| <b>3</b> The total MCL for trihalomethanes (bromodichloromethane, bromoform, chloroform, and dibromochloromethane) is 0.08 mg/L.                                                                                                                                                                                                                                                                                                                                              |     |                                          |                                              |                                          |                                              |                                                                                     |                                                                               |                                                                                     |                                                                               |                                          |                                              |                                          |                                              |                                                                                     |                                                                               |                                                                                     |                                                                               |
| * These compounds are not necessarily of concern from a human health standpoint, therefore calculation of human health-based values is not required. However, aesthetics and ecological criteria would still apply. See table entitled "Compounds for which Calculation of a Human Health PCL is Not Required" available on the TCEQ website at <a href="http://www.tceq.state.tx.us/remediation/trrp/trrp.html">http://www.tceq.state.tx.us/remediation/trrp/trrp.html</a> . |     |                                          |                                              |                                          |                                              |                                                                                     |                                                                               |                                                                                     |                                                                               |                                          |                                              |                                          |                                              |                                                                                     |                                                                               |                                                                                     |                                                                               |

| <b>*</b> These compounds are not necessarily of concern from a human health standpoint, therefore calculation of human health-based values is not required. However, aesthetics and ecological criteria would still apply. See table entitled "Compounds for which Calculation of a Human Health PCL is Not Required" available on the TCEQ website at <a href="http://www.tceq.state.tx.us/remediation/trrp/trrp.html">http://www.tceq.state.tx.us/remediation/trrp/trrp.html</a> . |           |                                                 |                                                  |                                                   |                                                                    |                                                                   |                                                 |                                                  |                                                   |                                                                    |                                                                   |                                               |                                                   |                                               |                                                   |

**Footnotes**

**1** Based on primary MCLs when available

**2** 100 x <sup>GW</sup>GW<sub>Ing</sub>

**3** The total MCL for trihalomethanes (bromodichloromethane, bromoform, chloroform, and dibromochloromethane) is 0.08 mg/L.

\* These compounds are not necessarily of concern from a human health standpoint, therefore calculation of human health-based values is not required. However, aesthetics and ecological criteria would still apply. See table entitled "Compounds for which Calculation of a Human Health PCL is Not Required" available on the TCEQ website at <http://www.tceq.state.tx.us/remediation/trrp/trrp.html>.

NA = not applicable

All values capped at 1E+06

This table shows the commercial and industrial risk-based exposure limits for soil and groundwater with carcinogenic and non-carcinogenic values depicted.

For questions on toxicity factors, contact the Toxicology Division at 877-992-8370.

## Footnotes

- The general hierarchy of the sources for the toxicity factors is: USEPA Integrated Risk Information System (IRIS); USEPA Provisional Peer Reviewed Toxicity Values (PPRTVs); USEPA Health
- U.S. EPA 2005 carcinogen guideline class descriptors: CH = carcinogenic to humans; LC = likely to be carcinogenic to humans; SEC = suggestive evidence of carcinogenic potential; NLC = not
- Reference (Ref): A = ATSDR chronic MRL; CU = Cornell University Pesticide Management Education Program; EPA-OP = EPA Office of Pesticide Programs; H = HEAST, July, 1997; I = IRIS; MA
- The first value represents the toxicity value to be used for evaluating all residential and commercial/industrial soil pathways for cadmium; the second value represents the toxicity value to be
- The RfC value is considered protective of the carcinogenic effects of formaldehyde due to inhalation based on the TCEQ Development Support Document for Formaldehyde posted August 7,
- The first value represents the toxicity value to be used for evaluating all residential and commercial/industrial soil pathways and all commercial/industrial groundwater pathways for manganese;
- Site-specific PCLs for mercury may vary based on the pH-dependent K<sub>d</sub> value (see Figure:30 TAC §350.73(f)(1)(C)). Persons should use the Tier 1 pH 4.9-based PCLs unless a site-specific soil pH > 6.8 is demonstrated with site-specific soil samples.
- Compound with CAS# 104-35-8 nonylphenol ethoxylate in 2006 tox-trrp table has different CAS# 9016-45-9 nonylphenol ethoxylate beginning in the 2010 toxicity factors table.
- These compounds, acetic acid, ammonium polyphosphate, ammonium salts, calcium, chloride, ethylene, hydrogen chloride (hydrochloric acid), iron, limonene, d-, magnesium, phosphorus,

**SFo** - Oral Slope Factor

**RfC** - Inhalation Reference Concentration

**RfDo** - Oral Reference Dose

**URF** - Inhalation Unit Risk Factor

This table shows the toxicity factors used to calculate protective concentration levels.

### Footnotes

\* These compounds are not necessarily of concern from a human health standpoint, therefore calculation of human health-based values is not required. However, aesthetics and ecological criteria would still apply. See table entitled "Compounds for which Calculation of a Human Health PCL is Not Required" available on the TCEQ website at <http://www.tceq.texas.gov/remediation/trrp/trrppcls.html>.

**s** - compound solid at @ 20 oC

**I** - compound liquid at @ 20 oC

**g** - compound gaseous at @ 20 oC

**H'** - Dimensionless Henry's Law Constant H' = H x 41.57 @ 20 oC (cm<sup>3</sup>-H<sub>2</sub>O/cm<sup>3</sup>-air)

**H** - Henry's Law Constant (atm-m<sup>3</sup>/mole)

**MW** - Molecular Weight (g/mole)

**K<sub>oc</sub>** - Soil organic carbon-water partition coefficient (cm<sup>3</sup>-H<sub>2</sub>O/g-Carbon)

**K<sub>d</sub>** - soil-water partition coefficient (cm<sup>3</sup>-H<sub>2</sub>O/g-Soil)

**D<sub>air</sub>** - Diffusion coefficient in air (cm<sup>2</sup>/s)

**D<sub>wat</sub>** - Diffusion coefficient in water (cm<sup>2</sup>/s)

**K<sub>ow</sub>** - Octanol-water partition coefficient (cm<sup>3</sup>-H<sub>2</sub>O/cm<sup>3</sup>-Octanol)

**Br<sub>abg</sub>** - Soil-to-above ground plant biotransfer factor (g soil/g plant tissue dry weight)

**Br<sub>bg</sub>** - Soil-to-below ground plant biotransfer factor (g soil/g plant tissue dry weight)

**Type** - O: Organic, I: Inorganic, M: Metal, OA: Organic Acids

**CE** - Not found, Can not estimate

**NA/reacts** - Not applicable because reacts with water

This table shows the chemical and physical properties used to calculate protective concentration levels.

## Footnotes

1 Glyphosate - Koc under review. Contact your TCEQ Project Manager for assistance if glyphosate is a chemical of concern.

\* As listed in Figure: 30 TAC §350.73(f)(1)(B)

This table shows the carbon-water partitioning coefficient for select chemicals of concern based on pH values.

## Footnotes

\*Acetic acid; Ammonium polyphosphate; Ammonium salts; Calcium; Chloride; Ethylene; Hydrogen chloride (hydrochloric acid); Iron; Limonene, d-; Magnesium; Phosphorus, total; Potassium; Sodium; Sulfate; Sulfide; Sulfur. These compounds are not necessarily of concern from a human health standpoint, therefore calculation of human health-based values is not required. However, aesthetics and ecological criteria would still apply. See table entitled "Compounds for which Calculation of a Human Health PCL is Not Required" available on the TCEQ website at <http://www.tceq.texas.gov/remediation/trrp/trrppcls.html>.

This table show gastrointestinal and dermal absorption values used in calculating protective concentration levels.

**For questions on toxicity factors, contact the Toxicology Section at 877-992-8370.**

## Footnotes

**1** 2005 carcinogen guideline class descriptors: LC = likely to be carcinogenic to humans; SEC = suggestive evidence of carcinogenic potential; NLC = not likely to be carcinogenic to humans; IIACP = inadequate information to assess carcinogenic potential. These descriptors may be specific to the exposure pathway for which a carcinogenic toxicity factor was developed.

**2** Reference (Ref): A = ATSDR chronic MRL; CU = Cornell University Pesticide Management Education Program; EPA-OP = EPA Office of Pesticide Programs; H = HEAST, July, 1997; I = IRIS; MA DEP = Massachusetts Department of Environmental Protection; N = NCEA; NYSDOH = New York State Department of Health; OEHHHA = Cal/EPA Office of Environmental; PPRTV = EPA Provisional Peer Reviewed Toxicity Value; T = TCEQ Toxicology Division.

**3** RS-ESL values have been rescinded by the Toxicology Division as more scientifically rigorous methods are available for the derivation of inhalation toxicity factors which impact the setting of regulatory standards (i.e., TRRP PCLs). Consequently, there are no RS-ESLs to serve as a source of inhalation toxicity factors for TRRP, and RS-ESLs have been removed from the Toxicity Factors table. Any newly developed inhalation values by the Toxicology Division will not be differentially termed as "RS-ESLs," but will be referred to as an RfC or URF (with "T" noted as the source for the Toxicology Division) and undergo a more scientifically rigorous derivation process. If inhalation may be the driving exposure pathway for a chemical in a particular instance (e.g., groundwater-to-air or subsurface-soil-to-air for class 3 groundwater) but no inhalation toxicity factors are listed in the TRRP Toxicity Factors table, then contact the TCEQ to request that an inhalation toxicity factor and PCLs be derived. See the general process for requesting a PCL at <http://www.tceq.texas.gov/remediation/trrp/pclrequests.html>.
