

Savings the Size of Texas from Your Lawn and Garden

Everything's big in Texas. But no one likes big water bills. By taking a few simple steps, you can use less water in the future—saving you money and helping to keep our Texas water plentiful.

Use a licensed irrigator.

Licensed irrigators have been trained to design, install, maintain, alter, and repair your irrigation system in ways that will conserve water and keep our supply healthy for everyone. To find a licensed irrigator, go to www.tceq.texas.gov/goto/irrigator.

Keep a copy of the design plan.

All irrigation systems installed since January 1, 2009, will have an irrigation plan. If you need a repair, the plan will reduce the time it takes—saving you money.

Use your watering schedule.

Your grass and plants have different watering requirements during the year. Your licensed irrigator has provided a seasonal watering plan to help reduce the amount of water you use.

Maintain your irrigation system.

Your licensed irrigator has recommended steps you can take to keep your system operating correctly—things like trimming plants or grass and changing filters will keep your yard healthy and save you money.
