

## Response to Public Comment:

### Two Total Maximum Daily Loads (TMDLs) for Indicator Bacteria in Chocolate Bayou

Tracking Number	Date Received	Affiliation of Commenter	Summary of Request or Comment	Summary of TCEQ Action, or Explanation
001	11/13/23	Dick Tyson, Local Resident	The commenter expressed support for the TMDL project but explained that he believes Mustang Bayou should be included in this project because it makes a large impact on the Chocolate Bayou watershed.	<p>TCEQ appreciates support for this TMDL.</p> <p>There is a separate TMDL project for Mustang Bayou that is currently under development. However, Mustang Bayou and Chocolate Bayou, along with Halls Bayou, will be included in a single Implementation Plan for the Chocolate Bay watersheds, due to their adjacency and common stakeholders. This single Implementation Plan will cover all three watersheds.</p> <p>No changes were made to the TMDL document based on this comment.</p>
