

KM Liquids Terminals LLC (CN603254707) operates the Kinder Morgan Galena Park West Chemical Facility (RN103137790), an existing liquid storage terminal owned and operated by Kinder Morgan. The facility is located at 1500 Clinton Drive in Galena Park, Harris County, Texas, 77547. The function of this facility is to store liquid hydrocarbons and liquid chemicals in above ground storage tanks. As required by TCEQ, the facility has applied to renew their existing wastewater discharge permit (WQ0001662000).

The facility proposes to continue discharging stormwater at an intermittent flow rate from Outfall 001 depending on the amount of rainfall and wastewater at a rate not to exceed 0.144 million gallons per day (MGD) from Outfall 002. Wastewater is generated at the plant when storage tanks and equipment are washed, and when the boiler (used to heat tanks) discharges blowdown. Stormwater is also discharged from the facility during rainfall events. Pollutants in the facility wastewater may include organic carbon, oil and grease, ammonia nitrogen, and zinc. The facility controls these pollutants by passing wastewater through a cartridge filter and carbon adsorption before it is discharged.
