Implementation Plan for Bacteria in the Upper San Antonio Watershed

Tracking Number	Date Received	Affiliation of Commenter	Summary of Request or Comment	Summary of TCEQ Action, or Explanation
001	10/28/15	SAWS	<p>The commenter requests the deletion of the following two sentences on page 4, regarding waste load allocations: "Waste Load Allocations are more properly developed by applying the full permitted discharge volume and concentrations that achieve the Water Quality Standard. Updates to the Texas Water Quality Management Plan (WQMP) in 2009 and 2010 attempted to partially rectify this oversight by assigning Waste Load Allocations based on the full permitted discharge volume and concentrations that are one-half of the Water Quality Standard."</p>	<p>Discharge limit values have been incorporated into San Antonio Water System's latest permit therefore the two original sentences are no longer relevant to the TMDL Implementation Plan and were removed from the document.</p>
