2024 Texas Integrated Report - Index of Water Quality Impairments

General Information:

Category 4: *Impairments that are not suitable for a TMDL or for which a TMDL has already been approved.*
Category 5: *Impairments which may be suitable for development of a TMDL (303(d) List).*

Explanation of Column Headings:

SegID and Name: *The unique identifier (SegID) and name of the water body. Items may be one of three types of numbers for SegID. The first type is a classified segment number (4 digits, e.g., 0218), as defined in the Texas Surface Water Quality Standards (TSWQS). The second type is an unclassified water body (e.g., 0218A), not defined in the Standards and associated with a classified water body because it is in the same watershed. The third type includes special Segments for Oyster Water Use (e.g., 2421OW) and Beach Watch Use (e.g., 2481CB) special areas.*

AU ID: *Identifies the assessment unit (AU_ID, six or seven digits, e.g., 0101A_01) and describes the location of the specific area within a classified or unclassified water body for which one or more water quality standards are not met.*

Parameter(s): *Pollutants or water quality conditions that assessment procedures indicate do not meet assigned water quality standards.*

Category: *One of seven subcategories assigned to each impaired parameter to provide information about water quality status and management activities on that water body. The categories are defined below:*

Category 4: Available data and/or information indicate that at least one designated use is not being supported or is threatened, but a TMDL is not needed.

- **Category 4a:** A state-developed TMDL has been approved by EPA or a TMDL has been established by EPA for any water-pollutant combination.
- **Category 4b:** Other required control measures are expected to result in the attainment of an applicable water quality standard in a reasonable period of time.
- **Category 4c:** The impairment or threat is not caused by a pollutant.

Category 5: Available data and/or information indicate that at least one designated use is not being supported or is threatened, and a TMDL is needed.

- **Category 5a:** A TMDL is underway, scheduled, or will be scheduled.
- **Category 5b:** A review of the standards for the water body will be conducted before a management strategy is selected.
- **Category 5c:** Additional data and information will be collected or evaluated before a management strategy is selected.
- **Category 5n:** Water body does not meet its applicable Chl a criterion, but additional study is needed to verify whether exceedance is associated with causal nutrient parameters or impacts to response variables.
- **Category 5r:** A WPP is under development or accepted by EPA for this parameter.

Carry Forward: *Some previously listed impairments did not have adequate data to re-assess in 2024 and were carried forward from 2022 and remain impaired.*

Segment ID	Segment Name	AU ID	Parameter	Category	Carry Forward
0101A	Dixon Creek	0101A_01	Depressed dissolved oxygen in water	5c	T
			Selenium in water	5c	T
0102	Lake Meredith	0102_01	Chloride in water	5c	F
			Mercury in edible tissue	5c	F
