Supplement to Application, Section 5 – Basis for Request for Extension of Deadlines for Commencing and Completing Construction of Reservoir Project under Certificate of Adjudication No. 12-4031(A)

“Reasons Why Construction Work Could not be Commenced or Completed”

Under Certificate of Adjudication No. 12-4031A (the “Certificate”), the Palo Pinto County Municipal Water District No. 1 (the “District”) is authorized to enlarge Lake Palo Pinto by constructing the new Turkey Peak Dam (the “Project”). The purpose of the Project is to restore and further increase the previously authorized water storage capacity in Lake Palo Pinto by 5,692 acre-feet, for a new total of 49,792 acre-feet. The Certificate originally required construction to begin within two (2) years of Certificate issuance and be completed within five (5) years of Certificate issuance. The Texas Commission on Environmental Quality (“TCEQ”) has granted the District’s prior requests for an extension of time, and the current deadline for commencement of construction on the Project is October 12, 2025, with such construction required to be completed no later than October 12, 2028.

While the District has not yet commenced construction, the District’s actions in these past two years demonstrate that it has been advancing the Project with more than sufficient due diligence and that reasonable cause exists for such delay in commencing construction, as required under 30 Texas Administrative Code § 295.72(b). Per TCEQ regulations, “reasonable diligence does not require unusual or extraordinary effort, but it does require a steady application of effort that is usual, ordinary, and reasonable under the circumstances and evidences prosecution of such efforts in good faith.” Here, since TCEQ approval of the District’s most recent extension request, the District has been continuously taking critical, meaningful steps and making significant progress toward commencing construction of the Project, which is imminent.

Specifically, the District has and is engaged in activities critical to the commencement of construction of the Project. Such activities include acquisition of land necessary for the Project from both private and public landowners, completion of final design activities, implementation of a mitigation plan, conducting a cultural resources investigation, advertising the Project, and soliciting bids for construction. Since TCEQ approval of the last extension request, the District has continued implementation activities for the Clean Water Act Section 404 Mitigation Plan (“Mitigation Plan”), including conservation easement planning on downstream Palo Pinto Creek and upstream habitat management, monitoring, and coordination. The District has also engaged in (i) pre-construction aquatic life monitoring and water quality sampling in Palo Pinto Creek for fulfillment of Section 404 permit requirements, (ii) performed

pre-construction golden-cheeked warbler surveys and coordinated results with the U.S. Army Corps of Engineers (“USACE”) and U.S. Fish and Wildlife Service to obtain a biological opinion and subsequent Section 404 permit modification letter dated June 9, 2025, and (iii) advanced hydraulic and hydrologic analyses and design for the low-head dam modification, as specified in the final Mitigation Plan. With regard to cultural resources, the District has coordinated revised research design for eligibility testing with USACE and the Texas Historical Commission and conducted Phase II Cultural Resources Investigation activities, including geoarchaeological investigations, hand excavations for eligibility testing, artifact analysis, and updates to site forms and draft reports on the eligibility testing investigations. In addition to these activities, the District has coordinated with multiple other stakeholders regarding the Project, including the Texas Department of Transportation, Texas Water Development Board, and Palo Pinto County and State officials. The District has also secured the significant, necessary funding to undertake the construction of the Project.

Each of these activities is a usual, ordinary, and reasonable aspect of a new dam/reservoir project, and all of these steps are necessary prerequisites to breaking ground on commencing construction of the dam itself. These accomplishments demonstrate a good faith effort by the District to construct this much-needed Project in this often drought-stricken regional area, as contemplated by the Texas Water Development Board’s Regional Water Plan for Region G. Documents demonstrating these accomplishments can be provided upon request. The District appreciates the TCEQ’s consideration of this Application and will continue using its best efforts to timely complete this critical Project within the requested deadlines.
