Re: Application to Renew Permit Number: WQ0011011001  
Customer Number: CN600507495  
Regulated Entity Number: RN101920403

Dear Chief Officer,

*The following summary is provided for this pending water quality permit application being reviewed by the Texas Commission on Environmental Quality as required by 30 Texas Administrative Code Chapter 39. The information provided in this summary may change during the technical review of the application and are not federal enforceable representations of the permit application.*

The City of Evant (CN60050749) operates the Evant Wastewater Treatment Plant (RN101920403), the plant operates as an activated sludge wastewater treatment process to treat the wastewater before it is discharged. The facility is located at 650 East Live Oak Street, in Coryell County, Texas 76525.

This application is for a renewal to dispose a daily average flow not to exceed 60,000 gallons per day of treated domestic wastewater via outfall 001.

Discharges from the facility are expected to contain seven-day carbonaceous biochemical oxygen demand (CBOD<sub>5</sub>), total suspended solids (TSS), ammonia nitrogen (NH<sub>3</sub>-N), and *Escherichia coli*. Additional potential pollutants are included in the Domestic Technical Report 1.0, Section 7. Pollutant Analysis of Treated Effluent in the permit application package. Domestic wastewater is treated by an Existing Phase: The plant operates as an activated sludge wastewater treatment process to treat the wastewater prior to release into a stream. This process initiates at an extended aeration; the influent enters the Wastewater Treatment Plant through a bar screen, then to the oxidation ditch, the mixed liquor then flows to the clarifier, the RAS returns to the oxidation ditch via a lift-pump, the clear water flows to the chlorine contact chamber, and then is discharged. Sludge from the clarifier is sent to the drying beds with the operation of 2 valves

and the RAS pump. The dried material is removed from the drying beds and placed in a dumpster for disposal in a truck from Waste Management and hauled off to a registered land fill called Lacy Lakeview Landfill.

The plant discharges treated wastewater at a volume not to exceed an annual average flow of 60,000 gallons per day. The effluent discharges through an 8" pipe to Langford Branch; thence to Cowhouse Creek; thence to Belton Lake in Segment No. 1220 of the Brazos River Basin.

I appreciate your time and effort in reviewing my summary. If you have any questions, please contact me at (713) 458-8612, or via email at [robin@permittingservices.net](mailto:robin@permittingservices.net).

Yours truly,

Robin Butcko
