated Households by language within the specified location

(e) Languages commonly spoken in area by percentage

(f) Community and/or Stakeholder Groups

(g) Historic public interest or involvement

Section 6. Planned Public Outreach Activities

(a) Is this application subject to the public participation requirements of Title 30 Texas Administrative Code (30 TAC) Chapter 39?

☒ Yes ☐ No

(b) If yes, do you intend at this time to provide public outreach other than what is required by rule?

☐ Yes ☒ No

If Yes, please describe.

If you answered "yes" that this application is subject to 30 TAC Chapter 39, answering the remaining questions in Section 6 is not required.

(c) Will you provide notice of this application in alternative languages?

☐ Yes ☐ No

Please refer to Section 5. If more than 5% of the population potentially affected by your application is Limited English Proficient, then you are required to provide notice in the alternative language.

If yes, how will you provide notice in alternative languages?

☐ Publish in alternative language newspaper

☐ Posted on Commissioner's Integrated Database Website

☐ Mailed by TCEQ's Office of the Chief Clerk

☐ Other (specify)

(d) Is there an opportunity for some type of public meeting, including after notice?

☐ Yes ☐ No

(e) If a public meeting is held, will a translator be provided if requested?

☐ Yes ☐ No

(f) Hard copies of the application will be available at the following (check all that apply):

☐ TCEQ Regional Office ☐ TCEQ Central Office

☐ Public Place (specify)

Section 7. Voluntary Submittal

For applicants voluntarily providing this Public Involvement Plan, who are not subject to formal public participation requirements.

Will you provide notice of this application, including notice in alternative languages?

☐ Yes ☐ No

What types of notice will be provided?

☐ Publish in alternative language newspaper

☐ Posted on Commissioner's Integrated Database Website

☐ Mailed by TCEQ's Office of the Chief Clerk

☐ Other (specify)

Proposed Bore hole, 15 Nos.

Total Acreage used in this layout is 25 Acres

NOTES:–

1. ALL DIMENSIONS ARE IN 'FEET AND INCHES'.
2. One Utility connection service.
3. Layout revisions shall be done as per geotech results.
4. Setback details.
   - 50'–100' From property lines
   - 100'–300' From M&R
   - 100'–300' From Manure storage
   - 50'–100' From roadways
   - 10'–25' From Existing Easement
   - Private well, 150' From a water well.
   - Private well, 300'From surface water.
   - Public well, 150' From a water well.
   - Public well, 300'From surface water.
   - 200'–300' From Occupied Buildings/Dwellings
   - 50'–300' Flare setback from property line
5. Deox equipment is added to this site.
6. AD only site.

ASSUMPTIONS:

1. M&R station size considered as 100'x100'
2. Lagoon storage is assumed as 6 months,equivalent to 12 MGALS.
3. Height restriction are none for industrial building.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 1/24/2025 at 1:30 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

ATTACHMENT O

Volume and Type of Incoming Feedstock

Ellis AD 1, LLC estimates a capacity to digest approximately 139,712 tons of feed stock per year ("tpy"). The total volume and percentage of each source will fluctuate based on availability and needs of the digester. A summary of the proposed waste categories is as follows:

Category 1: Agricultural Inputs (Manure)

Description: The facility will accept manure from nearby CAFOs in order to effectuate gas production within the anaerobic digesters. The amount of manure will be determined by the actual gas production levels throughout operation of the digesters.

Anticipated Quantity: 0 tpy (manure will be accepted on as-needed basis)

Category 2: Organic Slurry

Description: The facility will be partnered with a nearby organics receiving area (ORA) facility which will supply the organic slurry. This ORA facility is designed to accept, de-package, and pre-process off-specification, expired, or otherwise unsalable food products, as well as organic streams, such as uneaten food from restaurants and other source-separated organics. The organic materials come primarily from manufacturers, food distribution facilities, and retailers. These organics will pass through mechanical separator, which removes the organic materials from its packaging, and pumped/stored into a closed holding tank onsite.

The organic slurry produced at the ORA facility will be pumped from the holding tanks onsite directly into tanker trucks, which will deliver the material to Ellis AD 1, LLC for the further processing of the organics into renewable natural gas and liquid digestate.

Anticipated Quantity: 85,380 tpy

Category 3: Liquid Organics

Description: Liquid organic wastes are liquid streams with relatively high organic content that are received in tanker trucks. These wastes are received directly from the Food Industry and do not have any pre-processing before being mixed with other feedstock and sent to the AD. Examples include rejected batches of soda, beer, juices, or soups to name a few.

Anticipated Quantity: 26,232 tpy

Category 4: High Strength Wastes (FOG)

Description: This is a liquid waste generated as a by-product of the food industry or at restaurants. It is mainly composed of fatty acids. FOG would be collected from grease traps in commercial establishments such as hospitals, hotels, restaurants, and school cafeterias; if available, FOG material can also be collected from residential and industrial producers.

Anticipated Quantity: 24,868 tpy

Category 5: Other (Glycerin)

Description: Glycerin is a high-strength organic waste that is generated as a by-product of processing animal fats and vegetable oils. It is also delivered by tanker trucks.

Anticipated Quantity: 3,232 TPY

ATTACHMENT P

ANNUAL CROPPING PLAN

OVERVIEW

The proposed irrigation fields total 4553.8 acres and are located in Ellis County and Navarro County.

COVER CROPS

The proposed cover crops for the site are corn grain (84.2%), coastal bermuda (15.0%), and sorghum-sudan hay (0.8%). A detailed list of the cover crops to be utilized on each field along with their acreages and projected crop yields is provided in Table 1. The crops will be intensively managed for maximum production. The stated crop yield goals are taken from NRCS in concert with information provided by the farmer. Management practices are in place and used by the farmer to ensure maximized crop production.

GROWING SEASON

The proposed cover crops are primarily warm season plant species although coastal bermuda can continue to grow in the cool season. The growing season of corn grain and sorghum-sudan hay is basically April through July. The growing season of the coastal bermuda is year-around with the most productive months being from April through October.

HARVESTING

The precise method and schedule for harvesting will depend on climatic conditions, but only one harvest of corn per year is planned. The coastal bermudagrass will be maintained continuously by grazing or by three cuttings per year.

NUTRIENTS

One of the primary purposes for obtaining this TLAP is to reduce or eliminate the crop requirement needs for nitrogen from supplemental commercial fertilizer and replace it with nitrogen from the high-nitrogen digestate liquid. It is hoped that the nitrogen requirements of the crops will be provided almost entirely by the nitrogen content in the effluent only. Table 1 shows the nutrients requirements, the maximum application rates so as to not exceed the nutrient requirements, and the application rates if the irrigation water is applied evenly over all fields. Because the amount of acreage available exceeds the amount of land required, the application rates will vary depending on the soil tests and on which fields application is actually occurring. The fields will be managed to that the application rate never exceeds the nutrient requirements. Supplemental fertilizers may be needed to achieve yield goals, but determinations will be made annually on a field-by-field basis using soil test results. Based on the effluent pH, EC and sodium content, soil amendments such as elemental sulfur, gypsum or other inputs may be used to help manage soil pH and salinity.

IRRIGATION

The liquid digestate will be applied to the land application fields via liquid spreader tankers. This is a practical method to distribute the relatively small amount of liquid targeted for each field. The application rate is projected to be 0.0325 ac-ft/ac/yr (which can be converted to 10,592 gal/acre-year). The irrigation efficiency is estimated at 85%. Although the amount of irrigation from the digestate is relatively small, no additional irrigation water is expected to be necessary. The water needs of the crops will be provided primarily by rainfall as farmer has relied upon for years.

SOILS

The 50 land application areas are comprised of 32 principal soil groups. Collectively, the land application areas consist predominantly of hydrologic group D soils (91.06%) with a smaller percentage of hydrologic group C (8.81%) and group B (0.13%) soils. A soil map and detailed soil description are provided in a separate soils report.

SALT TOLERANCES

The primary crop is corn which is a relatively non-tolerant crop for salt. The other predominant crop is coastal bermudagrass which is documented to be a highly salt tolerant crop. To be conservative, the maximum soil conductivity in this analysis was based on the corn crop and utilized a maximum conductivity of 4 mmhos/cm. Because the irrigation volume of liquid is low compared to amount of available field area, the annual irrigation rate is relatively small (i.e., 0.39 in/ac/yr). The lowest annual rainfall over the 25-year period analyzed was 22.29 inches. Hence, the salt concentration in the root zone is expected to be controlled by leaching from rainfall events.

Notes

(1) Planned crop and projected yields based on farmer's planned crops and yields from prior years.
(2) Crop requirements taken from NRCS 590-633 software alternative crops.
(3) Wastewater N and P estimated from facilities with similar operations.
(4) Availability of N estimated utilizing 80%.
(5) Maximum irrigation rate based on not exceeding the crop nitrogen requirement
(6) Projected irrigation rate based on irrigated water being applied evenly over all fields.

WORKSHEET 3.0 – ITEM 4.d
GROUNDWATER TECHNICAL REPORT

THORNHILL GROUP, INC.

1 Purpose

The purpose of this section is to provide information on the geologic features and groundwater resources in the area of the Ellis AD 1, LLC property and the proposed properties for the application of the liquid digestate.

2 Surface Geology Map

Figure 1, Surface Geology Map, shows the geologic formations at the surface across the subject properties.

3 Surface Geology

The subject properties lie within the Texas Blackland Prairie general soil grouping. The subject properties cover a large area and therefore encompass many different soils. The soils can be generally characterized as being formed on level to gently rolling plains from calcareous shales or interbedded sandstone and shale. The clayey soils generally have high shrink-swell properties. According to the Geologic Atlas of Texas (Waco Sheet,1970) the subject properties are underlain by either the Ozan Formation (lower Taylor Marl) or Wolfe City Formation of the Taylor Group or alluvial and fluviatile terrace deposits (see Figure 1). The Ozan Formation mostly consists of calcareous clay with silt and sand content increasing upward. It grades upward to the Wolfe City Formation which consists mostly of marl, sand, sandstone, and mudstone. The Wolfe City Formation includes thin calcareous sandstone interbedded with thick calcareous marl. Thickness of the Taylor Group can be 500 feet or more. Alluvium and fluviatile terrace deposits along streams include sand, silt, clay, and gravel of various thicknesses.

4 Local Aquifers

Although the Taylor Group is not considered an aquifer, locally, small domestic wells can be completed into the Ozan Formation or Wolfe City Formation, particularly the glauconitic sandstone that can be found in the Wolfe City Formation. Additionally, some domestic wells are completed into alluvial deposits along stream channels.

The Woodbine Aquifer is the only minor aquifer as defined by the TWDB, that is within the area of the subject properties which is comprised of the Woodbine Formation (see Figure 2). It mostly consists of thin- to massive-bedded sandstone with interbeds of shale. The Woodbine Formation is separated from the overlying Taylor Group by the Austin Chalk and Eagle Ford Shale which mostly consist of limestone and chalk with interbeds of shale and sandstone. Locally, the Woodbine Aquifer is about 1,000 feet BGL. The Woodbine Aquifer is the most prevalent aquifer used, locally, for domestic and non-domestic wells.

The only major aquifer, as defined by the Texas Water Development Board (TWDB), present across the subject properties is the Trinity Aquifer. The Trinity Aquifer consists of the Paluxy Sand, Glen Rose Limestone, Travis Peak (Pearsall) Formation, and Hosston Formation (see Figure 2). The aquifer is primarily composed of sand with interbeds of clay, shale, or silt. The Glen Rose Limestone is primarily composed of limestone. Within southern Ellis and northern Navarro counties, the top of the Trinity Aquifer is about 3,000 feet below ground level (bgl). The Trinity and Woodbine aquifers are separated by the Washita and Fredericksburg Groups. Due to its depth few wells are completed to produce from the Trinity Aquifer, locally.

For the aquifers within the subject area, recharge occurs primarily through infiltration of precipitation in the outcrop areas of the different aquifers. Actual recharge to the formation is minor compared to the total precipitation across the respective outcrops and most of the precipitation is lost from the formation due to runoff downstream or evapotranspiration. Additionally, groundwater recharge occurs between formations as leakage from one formation to another.

Water quality for the different potential sources of groundwater varies, but generally, the groundwater produced from wells within Ellis and Navarro counties is fresh to slightly saline with total dissolved solids concentrations from less than 500 milligram per liter (mg/l) to greater than 1,000 mg/l. The lower concentration of TDS is usually restricted to the shallower or outcrop portion of the formation and TDS increases with depth.

5 Water Wells

All water wells within a 500-foot radius of the subject properties are identified in Table 1. Figure 3 shows the location of the wells within a 500-foot radius.

SOILS REPORT
EFFLUENT IRRIGATION SYSTEM

Soil maps for the irrigation areas are shown in Figures 1-7. Individual irrigation tracts are referred to as land management units (LMUs). Current irrigation areas include 50 LMUs as shown in these figures. Soils mapping was based upon file information provided by the NRCS online soil survey database (https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx). The 50 LMUs are characterized by 33 general soil groups as shown in the following table:

TABLE 1 – LIST OF GENERAL SOIL GROUPS

County	Symbol	Soil Name	Acres	% of Total
Ellis	BtB	Burleson clay, 1 to 3 percent slopes	200.8	4.4%
Ellis	BuA	Burleson clay, 0 to 1 percent slopes	106.2	2.3%
Ellis	Fs	Frio silty clay, 0 to 1 percent slopes, occasionally flooded	272.2	6.0%

A general description of the major soil component within a soil map unit is provided below along with percentages of minor components:

ELLIS COUNTY

BtB - Burleson clay, 1 to 3 percent slopes

Component: Burleson (85%)

The Burleson component makes up 85 percent of the map unit. Slopes are 1 to 3 percent. This component is on circular gilgai on broad stream terraces on river valleys. The parent material consists of calcareous clayey alluvium of Pleistocene age derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 3e. Irrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 9 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Wilson (8%)

Component: Branyon (7%)

BuA - Burleson clay, 0 to 1 percent slopes

Component: Burleson (90%)

The Burleson component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on circular gilgai on broad stream terraces on river valleys. The parent material consists of calcareous clayey alluvium of Pleistocene age derived from mixed sources. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 2s. Irrigated land capability classification is 2s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 9 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Wilson (5%)

Component: Branyon (5%)

Fs - Frio silty clay, 0 to 1 percent slopes, occasionally flooded

Component: Frio, occasionally flooded (85%)

The Frio, occasionally flooded component makes up 85 percent of the map unit. Slopes are 0 to 1 percent. This component is on flood plains on dissected plains. The parent material consists of Calcareous loamy alluvium derived from mudstone over clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is occasionally flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY012TX Loamy Bottomland ecological site. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 24 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Tinn, occasionally flooded (10%)

Component: Oakalla, occasionally flooded (5%)

Gp - Gravel pits

Component: Pits, gravel (100%)
The Pits is a minor miscellaneous area.

HaA - Houston Black clay, 0 to 1 percent slopes

Component: Houston Black (85%)
The Houston Black component makes up 85 percent of the map unit. Slopes are 0 to 1 percent. This component is on linear gilgai on plains on dissected plains. The parent material consists of clayey residuum weathered from calcareous mudstone of Upper Cretaceous Age. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 25 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Wilson (8%)

Component: Heiden (7%)

HaB - Houston Black clay, 1 to 3 percent slopes

Component: Houston Black (80%)
The Houston Black component makes up 80 percent of the map unit. Slopes are 1 to 3 percent. This component is on linear gilgai on ridges on dissected plains. The parent material consists of clayey residuum weathered from calcareous mudstone of Upper Cretaceous Age. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 25 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Heiden (15%)

Component: Fairlie (5%)

HbA - Branyon clay, 0 to 1 percent slopes

Component: Branyon (85%)
The Branyon component makes up 85 percent of the map unit. Slopes are 0 to 1 percent. This component is on circular gilgai on stream terraces on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone of Pleistocene age. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 9 percent. There are no saline

horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Burleson (5%)

Component: Lewisville (5%)

Component: Houston Black (5%)

HbB - Branyon clay, 1 to 3 percent slopes

Component: Branyon (85%)
The Branyon component makes up 85 percent of the map unit. Slopes are 1 to 3 percent. This component is on circular gilgai on stream terraces on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone of Pleistocene age. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 9 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Lewisville (5%)

Component: Burleson (5%)

Component: Houston Black (5%)

HcC2 - Heiden clay, 3 to 5 percent slopes, eroded

Component: Heiden, moderately eroded (85%)
The Heiden, moderately eroded component makes up 85 percent of the map unit. Slopes are 3 to 5 percent. This component is on ridges on dissected plains. The parent material consists of clayey residuum weathered from mudstone. Depth to a root restrictive layer, densic material, is 40 to 65 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY009TX Southern Eroded Blackland ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 14 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 7 within 30 inches of the soil surface.

Component: Houston Black (10%)

Component: Ferris, severely eroded (5%)

HcD2 - Heiden clay, 5 to 8 percent slopes, eroded

Component: Heiden, moderately eroded (85%)
The Heiden, moderately eroded component makes up 85 percent of the map unit. Slopes are 5 to 8 percent. This component is on ridges on dissected plains. The parent material consists of clayey residuum weathered from mudstone. Depth to a root restrictive layer, densic material, is 40 to 65 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic

matter content in the surface horizon is about 3 percent. This component is in the R086AY009TX Southern Eroded Blackland ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 14 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 7 within 30 inches of the soil surface.

Component: Ferris, moderately eroded (10%)

Component: Heiden, severely eroded (5%)

HsD3 - Heiden-Ferris complex, 5 to 8 percent slopes, severely eroded

Component: Heiden, severely eroded (65%)
The Heiden, severely eroded component makes up 65 percent of the map unit. Slopes are 5 to 8 percent. This component is on linear gilgai on ridges on dissected plains. The parent material consists of clayey residuum weathered from clayey shale of Eagleford Shale or Taylor Marl. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY008TX Northern Eroded Blackland ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 25 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Ferris, severely eroded (30%)
The Ferris, severely eroded component makes up 30 percent of the map unit. Slopes are 5 to 8 percent. This component is on ridges, dissected plains. The parent material consists of clayey residuum weathered from calcareous shale of the Taylor Marl group. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R086AY008TX Northern Eroded Blackland ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 16 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Unnamed (5%)

LeB - Lewisville silty clay, 1 to 3 percent slopes

Component: Lewisville (85%)
The Lewisville component makes up 85 percent of the map unit. Slopes are 1 to 3 percent. This component is on stream terraces on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY007TX Southern Clay Loam ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 30 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Altoga (10%)

Component: Branyon (5%)

LeC2 - Lewisville silty clay, 3 to 5 percent slopes, eroded

Component: Lewisville, eroded (85%)
The Lewisville, eroded component makes up 85 percent of the map unit. Slopes are 3 to 5 percent. This component is on stream terraces on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY007TX Southern Clay Loam ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 30 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Altoga, eroded (15%)

LeD2 - Lewisville silty clay, 5 to 8 percent slopes, eroded

Component: Lewisville, eroded (95%)
The Lewisville, eroded component makes up 95 percent of the map unit. Slopes are 5 to 8 percent. This component is on stream terraces on river valleys. The parent material consists of alluvium of Quaternary age derived from mixed sources. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY006TX Northern Clay Loam ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 30 percent.

Component: Unnamed (5%)

LsD3 - Altoga soils, 5 to 8 percent slopes, severely eroded

Component: Altoga, severely eroded (95%)
The Altoga, severely eroded component makes up 95 percent of the map unit. Slopes are 5 to 8 percent. This component is on stream terraces on dissected plains. The parent material consists of clayey alluvium derived from mixed sources. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R086AY010TX Northern Blackland ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 58 percent.

Component: Unnamed (5%)

LWB - Lewisville association, 1 to 3 percent slopes

Component: Lewisville (38%)
The Lewisville component makes up 38 percent of the map unit. Slopes are 1 to 3 percent. This component is on stream terraces on dissected plains. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY007TX Southern Clay Loam ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 30 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Lewisville (37%)

The Lewisville component makes up 37 percent of the map unit. Slopes are 1 to 3 percent. This component is on stream terraces on dissected plains. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY007TX Southern Clay Loam ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 30 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Altoga (15%)

Component: Branyon (10%)

LWC2 - Lewisville association, 3 to 5 percent slopes, moderately eroded

Component: Lewisville, moderately eroded (43%)

The Lewisville, moderately eroded component makes up 43 percent of the map unit. Slopes are 3 to 5 percent. This component is on stream terraces on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY007TX Southern Clay Loam ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 30 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Lewisville (42%)

The Lewisville component makes up 42 percent of the map unit. Slopes are 3 to 5 percent. This component is on stream terraces on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R086AY007TX Southern Clay Loam ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 30 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Altoga, moderately eroded (10%)

Component: Branyon (5%)

PcA - Normangee clay loam, 0 to 2 percent slopes

Component: Normangee (85%)

The Normangee component makes up 85 percent of the map unit. Slopes are 0 to 2 percent. This component is on ridges on dissected plains. The parent material consists of calcareous clayey residuum weathered from shale. Depth to a root restrictive layer, bedrock, densic, is 40 to 66 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R086AY004TX Southern Claypan Prairie ecological site. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria. The calcium

carbonate equivalent within 40 inches, typically, does not exceed 3 percent. The soil has a slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 6 within 30 inches of the soil surface.

Component: Crockett (10%)

Component: Wilson (5%)

PnB - Normangee and Silawa soils, 1 to 3 percent slopes

Component: Normangee (80%)
The Normangee component makes up 80 percent of the map unit. Slopes are 1 to 3 percent. This component is on ridges on inland dissected coastal plains. The parent material consists of residuum weathered from shale in the Cook Mountain and Wilcox formations of Eocene age. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R086AY003TX Northern Claypan Prairie ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 3 percent. The soil has a slightly saline horizon within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 6 within 30 inches of the soil surface.

Component: Silawa (15%)
The Silawa component makes up 15 percent of the map unit. Slopes are 1 to 3 percent. This component is on stream terraces on river valleys. The parent material consists of sandy alluvium of Quaternary age derived from mixed sources. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R087AY005TX Sandy Loam ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Unnamed (5%)

Sc - Slickspots

Component: Slickspots (100%)
The Slickspots is a minor miscellaneous area.

Tc - Trinity clay, 0 to 1 percent slopes, frequently flooded

Component: Trinity (85%)
The Trinity component makes up 85 percent of the map unit. Slopes are 0 to 1 percent. This component is on broad flood plains on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is frequently flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY013TX Clayey Bottomland ecological site. Nonirrigated land capability classification is 5w. This soil meets hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 9 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Kaufman (10%)

Component: Whitesboro (4%)

Component: Gladewater (1%)

To - Trinity clay, 0 to 1 percent slopes, occasionally flooded

Component: Trinity (85%)
The Trinity component makes up 85 percent of the map unit. Slopes are 0 to 1 percent. This component is on broad flood plains on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is occasionally flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, November, December. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY013TX Clayey Bottomland ecological site. Nonirrigated land capability classification is 4w. Irrigated land capability classification is 4w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 11 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface.

Component: Frio (5%)

Component: Seagoville (4%)

Component: Ovan (3%)

Component: Bunyan, variant, calcareous variant (2%)

Component: Gladewater (1%)

Tr - Trinity clay, 0 to 1 percent slopes, wet, occasionally flooded, frequently ponded

Component: Trinity, wet (90%)
The Trinity, wet component makes up 90 percent of the map unit. Slopes are 0 to 1 percent. This component is on circular gilgai on broad flood plains on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is occasionally flooded. It is frequently ponded. A seasonal zone of water saturation is at 0 inches during February, March, April, May. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY013TX Clayey Bottomland ecological site. Nonirrigated land capability classification is 5w. Irrigated land capability classification is 5w. This soil meets hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 11 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface.

Component: Seagoville (7%)

Component: Gladewater (3%)

NAVARRO COUNTY

FeD2 - Ferris clay, 3 to 8 percent slopes, eroded

Component: Ferris, eroded (100%)
The Ferris, eroded component makes up 100 percent of the map unit. Slopes are 3 to 8 percent. This component is on linear gilgai on ridges on dissected plains. The parent material consists of residuum weathered from calcareous shale in Eagleford Shale and Taylor Marl formations of Cretaceous age. Depth to a root restrictive layer, bedrock, densic, is 40 to 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60

inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R086AY008TX Northern Eroded Blackland ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 16 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

FhE2 - Ferris and Heiden clays, 5 to 15 percent slopes, eroded

Component: Ferris, eroded (67%)

The Ferris, eroded component makes up 67 percent of the map unit. Slopes are 5 to 15 percent. This component is on linear gilgai on ridges on dissected plains. The parent material consists of residuum weathered from calcareous shale in Eagleford Shale and Taylor Marl formations of Cretaceous age. Depth to a root restrictive layer, bedrock, densic, is 40 to 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R086AY008TX Northern Eroded Blackland ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 16 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Heiden, eroded (28%)

The Heiden, eroded component makes up 28 percent of the map unit. Slopes are 5 to 15 percent. This component is on linear gilgai on ridges on dissected plains. The parent material consists of clayey residuum weathered from clayey shale of Eagleford Shale or Taylor Marl. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY008TX Northern Eroded Blackland ecological site. Nonirrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 25 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Unnamed (5%)

HaB - Heiden clay, 1 to 3 percent slopes

Component: Heiden (85%)

The Heiden component makes up 85 percent of the map unit. Slopes are 1 to 3 percent. This component is on ridges on dissected plains. The parent material consists of clayey residuum weathered from mudstone. Depth to a root restrictive layer, densic material, is 40 to 65 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 14 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 7 within 30 inches of the soil surface.

Component: Houston Black (10%)

Component: Ferris (5%)

HaC - Heiden clay, 3 to 5 percent slopes

Component: Heiden (85%)

The Heiden component makes up 85 percent of the map unit. Slopes are 3 to 5 percent. This component is on ridges on dissected plains. The parent material consists of clayey residuum weathered from mudstone. Depth to a root restrictive layer, densic material, is 40 to 65 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 14 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 7 within 30 inches of the soil surface.

Component: Houston Black (10%)

Component: Ferris, moderately eroded (5%)

HaC2 - Heiden clay, 3 to 5 percent slopes, eroded

Component: Heiden, moderately eroded (85%)

The Heiden, moderately eroded component makes up 85 percent of the map unit. Slopes are 3 to 5 percent. This component is on ridges on dissected plains. The parent material consists of clayey residuum weathered from mudstone. Depth to a root restrictive layer, densic material, is 40 to 65 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY009TX Southern Eroded Blackland ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 14 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 7 within 30 inches of the soil surface.

Component: Houston Black (10%)

Component: Ferris, severely eroded (5%)

HaD2 - Heiden clay, 5 to 8 percent slopes, eroded

Component: Heiden, moderately eroded (85%)

The Heiden, moderately eroded component makes up 85 percent of the map unit. Slopes are 5 to 8 percent. This component is on ridges on dissected plains. The parent material consists of clayey residuum weathered from mudstone. Depth to a root restrictive layer, densic material, is 40 to 65 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY009TX Southern Eroded Blackland ecological site. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 14 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 7 within 30 inches of the soil surface.

Component: Ferris, moderately eroded (10%)

Component: Heiden, severely eroded (5%)

HbB - Houston Black clay, 1 to 3 percent slopes

Component: Houston Black (80%)

The Houston Black component makes up 80 percent of the map unit. Slopes are 1 to 3 percent. This component is on linear gilgai on ridges on dissected plains. The parent material consists of clayey residuum weathered from calcareous mudstone of

Upper Cretaceous Age. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY011TX Southern Blackland ecological site. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 25 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Heiden (15%)

Component: Fairlie (5%)

Tn - Trinity clay, 0 to 1 percent slopes, occasionally flooded

Component: Trinity (85%)
The Trinity component makes up 85 percent of the map unit. Slopes are 0 to 1 percent. This component is on broad flood plains on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is occasionally flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, November, December. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY013TX Clayey Bottomland ecological site. Nonirrigated land capability classification is 4w. Irrigated land capability classification is 4w. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 11 percent. The soil has a very slightly saline horizon within 30 inches of the soil surface.

Component: Frio (5%)

Component: Seagoville (4%)

Component: Ovan (3%)

Component: Bunyan, variant, calcareous variant (2%)

Component: Gladewater (1%)

Tr - Trinity clay, 0 to 1 percent slopes, frequently flooded

Component: Trinity (85%)
The Trinity component makes up 85 percent of the map unit. Slopes are 0 to 1 percent. This component is on broad flood plains on river valleys. The parent material consists of calcareous clayey alluvium derived from mudstone. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is low. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is very high. This soil is frequently flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This component is in the R086AY013TX Clayey Bottomland ecological site. Nonirrigated land capability classification is 5w. This soil meets hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 9 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 1 within 30 inches of the soil surface.

Component: Kaufman (10%)

Component: Whitesboro (4%)

Component: Gladewater (1%)

Soil properties of the soil map units are summarized in Table 2 (Ellis County) and Table 3 (Navarro County).

SPECIAL COMMENTS AND SUGGESTIONS:

Lab Number(s): 10000, 10001, 10002, 10003, 10004, 10005, 10006, 10007

CORN: Consider applying part of the recommended nitrogen (N) and phosphate (P2O5) fertilizer in a band at planting, especially with early-planted corn. Avoid placing fertilizer in direct contact with seed to prevent potential injury to young seedlings.

Analyses are representative of the samples submitted | Samples are retained 30 days after report of analysis | Explanations of soil analysis terms are available upon request

LAB NO:	10000 - 10008
INVOICE NO:	173354
DATE RECEIVED:	10/21/2024
DATE REPORTED:	10/28/2024

SOIL ANALYSIS RESULTS FOR: VANGUARD ORGANICS - CLC **FIELD ID:** COREY MULLIN

Lab Number(s): 10000, 10001, 10002, 10003, 10004, 10005, 10006, 10007, 10008

GRAZING WHEAT: The above nitrogen (N) recommendations are for grain production only. An extra 20 to 50 lb. of topdress N per acre may be needed to replace the N removed during grazing (Note: Apply 30 to 35 lb. of N for every 100 lb. of weight gained by cattle. A stocker calf removes about 15 lb. of N during a 30 day grazing period.)

Lab Number(s): 10000, 10001, 10002, 10003, 10004, 10005, 10006, 10007, 10008

CORN: Nitrogen fertilizer recommendations have been adjusted for soil organic matter content.

Lab Number(s): 10000, 10001, 10002, 10003, 10004, 10005, 10006, 10007, 10008

The CEC value calculated by cation summation has been adjusted to compensate for the presence of excess lime (reactive carbonates).

Lab Number(s): 10000, 10001, 10002, 10003, 10004, 10005, 10006, 10007, 10008

ZINC: The "c-DTPA-Zinc" equivalent was calculated from the Mehlich-3 ICP zinc value. Zinc fertilizer recommendations were calculated using the Mehlich-3 ICP zinc value.

Lab Number(s): 10000, 10004

SULFUR: Suggest applying a portion of the recommended sulfur fertilizer at topdress time. Sulfur fertilizer has not consistently improved wheat yields or protein content, but can help wheat "green up" in spring. Topdressing sulfur is most beneficial on sandy soils, soils with low organic matter, and wheat with above-average yield potential.

Lab Number(s): 10002

MANGANESE: Soil manganese availability can be affected by soil pH and/or soil moisture conditions. Yield response to manganese fertilization is infrequent, so plant analysis is suggested to confirm a deficiency. If fertilizer is required, suggest band application because broadcast applications are generally not effective.

SOIL ANALYSIS RESULTS FOR: VANGUARD ORGANICS - CLC **FIELD ID:** COREY MULLIN

Lab Number(s): 9946, 9947, 9948, 9949, 9950, 9951, 9952, 9953

GRAZING WHEAT: The above nitrogen (N) recommendations are for grain production only. An extra 20 to 50 lb. of topdress N per acre may be needed to replace the N removed during grazing (Note: Apply 30 to 35 lb. of N for every 100 lb. of weight gained by cattle. A stocker calf removes about 15 lb. of N during a 30 day grazing period.)

Lab Number(s): 9946, 9947, 9948, 9949, 9950, 9951, 9952, 9953

CORN: Nitrogen fertilizer recommendations have been adjusted for soil organic matter content.

Lab Number(s): 9946, 9947, 9948, 9949, 9950, 9951, 9952, 9953

ZINC: The "c-DTPA-Zinc" equivalent was calculated from the Mehlich-3 ICP zinc value. Zinc fertilizer recommendations were calculated using the Mehlich-3 ICP zinc value.

Lab Number(s): 9950

MANGANESE: Soil manganese availability can be affected by soil pH and/or soil moisture conditions. Yield response to manganese fertilization is infrequent, so plant analysis is suggested to confirm a deficiency. If fertilizer is required, suggest band application because broadcast applications are generally not effective.

Lab Number(s): 9953

SULFUR: Suggest applying a portion of the recommended sulfur fertilizer at topdress time. Sulfur fertilizer has not consistently improved wheat yields or protein content, but can help wheat "green up" in spring. Topdressing sulfur is most beneficial on sandy soils, soils with low organic matter, and wheat with above-average yield potential.

GRAZING WHEAT: The above nitrogen (N) recommendations are for grain production only. An extra 20 to 50 lb. of topdress N per acre may be needed to replace the N removed during grazing (Note: Apply 30 to 35 lb. of N for every 100 lb. of weight gained by cattle. A stocker calf removes about 15 lb. of N during a 30 day grazing period.)

Lab Number(s): 9936, 9937, 9938, 9939, 9940, 9941, 9942, 9943, 9944, 9945

CORN: Consider applying part of the recommended nitrogen (N) and phosphate (P_2O_5) fertilizer in a band at planting, especially with early-planted corn. Avoid placing fertilizer in direct contact with seed to prevent potential injury to young seedlings.

Lab Number(s): 9936, 9937, 9938, 9939, 9940, 9941, 9942, 9943, 9944, 9945

CORN: Nitrogen fertilizer recommendations have been adjusted for soil organic matter content.

Lab Number(s): 9936, 9937, 9938, 9939, 9940, 9941, 9942, 9943, 9944, 9945

ZINC: The "c-DTPA-Zinc" equivalent was calculated from the Mehlich-3 ICP zinc value. Zinc fertilizer recommendations were calculated using the Mehlich-3 ICP zinc value.

Lab Number(s): 9936, 9937, 9938, 9939, 9943, 9944, 9945

The CEC value calculated by cation summation has been adjusted to compensate for the presence of excess lime (reactive carbonates).

Lab Number(s): 9938

MANGANESE: Soil manganese availability can be affected by soil pH and/or soil moisture conditions. Yield response to manganese fertilization is infrequent, so plant analysis is suggested to confirm a deficiency. If fertilizer is required, suggest band application because broadcast applications are generally not effective.

Lab Number(s): 9939, 9940, 9941, 9942, 9943

SULFUR: Suggest applying a portion of the recommended sulfur fertilizer at topdress time. Sulfur fertilizer has not consistently improved wheat yields or protein content, but can help wheat "green up" in spring. Topdressing sulfur is most beneficial on sandy soils, soils with low organic matter, and wheat with above-average yield potential.

Lab Number(s): 9944

SODIUM - CAUTION (4% to 7% Na): The exchangeable soil sodium (as % Na) is moderately high for fine-textured soils and may indicate a developing problem. If irrigated, an irrigation water analysis can help identify the sodium source. Contact the laboratory for details.

ATTACHMENT S

SUPPLEMENTAL TECHNICAL REPORT
FOR IRRIGATION DISPOSAL

Ellis AD 1, LLC

Prepared by:

James Miertschin & Associates, Inc.
Austin, Texas

February 2025

7 Feb 2025

TABLE OF CONTENTS

1.0 INTRODUCTION

1.1 LOCATION

The Ellis AD 1, LLC (EAD) will provide treatment of organic waste material, supplemented by manure, and will produce renewable natural gas in an anerobic digester. Liquid waste from the digesters will be irrigated as an agricultural beneficial by-product. The proposed facility will be located in Ellis and Navarro Counties.

1.2 PROPOSED IRRIGATION DISPOSAL

The EAD proposes to utilize irrigation for disposal of treated industrial effluent at a final phase flow of 56,224 gpd. Multiple irrigation tracts have been designated with a total of 4,553.8 acres. The cover crop for the irrigation tract is agricultural related: corn and coastal Bermuda, with the majority of acreage devoted to corn. In conjunction with the EAD's permit application, a water balance and storage analysis was conducted for sizing of the irrigation disposal system. In addition, a nitrogen balance was developed.

2.0 IRRIGATION SYSTEM SIZING

TCEQ rules for irrigation systems generally require that effluent disposal be accomplished by evaporation and evapotranspiration. A water balance analysis for the study area is conducted to determine key irrigation system design parameters. In the water balance, rainfall, runoff, infiltration, and evapotranspiration are analyzed in order to determine the amount of water that can be applied to a site for consumption by a particular cover crop. The results are then used to calculate an effluent application rate and land area requirements for irrigation of wastewater.

A storage balance, similar in structure to the preceding water balance, is also required to determine the storage volume required for a system that will provide complete disposal of effluent via irrigation. The storage balance typically includes analysis of the effluent application rate and meteorological inputs under wet weather conditions.

The water balance and storage balance for the present facility have been prepared to perform calculations on a monthly time step, in conformance with guidance in Chapter 309 of the TCEQ's rules.

2.1 WATER BALANCE

A detailed water balance for the facility was conducted that was based upon monthly calculation of key variables. The water balance is shown in Appendix A. Information required and used in

the water balance is described below.

Precipitation

A water balance is developed using average rainfall data for a 25 year period of record. The use of average data tends to smooth out highly variable extremes in annual rainfall totals. A 25-year period of record covering 1999-2023 was obtained from the files of the Texas Water Development Board for Quadrangle 511. The historical average annual precipitation was calculated to be 39.27 inches.

Runoff

The SCS curve number methodology was used to calculate runoff at the irrigation site. Hydrologic soil classification was predominantly type D. An adjusted curve number of 74.3 was determined. The adjustment was based on NRCS recommendations for rainfall over a 30 day period. The SCS methodology was applied to monthly precipitation events in order to calculate runoff for each month. The total daily runoff from the typical year was then used in the water balance. The calculated total runoff was 13.65 inches for the average year.

Evapotranspiration

The cover crop for the irrigation site is associated with agricultural uses: corn and coastal bermudagrass.

TCEQ recommends the following reference for consumptive use: McDaniels, *Consumptive Use of Water by Major Crops in Texas*, Texas Board of Water Engineers, Bulletin No. 6019, 1960 This reference for consumptive use of water by crops has been employed by TCEQ for an extensive period of time to determine crop water needs for wastewater application. This reference provides a map that establishes eight land resource divisions for the state, along with geographic subdivisions for irrigated areas. Using this mapping, the proposed facility in Ellis and Navarro Counties is located in zone 7B.

Table 6 of the reference provides tabulated water needs for corn and Table 5 provides tabulated water needs for alfalfa that can be converted to bermuda. For this analysis, these two crops comprise the largest proportion of the projected land application areas. The calculations to determine consumptive use of water are shown in the table below.

BULLETIN 6019 METHOD

1. Determine "Irrigation Area/Land Resource Division"

Zones shown in Figure 1 & 2 TWDB Bulletin 6019

2. Name Crop/Vegetation Type

Use crop ET data from TWDB Bulletin 6019, Avg. Monthly Consumptive Use (in.)

Primary crops are corn and some coastal bermuda

For total tract, corn represents 0.842 and coastal represents 0.1499 of the acreage

Calculations: (inches)

December	0	0.80	0.72	0.11
Totals	**23.6**	**51.40**	**46.26**	**26.81**

The projected monthly consumptive use of corn was tabulated alongside the consumptive use of bermuda. With this approach, the calculated consumptive use for the site was determined to be 26.81 inches per year (2.23 feet per year). This would be the allowable consumptive use that is entered into the water balance.

Leaching

A leaching requirement to prevent build-up of salts in the soil was calculated using the methodology recommended by the TCEQ. The leaching quantity is calculated based upon the conductivity of the wastewater and the allowable soil moisture conductivity, along with the evapotranspiration use and infiltrated rainfall, in accordance with the method in TAC Chapter 309. Effluent conductivity was estimated at 15 mmhos/cm and the allowable soil moisture conductivity was estimated at 4 mmhos/cm. Table 3 in Chapter 309 shows a suggested maximum soil conductivity of 4 mmhos/cm for corn, the predominant crop.

Evaporation

Loss of water from the storage pond via evaporation was estimated using data from the Texas Water Development Board, Quadrant 511, for the period of record 1999-2023. The historical monthly average gross evaporation data were corrected for the historical monthly precipitation to obtain net evaporation. The monthly net evaporation value was then disaggregated into daily values for each month and used in the water balance.

Effluent Application Rate

From the water balance calculation for the site, it was determined that a total of 23.37 inches/year (1.95 feet/year) of wastewater could be consumed from the storage pond. This value for consumption from the pond is comprised of water used for irrigation and water that evaporates. This consumptive use also represents the calculated average allowable wastewater application rate for the site, based upon the hydraulic loading described in the water balance.

Minimum Irrigation Area

The effluent application rate from the water balance analysis is used to determine the minimum irrigation area needed for a specific design flow. The proposed effluent flow from the facility is projected to be 56,224 gpd, which is equivalent to an annual volume of wastewater of 63 acre-feet (20.53 MG/yr). Using the annual wastewater flow, an irrigation area of only 32.3 acres would be required using the calculated effluent application rate derived from the water balance. This conclusion would assume that the effluent is scheduled to provide all of the water needs for the crop.

However, additional area available on the tract will also be used for irrigation, in excess of the minimum required. This additional area will be displayed within the storage balance for the site.

2.2 STORAGE BALANCE

A storage balance was conducted for sizing of the storage capacity necessary for successful irrigation scheduling in response to variable dry and wet conditions. The storage balance is essentially a water balance that analyzes the effluent application rate, evapotranspiration, rainfall, runoff, infiltration, and evaporation in order to determine the storage volume required. Instead of the average rainfall applied in the water balance, the storage calculations were based on the wettest year on record during the past 25 years (1999 - 2023).

Precipitation

The wettest year in the 25-year period of record from the Quadrangle 511 data was determined to be 2015, with a total precipitation of 67.56 inches.

Runoff

As in the water balance calculations, the SCS methodology was applied to monthly rainfall from the wet year records in order to calculate runoff. The total runoff in the wet year was estimated to be 40.24 inches. The total daily runoff from the wet year was then used in the storage balance.

Evaporation

The year of lowest gross evaporation (2007) was determined from the period of record covering 1999-2023. The maximum monthly precipitation values were subtracted from the gross evaporation data in order to estimate wet year net evaporation conditions.

Other data employed in the storage balance analysis was carried over from the water balance analysis, namely the calculated total water needs, comprised of evapotranspiration and leaching.

Discussion

A key component of the storage balance analysis for the site is the volume of effluent delivered to the irrigation system on a unit area basis. Therefore, the size of the irrigation field affects the results of the storage balance. Generally, increasing the size of the irrigation area results in a reduction in the calculated storage requirement.

EAD could use an application rate of nearly 2 feet/yr at the irrigation site, based on the results of the water balance. However, EAD plans to apply wastewater to 4553 acres, rather than the minimum acreage shown by the water balance. The storage balance indicated a maximum storage requirement of 0.038 inches/acre. With this storage requirement, a minimum required storage pond volume of 14.27 acre-feet (4.65 MG) can be calculated. This volume of storage would provide 84.5 days of detention at the specified effluent flow. In the Summary section below, it will be explained that the proposed facility will provide substantially more storage volume than the minimum volume calculated with the storage balance.

As previously stated, the storage analysis is dependent upon the irrigation area. As displayed by the storage balance analysis, with the available irrigation area, the effluent application rate is restricted to 0.17 inches per year or less. This finding will be subsequently discussed in the summary section.

2.3 NITROGEN BALANCE

A nitrogen balance was prepared for the irrigation site to examine system sizing with respect to conventional estimates of cover crop nutrient uptake, as shown in Appendix C. Key input parameters are described below.

Hydraulic Application Rate

The first column of data displays the effluent needed in the root zone obtained from the water balance analysis for the site. This root zone requirement for effluent represents the hydraulic application rate, or volume of wastewater, that can be applied for consumption by the crop. The effluent requirement varies monthly in accordance with the climatological and evapotranspiration characteristics at the site. The monthly distribution of crop effluent need is used throughout the nitrogen balance to represent the monthly variation of crop growth and nutritional need. This distribution is displayed in the second column of data in the table.

Nitrogen Loading

The nitrogen balance table calculates the applied nitrogen loading in pounds per acre to the irrigation area on a monthly basis. The third column of data in the table displays the effluent applied on a monthly basis, in terms of total volume in acre-feet, distributed in accordance with the crop effluent needs. The nitrogen loading associated with the applied effluent is calculated in the fourth column of data. The nitrogen loading is determined from the effluent volume and the concentration of total nitrogen and converted to a unit area basis. The sum of the monthly nitrogen loading represents the total amount of nitrogen applied via effluent irrigation for the year.

Crop Uptake

One of the key parameters in the nitrogen balance is the projected crop uptake of nitrogen. Data obtained from NRCS was used to project crop uptake of nitrogen. The nitrogen uptake of corn and bermuda may be estimated at approximately 155 lbs N/acre. (This is based on the proposed acreage of corn at 144 lbs N/acre, plus the proposed acreage of coastal Bermuda at 300 lb N/acre, plus the proposed acreage of grazing Bermuda at 160 lb N/acre, and the calculated composite average value.)

For use in the nitrogen balance, the uptake rate can be increased by 20% to account for volatilization loss of nitrogen. The total annual nitrogen uptake values enter into the nitrogen balance table in the fifth column of data (after including an allowance for volatilization), with the values distributed on a monthly basis in accordance with crop water needs. The sixth column of data presents the calculated hydraulic application rate (inches/month) of effluent that would be needed to satisfy the crop nitrogen needs, with effluent as the only source of nitrogen.

Discussion

The nitrogen balance depicts the needs of the agricultural crops and compares the nutrient load to the wastewater effluent characteristics. In this case, the projected effluent flow is 56,224 gallons per day, and the nitrogen concentration is 3151 mg/L as TKN. With this magnitude of nitrogen loading, the allowable effluent application rate is determined to be to 0.26 inches/acre. Under these conditions, it is evident that nitrogen will be applied to the site at a rate lower than the calculated crop uptake rate for nitrogen. This is also apparent in the calculation of the effluent needed in the root zone, which can be compared directly to the hydraulic application rate for the

irrigation system. The effluent volume application rate calculated on the basis of crop nitrogen uptake is greater than the effluent volume application rate calculated on the basis of consumptive use in the water balance.

TCEQ's Chapter 309 only requires determination of the nitrogen loading on an annual basis, which is simpler than the nutrient budget described above. With an estimated annual crop nitrogen requirement of 155.7 lb N/ac-yr and an adjustment for 20% volatilization, the calculated allowable liquid loading is 0.262 inches/acre-year. This would satisfy the allowable crop nitrogen uptake value on an annual basis.

3.0 SUMMARY OF PROPOSED IRRIGATION SYSTEM

Parameters for the proposed effluent irrigation system are summarized below.

Irrigation Area

The permittee proposes a total **irrigation area of 4553 acres** for disposal of up to **63 acre-feet/yr** (20.53 MG/yr) of effluent.

Storage Pond

According to the storage balance calculation, the permittee needs to provide a storage volume of 14.6 acre-feet (4.8 MG). As a substantial safety factor, the permittee proposes a storage volume **of 12 million gallons for the effluent flow of 56,224 gpd**. This volume will be provided with an earthen berm constructed storage pond. The proposed storage volume significantly exceeds the required minimum storage volume derived from the storage balance analysis.

The storage component is not a wastewater treatment unit *per se* -- it only serves to store highly treated effluent.

Application Rate

It is noted that the monthly water balance discussed in this report indicated that an allowable wastewater application rate would be nearly 2 ft/year. With the large amount of irrigation available, and considering the applied nitrogen loading associated with the wastewater, the nitrogen balance provides the most restrictive parameter, and indicated that an allowable application rate would be 0.26 inches/acre. Therefore, the requested hydraulic application rate in the permit for this facility is an overall rate of 0.26 inches/acre. It is requested that a safety factor be applied to this number, since the cropping needs may vary from field to field, season to season and year to year. A safety factor of 0.25 is requested, which would result in the permitted application rate to be 0.325 inches/acre. Since the permitted application rate is usually expressed as application on a yearly basis, the rate would be 0.325 inches/year (0.027 ft/yr).

Note that this particular situation in unique compared to most irrigation applications. It is often the case that the water balance dictates an allowable application rate in terms of depth of effluent applied per acre per year. Here, the excess of available land and the relatively modest effluent flow result in a greatly reduced application rate. And in fact, the application rate is ultimately controlled by the nitrogen balance.

Application System

The effluent will be used for **irrigation of corn and bermuda,** as described above. Effluent from storage will be pumped to tanker spreaders for tractor-driven delivery to each land management unit.

System Operation

The application of wastewater effluent will be carefully controlled by the operators. There are no physical tailwater controls proposed for the irrigation site. Runoff of effluent during irrigation will be prevented by careful control of the application rate. Irrigation will not occur during wet weather storm events as a further operational precaution to prevent runoff of effluent.

Recommended Language for Permit

It is recommended that the TLAP permit should contain the following language:

Irrigated area = 4553.8 acres
Effluent flow = report
Application rate = 0.325 in/yr (0.027 ft/yr)
= 0.027 acre-feet/acre/year
= 8,962 gal/acre/year (most convenient measure for operator tracking)

Special Provision: Permittee may also occasionally apply solids to the irrigation fields as appropriate to maintain or increase agricultural productivity and within limits and rates described within the irrigation management plan, as long as the annual nitrogen loading limit of 186 lb N/acre/year is maintained.

Special Provision: Permittee shall prepare Irrigation Management Plan that illustrates monitoring and management of nutrient constituents within the effluent and soils. This plan shall address the loading rates of constituents and long-term management goals to address potential buildup of constituents. This Irrigation Management Plan will contain elements of a Nutrient Management Plan that utilizes NRCS guidance. The plan shall be prepared by permittee within 3 months of permit issuance and kept on site.

Attachments: mailing labels.docx

Hi Leah, thanks for reviewing with me on the call.

Attached is a new mailing label document that should have the info for both counties. I am confident that you will check it.

There is one other issue to address: the designation of the Library in Italy TX, representing Ellis County, needs to change. I spoke to the librarian last week Friday and she is NOT HAPPY with this and I fear she will simply not cooperate. Instead, for Ellis County, I propose that we designate the public place to be Nicholas Sims Library, 515 W. Main St, Waxahatchie TX 75165. They are familiar with this process and will cooperate.

If you can edit the NORI to reflect this change, please do so.

Subject: RE: Admin Review Response - Ellis AD 1, LLC (WQ0005485000)

Hi James,

I've reviewed the response and everything was addressed. While preparing to issue the NORI, I realized a discrepancy in the landowner map and list. The map numbers 190 landowners, while the list is for 151 landowners. Please clarify or provide the landowner list and mailing labels to include landowners 152-190.

Everything else looks good to go and I can issue the NORIs once all the landowners have been included. Please let me know if you have any questions.

Thanks,

Leah Whallon

Site Name: Ellis AD 1 (RN112138888)
Response to Comments from Administrative Review

Dear Ms. Whallon:

We received your letter dated 20 February 2025 regarding the permit application referenced above. Responses to your comments are provided below, on behalf of Ellis AD 1, LLC.

1. Core Data Form, Section III, Items 24-32; regarding counties, zip codes, SIC codes, NAICS codes, latitude/longitude.

   Response: A revised page 2 of the Core Data Form is attached, providing the requested information.

2. Administrative Report 1.0, Item 3; regarding co-applicants.

   Response: Signature pages and Core Data Forms for the two co-applicants are attached.

3. Administrative Report 1.0, Items 11.i-j; regarding physical locations

   Response: A revised page for Items 11.i-j is attached.

4. Administrative Report 1.1; regarding landowner list.

   Response: Attached with this response is the reformatted landowner list in Word.

5. Notice of Receipt of Application and Intent to Obtain a Water Quality Permit

   Response: The Notice appears to be generally correct but additional details have been added. An updated notice is attached as a Word document,

6. Public notice in Spanish.

   Response: The translation of the notice in Spanish is attached as a Word document.

I am providing this complete response to you via email. Please do not hesitate to call me at (512) 327-2708 if you have any questions.

Yours truly,

JAMES MIERTSCHIN & ASSOCIATES, INC.

☐ Yes ☒ No or New Permit

If no, or a new application, provide an accurate location description: Click to enter text.

e. Are the discharge route(s) in the existing permit correct?

☐ Yes ☒ No or New Permit

If no, or a new permit, provide an accurate description of the discharge route: Click to enter text.

f. City nearest the outfall(s): Click to enter text.

g. County in which the outfalls(s) is/are located: NA

h. Is or will the treated wastewater discharge to a city, county, or state highway right-of-way, or a flood control district drainage ditch?

☐ Yes ☒ No

If yes, indicate by a check mark if: ☐ Authorization granted ☐ Authorization pending

For new and amendment applications, attach copies of letters that show proof of contact and provide the approval letter upon receipt. Attachment: Click to enter text.

For all applications involving an average daily discharge of 5 MGD or more, provide the names of all counties located within 100 statute miles downstream of the point(s) of discharge: Click to enter text.

i. For TLAPs, is the location of the effluent disposal site in the existing permit accurate?

☐ Yes No or New Permit ☒ New Permit

If no, or a new application, provide an accurate location description: multiple tracts within an 11-mile distance from treatment facility in a NW, W, and SW direction

j. City nearest the disposal site: Ennis, Italy

k. County in which the disposal site is located: Ellis, Navarro

l. For TLAPs, describe how effluent is/will be routed from the treatment facility to the disposal site: Liquid spreader tankers will route from the pond to the fields

m. For TLAPs, identify the nearest watercourse to the disposal site to which rainfall runoff might flow if not contained: Chambers Creek Segment 0814Click to enter text.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

NOTICE OF RECEIPT OF APPLICATION AND INTENT TO OBTAIN WATER QUALITY PERMIT

PROPOSED PERMIT NO. WQ0005485000

APPLICATION. Ellis AD 1, LLC, Creek Land and Cattle LLC, and Alliance Land & Cattle, LLC, 133 Boston Post Road, Weston, Massachusetts 02493, which will operate an anaerobic digestion facility, has applied to the Texas Commission on Environmental Quality (TCEQ) for proposed Texas Land Application Permit (TLAP) No. WQ0005485000 to authorize the disposal of treated wastewater at a volume not to exceed a daily average flow of 56,224 gallons per day via irrigation of approximately 4,553 acres. The facility and disposal area will be located approximately 1,200 feet west of the intersection of Armstrong Road and Austonia Road, in Ellis and Navarro Counties, Texas 75119. TCEQ received this application on February 10, 2025. The permit application will be available for viewing and copying at S.M. Dunlap Library, 300 West Main Street, Italy, in Ellis County, Texas and at Corsicana Public Library, 100 North 12th Street, Corsicana, in Navarro County, Texas prior to the date this notice is published in the newspaper. The application, including any updates, and associated notices are available electronically at the following webpage: https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For the exact location, refer to the application. (map link pending response)

ALTERNATIVE LANGUAGE NOTICE. Alternative language notice in Spanish is available at: https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications. El aviso de idioma alternativo en español está disponible en https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications.

ADDITIONAL NOTICE. TCEQ's Executive Director has determined the application is administratively complete and will conduct a technical review of the application. After technical review of the application is complete, the Executive Director may prepare a draft permit and will issue a preliminary decision on the application. **Notice of the Application and Preliminary Decision will be published and mailed to those who are on the county-wide mailing list and to those who are on the mailing list for this application. That notice will contain the deadline for submitting public comments.**

PUBLIC COMMENT / PUBLIC MEETING. You may submit public comments or request a public meeting on this application. The purpose of a public meeting is to provide the opportunity to submit comments or to ask questions about the application. TCEQ will hold a public meeting if the Executive Director determines that there is a significant degree of public

interest in the application or if requested by a local legislator. A public meeting is not a contested case hearing.

OPPORTUNITY FOR A CONTESTED CASE HEARING. After the deadline for submitting public comments, the Executive Director will consider all timely comments and prepare a response to all relevant and material, or significant public comments. **Unless the application is directly referred for a contested case hearing, the response to comments, and the Executive Director's decision on the application, will be mailed to everyone who submitted public comments and to those persons who are on the mailing list for this application. If comments are received, the mailing will also provide instructions for requesting reconsideration of the Executive Director's decision and for requesting a contested case hearing.** A contested case hearing is a legal proceeding similar to a civil trial in state district court.

TO REQUEST A CONTESTED CASE HEARING, YOU MUST INCLUDE THE FOLLOWING ITEMS IN YOUR REQUEST: your name, address, phone number; applicant's name and proposed permit number; the location and distance of your property/activities relative to the proposed facility; a specific description of how you would be adversely affected by the facility in a way not common to the general public; a list of all disputed issues of fact that you submit during the comment period and, the statement "[I/we] request a contested case hearing." If the request for contested case hearing is filed on behalf of a group or association, the request must designate the group's representative for receiving future correspondence; identify by name and physical address an individual member of the group who would be adversely affected by the proposed facility or activity; provide the information discussed above regarding the affected member's location and distance from the facility or activity; explain how and why the member would be affected; and explain how the interests the group seeks to protect are relevant to the group's purpose.

Following the close of all applicable comment and request periods, the Executive Director will forward the application and any requests for reconsideration or for a contested case hearing to the TCEQ Commissioners for their consideration at a scheduled Commission meeting.

The Commission may only grant a request for a contested case hearing on issues the requestor submitted in their timely comments that were not subsequently withdrawn. **If a hearing is granted, the subject of a hearing will be limited to disputed issues of fact or mixed questions of fact and law relating to relevant and material water quality concerns submitted during the comment period.**

MAILING LIST. If you submit public comments, a request for a contested case hearing or a reconsideration of the Executive Director's decision, you will be added to the mailing list for this specific application to receive future public notices mailed by the Office of the Chief Clerk. In addition, you may request to be placed on: (1) the permanent mailing list for a specific applicant name and permit number; and/or (2) the mailing list for a specific county. If you wish to be placed on the permanent and/or the county mailing list, clearly specify which list(s) and send your request to TCEQ Office of the Chief Clerk at the address below.

INFORMATION AVAILABLE ONLINE. For details about the status of the application, visit the Commissioners' Integrated Database at www.tceq.texas.gov/goto/cid. Search the database using the permit number for this application, which is provided at the top of this notice.

AGENCY CONTACTS AND INFORMATION. All public comments and requests must be submitted either electronically at **https://www14.tceq.texas.gov/epic/eComment/**, or in writing to the Texas Commission on Environmental Quality, Office of the Chief Clerk, MC-105, P.O. Box 13087, Austin, Texas 78711-3087. Please be aware that any contact information you provide, including your name, phone number, email address and physical address will become part of the agency's public record. For more information about this permit application or the permitting process, please call the TCEQ Public Education Program, Toll Free, at 1-800-687-4040 or visit their website at www.tceq.texas.gov/goto/pep. Si desea información en Español, puede llamar al 1-800-687-4040.

Further information may also be obtained from Ellis AD 1, LLC, Creek Land and Cattle LLC, and Alliance Land & Cattle, LLC at the address stated above or by calling Mr. William Coffrin, Development Manager, Ellis AD 1, LLC, at 781-232-7597, Extension 4.

Issuance Date: [Month Day, Year]

COMISIÓN DE CALIDAD AMBIENTAL DE TEXAS

AVISO DE RECEPCIÓN DE LA SOLICITUD Y LA INTENCIÓN DE OBTENER UN PERMISO DE CALIDAD DEL AGUA

PERMISO PROPUESTO NÚM. WQ0005485000

SOLICITUD. Ellis AD 1, LLC, Creek Land and Cattle LLC, y Alliance Land & Cattle, LLC, 133 Boston Post Road, Weston, Massachusetts 02493, que operarán una planta de digestión anaeróbica, han solicitado a la Comisión de Calidad Ambiental de Texas (TCEQ) un propuesto Permiso de Aplicación en Terrenos de Texas (TLAP) N.º WQ0005485000 para autorizar la eliminación de aguas residuales tratadas en un volumen que no sobrepase un flujo promedio diario de 56,224 galones por día mediante riego de aproximadamente 4,553 acres. La instalación y el área de eliminación estarán ubicadas aproximadamente a 1,200 pies al oeste de la intersección de Armstrong Road y Austonia Road, en los condados de Ellis y Navarro, Texas 75119. La TCEQ recibió esta solicitud el día 10 de febrero de 2025. La solicitud de permiso estará disponible para leerla y copiarla en la Biblioteca S.M. Dunlap, 300 West Main Street, Italy, en el condado de Ellis, Texas, y en la Biblioteca Pública de Corsicana, 100 North 12th Street, Corsicana, en el condado de Navarro, Texas, antes de la fecha de publicación de este aviso en el periódico. La solicitud, incluidas las actualizaciones y los avisos asociados, están disponibles electrónicamente en la siguiente página web: https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications. Este enlace a un mapa electrónico de la ubicación general del sitio o de la instalación es proporcionado como una cortesía y no es parte de la solicitud o del aviso. Para la ubicación exacta, consulte la solicitud. (se espera respuesta para el enlace del mapa)

ALTERNATIVE LANGUAGE NOTICE. Alternative language notice in Spanish is available at: https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications. El aviso de idioma alternativo en español está disponible en https://www.tceq.texas.gov/permitting/wastewater/pending-permits/tlap-applications.

AVISO ADICIONAL. El Director Ejecutivo de la TCEQ ha determinado que la solicitud es administrativamente completa y realizará una revisión técnica de la solicitud. Después de completar la revisión técnica de la solicitud, el Director Ejecutivo puede preparar un borrador del permiso y emitirá una decisión preliminar sobre la solicitud. **El aviso de la Solicitud y Decisión Preliminar será publicado y enviado por correo a las personas que figuran en la lista de difusión en todo el condado y a las personas que figuran en la lista de correo para esta solicitud. Ese aviso contendrá la fecha límite para presentar comentarios públicos.**

COMENTARIO PÚBLICO / REUNIÓN PÚBLICA. Usted puede presentar comentarios públicos o pedir una reunión pública sobre esta solicitud. El propósito de una reunión pública es dar la oportunidad de presentar comentarios o hacer preguntas acerca de la solicitud. La TCEQ realizará una reunión pública si el Director Ejecutivo determina que hay un grado de interés

público suficiente en la solicitud o si un legislador local lo pide. Una reunión pública no es una audiencia administrativa de lo contencioso.

OPORTUNIDAD DE UNA AUDIENCIA ADMINISTRATIVA DE LO CONTENCIOSO. Después del plazo para presentar comentarios públicos, el Director Ejecutivo considerará todos los comentarios apropiados y preparará una respuesta a todos los comentarios públicos esenciales, pertinentes, o significativos. **A menos que la solicitud haya sido referida directamente a una audiencia administrativa de lo contencioso, la respuesta a los comentarios y la decisión del Director Ejecutivo sobre la solicitud serán enviados por correo a todos los que presentaron un comentario público y a las personas que están en la lista de difusión para esta solicitud. Si se reciben comentarios, el aviso enviado por correo también proveerá instrucciones para solicitar una reconsideración de la decisión del Director Ejecutivo y pedir una audiencia administrativa de lo contencioso.** Una audiencia administrativa de lo contencioso es un procedimiento legal similar a un procedimiento legal civil en un tribunal de distrito del estado.

PARA PEDIR UNA AUDIENCIA ADMINISTRATIVA DE LO CONTENCIOSO, USTED DEBE INCLUIR EN SU PEDIDO LOS SIGUIENTES DATOS: su nombre; dirección; teléfono; nombre del solicitante y número del permiso propuesto; la ubicación y la distancia de su propiedad/actividad con respecto a la instalación propuesta; una descripción específica de la forma en que usted sería afectado adversamente por la instalación de una manera no común al público en general; una lista de todas las cuestiones de hecho en disputa que usted presente durante el período de comentarios y la declaración "[Yo/nosotros] solicito/solicitamos una audiencia administrativa de lo contencioso". Si la solicitud de audiencia administrativa de lo contencioso se presenta por parte de un grupo o una asociación, la solicitud debe identificar el representante del grupo para recibir correspondencia en el futuro; debe identificar un miembro individual del grupo que sería afectado adversamente por la instalación o actividad propuesta; debe proveer la información ya indicada anteriormente con respecto a la ubicación del miembro afectado y la distancia de la instalación o actividad; debe explicar cómo y por qué el miembro sería afectado; y debe explicar la forma en que los intereses que el grupo desea proteger son pertinentes al propósito del grupo.

Después del cierre de todos los períodos para los pedidos y comentarios pertinentes, el Director Ejecutivo enviará la solicitud y los pedidos para reconsideración o por una audiencia administrativa de lo contencioso a los Comisionados de la TCEQ para su consideración en una reunión programada de la Comisión.

La Comisión sólo podrá conceder una solicitud de audiencia administrativa de lo contencioso sobre cuestiones que el solicitante presentó en sus comentarios oportunos y que no fueron retiradas posteriormente. **Si se concede una audiencia, el tema de la audiencia se limitará a cuestiones de hecho en disputa o cuestiones mixtas de hecho y de derecho relacionadas con inquietudes relevantes y materiales sobre la calidad del agua presentadas durante el período de comentarios.**

LISTA DE CORREO. Si usted somete comentarios públicos, un pedido para una audiencia administrativa de lo contencioso o una reconsideración de la decisión del Director Ejecutivo, será añadido a la lista de difusión para esta solicitud específica para recibir avisos públicos futuros enviados por la Oficina del Secretario Principal. Además, puede pedir que lo incluyan en: (1) la lista de correo permanente para el nombre de solicitante y número de permiso

específicos; y/o (2) la lista de correo para un condado especifico. Si desea ser añadido a la lista de correo permanente y/o del condado, identifique claramente la(s) lista(s) y envíe su solicitud por correo a la Oficina del Secretario Principal de la TCEQ, a la dirección proporcionada más abajo.

INFORMACIÓN DISPONIBLE EN LÍNEA. Para obtener detalles sobre el estado de la solicitud, visite la Base de Datos Integrada de los Comisionados en www.tceq.texas.gov/goto/cid. Busque en la base de datos utilizando el número de permiso para esta solicitud, que se encuentra en la parte superior de este aviso.

CONTACTOS E INFORMACIÓN DE LA AGENCIA. Todos los comentarios y solicitudes públicas deben enviarse electrónicamente a **https://www14.tceq.texas.gov/epic/eComment/**, o por escrito a la Comisión de Calidad Ambiental de Texas, Oficina del Secretario Principal, MC-105, P.O. Box 13087, Austin, Texas 78711-3087. Tenga en cuenta que cualquier información de contacto que proporcione, incluido su nombre, número de teléfono, dirección de correo electrónico y dirección física, pasará a formar parte del registro público de la agencia. Si necesita más información sobre esta solicitud de permiso o el proceso de emisión del permiso, por favor llame al Programa de Educación Pública de la TCEQ, sin cobro, al 1-800-687-4040 o visite su sitio web en www.tceq.texas.gov/goto/pep. Si desea información en Español, puede llamar al 1-800-687-4040.

También se puede obtener información adicional de Ellis AD 1, LLC, Creek Land and Cattle LLC, y Alliance Land & Cattle, LLC en la dirección indicada más arriba o llamando al Sr. William Coffrin, Gerente de Desarrollo, Ellis AD 1, LLC, at 781-232-7597, Extensión 4.
