

iBDIL Comparison Values

Chemical(s)	iBDIL for DUVAS & SIFT (ppb)
Benzene	80 ^a
1,3-Butadiene	40 ^a
Ethylbenzene	350 ^b
Styrene	60 ^a
Toluene	70 ^a
Xylenes + Ethylbenzene	60 ^a

Exceedances of instantaneous baseline derived investigation levels (iBDIL) indicate concentrations that are higher than typical background levels for those chemicals and would necessitate further investigation for a source of the chemical. They are all set below levels that trigger actions based on concerns for health effects.
