## TEXAS COMMISSION ON ENVIRONMENTAL QUALITY PETROLEUM STORAGE TANK PROGRAM CAP WORKSHEETS

## **Date Prepared:**

DUAL PHASE EXTRACTION (DPE)										
Facility Name:				LPST ID No.:						
Facility Address/City:				CAPM:						
Facility County:				RCAS:						
Facility ID No.:				P.E.:						
TCEQ Region:	TCEQ Region:				Prepared By:					
Please refer to the appropriate section in the EPA CAP Manual for definitions, equations and tables to assist you when completing these worksheets. When supplying the information requested below, please make certain that any calculations and methodology used to arrive at the value or conclusion you have entered is included in the CAP. This document must not be altered in any manner.										
SOIL/GROUNDWATER CHARACTERISTICS										
Hydraulic Conductivity K (m/ sec) obtained by:										
Feasibility Test Laboratory Analysis					Other:					
Hydraulic conductivity K < 10 <sup>-9</sup> (m/sec)?							YES		NO	
Average depth to water ≤ 3 ft?							YES		NO	
Soil water content ≥ 85%?							YES		NO	
Soil water content obtained by:		Laborator	y Analy	ysis		Other:				
If the answer to any of the questions above is <b>yes</b> , DPE is not likely to be effective and needs further evaluation.										
CONSTITUENT CHARACTERISTICS										
Non-aqueous phase liquid (NAPL) type released:	Gasoline Diese			1	O.	ther:				
Do any of the target COCs present have a vapor pressure < 0.5 mm Hg?							YES		NO	
Do any of the target COCs present have a boiling temperature $> 250^{\circ} - 300^{\circ}$ C?						oo°C?	YES		NO	
Do any of the target COCs present have a Henry's Law constant < 100 atm?						1?	YES		NO	
If the answer to any of the questions above is <b>yes</b> , the SVE component is not likely to be effective.										

FEASIBILITY TEST									
Feasibility test duration (hrs): Method:				One pump		Two pump			
DPE test well construction									
Diameter:	Total Depth:		Screen Interval:		Depth to Water:				
Observation well construction	Observation well construction								
Diameter:	Diameter: Total Depth:				Dept Wate				
Additional information:  Interval:  Water:									
Observed SVE radius of influe	ence (ft):		Observed r	naximum airflow r	ate (sc	fm):			
Vacuum at the vacuum source when generating the maximu	Vacuum at the DPE well head (H <sub>2</sub> O") when generating the maximum airflow rate:								
Vapor concentrations* (mg/n	n³) - During tes	st	Groundwa	ter concentrations*	f (mg/	L)			
*Use this format for data entry: XXX mg/m³ or mg/L (MW-1), XXX mg/m³ or mg/L (MW-2), XXX mg/m³ or mg/L (MW-3), etc.									
Benzene:	Benzene:								
Ethylbenzene:			Ethylbenzene:						
Toluene:	Toluene:								
Xylenes:	Xylenes:								
TPH:	TPH:								
MTBE:	MTBE:								
Vapor Recovery Rate (lbs/hr)	Groundwater Recovery Rate (lbs/hr):								
Observed groundwater pumping/ extraction radius of influence (ft):			Average groundwater pumping/ extraction rate (gpm):						
Observed maximum drawdown in the test well during DPE testing:									
REMEDIATION SYSTEM DESIGN									
Target concentrations:									
DPE well construction									
Diameter:	Total Depth:		Screen Interval:		Depth to Water:				
SVE well construction									
Diameter:	Total Depth:		Screen Interval:		Dept Wate				
The design of the DPE wells must be the same diameter size as the DPE feasibility test well.									
Designed drawdown in the DPE well(s) (ft):			Designed radius of influence for ground- water in pumping/extraction well(s) (ft):						
Designed vacuum at the DPE well head (H₂O"):			Designed radius of influence for SVE well(s) (ft):						
Area of plume above the target concentrations (ft²):			Number of DPE wells:						

REMEDIATION SYSTEM DESIGN (cont.)											
Nun	Number of SVE-only wells:					Designed pumping rate per well (gpm):					
Tota	Total designed pumping rate (gpm):					Designed airflow rate per well (scfm):					
Total airflow rate (scfm):					Estimated hydrocarbon mass at startup (lbs):						
Total recovery rate at startup (lbs/hr):				]	Estimated cleanup time (years):						
Estimated total recovery rate in final year (lbs/hr):					Estimated final hydrocarbon mass remaining (lbs):						
Gro	Groundwater treatment method:				Air Stripper			Carbon Absorption System (CAS)			
Gro	undwater treatn	nent unit capac	ity:	·				·			
Vapor treatment method:											
	Thermox Catox					ernal Combustion gine (ICE)		Carbon Absorption System (CAS)			
Vap	Vapor treatment unit capacity (scfm):										
Remediation system component utility requirement:											
	Electricity voltage (volts):					Gas pressure (psi):					
Utility supplied at the site:											
	Electricity voltage (volts):					Gas pressure (psi):					
Is a telemetry unit included?					YES NO						
Permit requirements:											
OPERATION, MONITORING AND PERFORMANCE (OMP) PLAN											
Does OMP Plan include daily monitoring for the start-up ph						e (up to 7 days)?	(up to 7 days)? YES		NO		
What is the scheduled frequency of long term monitoring?  Weekly					Monthly	Oth					
Whi	Which of the following will be included in the OMP Plan?										
	BTEX	ТРН	Other:								
CLOSURE PLAN											
Does the closure plan include the following?											
	Confirmation of target Submissi concentrations request				ion of site closure			Removal of equipment			
	Plugging of wells Waste dis				posal Paving/resurfacing				rfacing		
	Deed Recordation Institutional				al Co	Controls
