

Appendix C of the 2022 Texas Nonpoint Source Management Program Updated with information from 2024 IR and SI waters as of January 2025

NPS Priority Watersheds Report June 2025

[2024 Texas Integrated Report - Index of All Water Quality Impairments](#)

SI - Special Interest – indicates a water body which is not impaired but is targeted for protection activities.

- **Category 4a** – Water bodies with a state-developed TMDL that has been approved by EPA.
- **Category 4b** – Other required control measures are expected to result in the attainment of an applicable water quality standard in a reasonable period of time.
- **Category 4c** – The impairment or threat is not caused by a pollutant.
- **Category 5a** – Water bodies that have a TMDL underway, scheduled, or to be scheduled.
- **Category 5b** – Water bodies that require a review of their water quality standards before a management strategy is selected.
- **Category 5c** – Water bodies that require additional data and information to be collected or evaluated before a management strategy is selected.
- **Category 5n** – Water bodies that do not meet their applicable chlorophyll-a criteria, but additional study is needed to verify whether this exceedance is associated with causal nutrient parameters or impacts to response variables.
- **Category 5r** – A WPP is under development or accepted by EPA for this parameter.
